Passes 91st Milestone on Life's Trail

"When I was born," wrote Ezra Meeker, of old Oregon trail fame, who last week celebrated the 91st anniversary of his birth, "30 miles of railroad comprised the whole mileage of the United States; now, how many thousand miles I do not know."

It was in the spring of 1852 that Ezra Meeker, a young man little past 20, with a young wife and baby and a steel-true partner, drove out of Eddyville, Iowa, in an immigrant wagon drawn by 4-year-old ox steers. Back under the stretched canvas there were eggs, there was butter, packed in flour; there was dried fruit and pumpkin, jerked beef and a demijohn. Evidently, the journey was to be long.

Not every homeseeker westward bound had prepared so wisely. Lack of fruit and of yeast laid low many a sturdy frame along the trail.

Just above the Omaha of today, the Missouri was crossed; not, however, without armed resistance to a sheriff's writ that would have protected the river's monopoly by two "official" scows, on which waited a solid phalanx of several hundred wagons. In that year there was an almost unbroken column of ox teams moving westward from Omaha—a column 500 miles long, with perhaps three loose head of stock for every head under yoke. Justice and law prevailed in that moving army, in the main, though no civil authority protected it.

West of old Fort Hall, on the upper Snake waters, not a wagon wheel had turned before 1843, save those of the Whitman cart. In that year a thousand settlers pushed on past Fort Hall and scattered in the northwest empire. In '45 the Hudson Bay company, jealous watch dog for the British claims, acknowledged the settlers' provisional government by paying taxes. The northwest was to be American, not British. "The ox team had done it," writes Ezra Meeker.

From the day he crossed the Missouri, in '52, to the year 1906—a period of 54 years—Mr. Meeker was never ill in bed, and today he retains much of his native vigor and enthusiasm, an optimistic and constructive citizen.

Civilized peoples build on the foundations of the past, which engender hope and ambition for the future. "As reverence for the past dies out in the breasts of a generation, patriotism wanes," he wrote. "With these thoughts in mind was under-

All Bargain Records Smashed!

It would be simply impossible to duplicate the bargains offered you in this advertisement—at any other mail order house or retail store. We mean every word of this. We **absolutely guarantee** to save you money. All we ask you to do is prove it **at our risk.** Just make your selections from the items listed below and let us send them for your approval. If not delighted with your choice and convinced that you have actually saved money buying from Sharood return the goods and you will not lose a penny. Nowhere else can you hope to make such savings. But we warn you not to delay! Order while our stocks last.

Send No Money With Order

Remember, you do not send us one penny with order, **but at these smashed prices we can not ship any order for less than $1.50.** Pick your bargains quick—for all the family. **Just send letter or postcard giving your name, address and the number of each article you want. Also be sure to state sizes and write plainly to avoid delay.** Pay nothing till goods arrive—then only the amazing bargain price and postage. Then thoroughly examine your selections—show to your family. If not satisfied, for any reason at all, return the goods and we refund your money promptly. Order what you want direct from this advertisement.

SHAROOD CO., Dept. 50 Minneapolis, Minn.

Men's Fine Dress Shoes

Wonderful quality, superb value, in men's blucher shoe of black soft gunmetal finished leather. Leather insole and extension oak outsoles. Perforated tips. Sizes 6 to 11. Wide widths.

$2.49 UP

GIVE SIZE

Order black by No. 50A674. Pay $2.49 and postage on arrival. Order brown by No. 50A675. Send no money. Pay $2.98 and postage on arrival. State size.

Order little boys' gunmetal blucher, similar to above, sizes 9 to 13½, by No. 50A596. Pay $1.79 and postage on arrival. Order same style for big boys, sizes 1 to 5½, by No. 50A589. Pay $2.19 and postage on arrival. Always mention size.

Men's Four-Buckle All-Rubber Arctics

$1.79

Order Quick

Guaranteed best quality all rubber 4-buckle hi-cut arctic for men. Made with double thick soles and seams reinforced. Snow excluding tongue. Furnished in men's sizes, 7 to 12. Wide widths. Sensational value. Send quick. Order No. 50A990. Send no money. Pay $1.79 and postage on arrival. State size.

MEN!—Don't Miss This

A smashing bargain in an all-felt hi-cut that will prove what wonderful values you get from Sharood. Men's 9½-inch high cut with thick felt soles and heels—warm felt lining—high cut felt top. Exceptionally durable and amazingly low priced here. Sizes, 6 to 11. Wide widths

$1.79

GIVE SIZE

SEND NOW

Order by No. 50A880. Send no money. Pay $1.79 and postage on arrival. Money back if not satisfied. Mention size wanted.

Wonder Bargain!

Don't fail to make this big saving on men's pure gum hip boot; friction lined; heavy corrugated sole and heel; guaranteed first quality. Made of the very best rubber. Usually retailed at $5. Sizes 6 to 14. Wide widths. No half sizes.

$2.79

Give Size.

Order by No. 50A949. Send no money. Pay $2.79 and postage on arrival. State size wanted.

Felt Top, Felt Lined Kid Comfort Shoe

Vamps of soft kid leather. Durable felt top and fleecy felt lining. Sturdy oak leather soles. Made over splendid roomy, comfortable last. Wide widths. Sizes 8 to 9.

$1.98

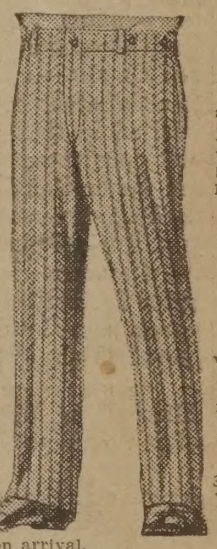
GIVE SIZE

Order by No. 50A407. Send no money. Pay $1.98 and postage on arrival. Money back if not satisfied. State size wanted.

Boys' Brown Storm Boots

Sensational value in heavy brown calf boots, treated to resist dampness and wear. Double oak soles, sewed and nailed, bellows tongue. Roomy last.

Order big boys' sizes, 1 to 6, by No. 50A570. Price $2.98. Order small boys' sizes, 9 to 13½, by No. 50A571. Price per pair, $2.49. State size.



$2.49 Up

Same style, barnyard proof 11-in cowhide hi-cut, for men. Sizes 6 to 12. Wide widths. Order by No. 50A770. Send no money. Pay $3.98 and postage on arrival. State size.

Gray Stripe PANTS

You have paid $4 for no better pants than this neat gray striped pattern. Suspender buttons. Belt loops, plain bottoms. Stoutly sewed waistband. Sizes, waist 30 to 42. Inseam 30 to 35.

$1.59

Order No. 50B1563. Pay only $1.59 and postage on arrival. Give your waist and inseam sizes. Order men's work pants of practical, narrow ribbed cordurov, same sizes as above, by No. 50B1566. Pay $2.98 and postage on arrival. Order men's extra heavy all wool Kersey pants, same measure as above, by No. 50B1559. Pay $3.98 and postage on arrival.

Order Men's Heavy Black and White Moleskin Cloth Work Pants, same sizes as above, by No. 50B1565. Send no money. Pay $2.98 and postage on arrival. Always mention sizes.

Strong Comfort Work Shoe for Men

$1.99

State size

Order your pair quick—while this bargain offer lasts. Wonderful work shoe for men. Has soft, strong uppers that resist barnyard acids. Solid leather insoles. All seams stitched with waxed thread. Strong leather soles. Wide widths. Sizes 6 to 11. Order by No. 50A758. Send no money. Pay $1.99 and postage on arrival.

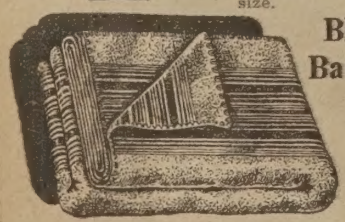
Genuine Kid Hi-Cut Shoe

$2.29

Wonderful quality genuine kid leather with cushion soles and rubber heels. All the features that make for comfort, yet very dressy in appearance. Sizes 3 to 9. Wide widths. Wonder value

State your shoe size on order. Order by No. 50A263. Send no money. Pay $2.29 and postage on arrival. State size wanted.

You Can't Beat This Bargain in a Warm Winter Coat for Girls



A typical Sharood value at positively the lowest price in America — Guaranteed. Material of this coat is an attractive, fancy mixture. Large collar and deep pockets inlaid with beaverized plush—a very stylish effect.

$3.98

All-around self-material belt enlivened with large button in back. Furnished in sizes 8 to 14. Order by No. 50E1742. Pay only $3.98 and postage on arrival. Order plush trimmed child's coat of heavy, durable material, sizes 2 to 6, by No. 50E1744. Pay $2.98 and postage on arrival. Give size.

Blanket Bargains

Serviceable silver gray, fancy bordered blankets of selected wool-finished cotton, closely woven. 3 popular sizes, 60x76 inch, No. 50B1750, price per pair, $1.79. 64x80 inch, No. 50B1751, price per pair, $2.29. 66x80 in., No. 50B1754. Price, per pair, $2.49. Send no money. Pay bargain price and postage arrival.

$1.79 Up

Medium Weight Cotton Sweaters

$1.09 Up

Practical style knitted from good grade cotton yarn. Shawl collar, 2 pockets. Sizes for men and women, 34 to 44.

Order women's gray style by No. 50C1410. Price $1.09. Order Men's gray style by No. 50C1400. Price $1.09. Order men's dark red by No. 50C1399. Price $1.39.

Same Style for Boys and Girls.

Sizes from 24 to 34 to fit ages 4 to 14. Order boys' gray style by No. 50C1420. Price 95c. Order girls' gray style by No. 50C1425. Price 95c. Order girls' dark red by No. 50C1426. Price, $1.39. Send no money with order. Pay bargain price and postage on arrival. Mention size.

Men's Startling Underwear Bargains

Men's Flat Fleeced Ecru Union Suits

Winter Weight

$1.19 UP

Good grade cotton yarn, soft fleeced inside; elastic rib cuffs and anklets. Sizes 34 to 46. Order by No. 50C1339. Price, each $1.19.

Men's extra heavy gray flat fleeced union suit. Fine quality cotton yarn, soft nap fleeced inside. Elastic ribbed cuffs and anklets. Sizes 34 to 46. Order by No. 50C1340. Price, each $1.49.

Men's elastic rib gray wool process union suit. Soft fleeced inside. Excellent wearing quality. Sizes 34 to 46. Order by No. 50C1341. Price each, $1.49. State size.

Men's heavy winter weight gray union suit. Knit from 50 per cent wool and cotton in wide rib with finish resembling wool. French neckband; good quality pearl buttons. Closed crotch, extra wide flap seat. Gray only. Sizes 34 to 46 chest. Order by No. 50C1344. Send no money. Pay $2.69 per suit and postage on arrival. Money back if not satisfied. State size wanted.

Popular Wing Tip Calf Model Black or Brown

$2.98

Growing girls' and women's black or brown calf English lace style. Fancy perforated wing tip. Goodyear sewed oak soles; rubber heels; smooth leather insoles. Softest pliable calf uppers; dressy and very serviceable. Sizes 2½ to 8, wide widths. State size.

Order black by No. 50A168. Order brown by No. 50A169. Send no money. Pay $2.98 and postage for either color on arrival.

For Good Farming, Attractive Country Homes and Happy Country People

Ask Investigation of Swift

Unfair Manipulation of Seattle Butterfat Price Charged

Alleging that Swift & Co. is attempting by unfair methods to gain control of the butter market of Seattle, a number of creameries and produce companies have forwarded to the federal trade commission at Washington, D. C., a petition asking for a federal investigation of the practices of that company. The petition is the result of inequality of butterfat and butter prices, the difference often varying as much as 10 cents in favor of butterfat. Accompanying the petition was a copy of a letter said to have been written by Swift & Co., offering 51 cents for butterfat when the market quotation was about 48 cents and when butter was selling for a few cents below 51 cents.

It is charged that the company is paying the higher prices in Seattle because of the strong competition of the independent creameries, while in other places where the competition does not exist or has been destroyed the prices are relatively much lower. The eight independent concerns that are asking the investigation express the belief that it is the purpose of the larger company to force them out of business through unfair competition. It is claimed that Seattle is the only town in which Swift & Co. operates where the price of butterfat is maintained above the price of print butter.

When asked by a representative of The Washington Farmer for a statement of his company's side of the case, a Swift & Co. representative declared that the prices paid were governed entirely by the demands of the market.

A letter accompanying the petition and signed by all eight protesting companies quoted figures on six cities to substantiate their claim that the accused company is manipulating the butterfat price in Seattle. The Swift & Co. prices for butter and butterfat in these cities are quoted in this letter as follows, the first figure being butter price and the second butterfat:

Seattle, 47 and 49 cents; Portland, 47 and 45 cents; Spokane, 47 and 46 cents; Salt Lake City, 44 and 37 cents; Boise, 45 and 41 cents; Butte, 44 and 40 cents.

Grain Growers Will Meet Soon

How is flour made? What is the relationship between the variety of wheat and the quality of the bread that can be made from it? All who know raise the right hand.

Those who do not know will have an opportunity to find out during the annual convention of the Washington Grain Growers', Shippers' and Millers' association, which will be held at Spokane January 26 and 27. W. T. Harshman, a milling chemist of Spokane, will give a demonstration of the baking qualities of flours from different wheat varieties and from blended wheats, and later those attending the convention will be taken through one of the flour mills in the city and given an opportunity to see wheat converted into flour.

Dean E. C. Johnson of the college of agriculture of the state college, president of the association, and Professor E. G. Schafer of the farm crops department of the college, secretary, have announced a partial list of the speakers who will appear on the program of the convention. Among the speakers will be President Alfred Atkinson of the Montana State college, who will discuss the subject of agricultural finance. J. K. McCornack, Spokane banker, will discuss the need of a better understanding between the wheat grower and the banker. Others who will discuss phases of farm finance will be George Greenwood of the Old National bank of Spokane and F. C. Forrest of the First National bank of Pullman.

The principal speaker of the evening session of the convention will be Governor D. W. Davis of Idaho, whose subject will be, "The Outlook for the Country Boy."

Dean E. J. Iddings of the college of agriculture of the University of Idaho will lead that portion of the program dealing with the general subject of diversified farming. Dean Johnson of the state college will deal with the underlying principles of agricultural progress. President W. B. Armstrong of the Washington State Farm bureau will present the subject of the farm bureau organization and its relation to the wheat farmer.

An especially interesting feature of the program will be the address by Professor George Severance of the department of farm management at the state college on the cost of producing wheat. He will review the figures on production costs secured by experiment stations and the United States department of agriculture in Washington, Idaho and other states. Walter J. Robinson, general manager of the Washington Wheat Growers' association, will discuss the subject of cooperation. The subject of tillage methods in the Big Bend country will be discussed by B. Gillespie, a prominent wheat grower of the Ritzville section.

Other formal addresses will be on the completed program, and all of the subjects will be thrown open for general discussion by those present.

Races Cannot Intermingle Safely

Commander Miller Freeman of Seattle, who has been active in opposing Japanese aggressiveness in this state, declares in a protesting letter to United States Senator Poindexter that "the people of this state are determined to keep this a white man's country if they have to fight for it. Unless the issue is met with courage immediately and definitely settled, it will certainly bring on war with Japan."

Mr. Miller explains that he is bringing this matter to the attention of Senator Poindexter because for many years the people of the Pacific coast have been told by the Roosevelt, Taft, Wilson and Harding administrations that they should leave the settlement of the Japanese question to the Japanese government.

He specifically charges that the agents of the federal government are remiss in their duty and are party "either directly or by acquiescence, to Japanese aggressions which constitute a formidable assault on our people and our country."

Among the specific instances cited by Mr. Miller are the leasing of lands on the Yakima Indian reservation by federal agents to Japanese; wholesale unlawful traffic in opiates by the Japanese; allowing Japanese to operate producing and marketing combinations with power to dictate prices to be paid white producers and prices to be paid by white consumers. Mr. Miller enumerates a number of other specific instances and says: "All of these are matters which the federal government alone can deal with."

It is thought that Senator Poindexter will bring this matter to the attention of Secretary Hughes and the other members of the American delegation at the armament conference—not in an offensive manner, but as a part of the broad, general relations between Japan and the United States.

These are matters which should be discussed in a candid, friendly way by the representatives of the two nations. If Japan has any counter grievances or accusations, she should be encouraged to present them in a full and frank way.

The fundamental purpose of the armament conference at Washington is to bring about a better understanding and to prevent the recurrence of war if possible, and it will not help matters to ignore the fact that the presence of Japanese in increasing numbers on the Pacific coast is a menace to the friendly relations between the two governments.

Mr. Freeman further charges that since President Roosevelt concluded the so-called "gentlemen's agreement" by which Japan, on her honor, agreed to keep her people out of this country, she has sent here on her passports more than 100,000 of her nationals under the guise of merchants, students, wives and so forth, who have become permanent residents.

If that is true, in whole or in part, it constitutes a grave menace to the maintenance of friendly relations between Japan and the United States. It is the presence of Japanese in the Pacific coast states that creates friction. If there were no Japanese here there would be slight danger of war between Japan and the United States. It follows that the greater the number of Japanese that are allowed to come to the Pacific coast states, the greater will be the friction between the two races.

The FARMER is not antagonistic to the Japanese people. On the contrary, it has high admiration for their virtues. We frankly say that many of our people could profitably go to school to the Japanese in such matters as industry, devotion to country, patience, cheerfulness and good manners. All of that, and more, can be ungrudgingly granted to the Japanese people, and still the fact remains that the two peoples do not assimilate and it is not best that they should be intermingled, whether in the United States or in Japan.

Our diplomatic negotiations at Washington should be conducted on the basis of not objecting to the Japanese as a people, but on the broad and apparent ground that it will be conducive to the peace of the two nations if there is not too much intermingling of the races.

There are about 150,000 Japanese in this country, and unless something definite is done their number will increase from year to year. THE FARMER is frank to say that the presence of 150,000 Americans in Japan would not be a desirable influence. It is simply a matter of keeping the two races well apart while allowing, at the same time, for a proper and reasonable exchange of commerce and opportunity for travel and study.

Mr. Miller has done well to bring this matter to the attention of Senator Poindexter. Our people want to be at peace with Japan, and the best way to maintain peaceful relations is for the statesmen of the two countries to be constantly alert, reasonable and friendly in their efforts to remove sources of friction.

To Make Profit

Cow Should Produce 300 Lbs. Fat

Does the average cow on the farm pay? How much milk must the average cow give to be worth her keep? What other feed must be fed with oat hay to give a balanced ration? Beet pulp seems to be the cheapest thing I can find. Alfalfa hay is expensive and has to be shipped in. Mill feeds are also too expensive. Please send me a balanced ration when using oat or wheat hay and straw. How would peas and oats be for summer pasture?

Colfax, Wash. J. E. A.

If the production of all the cows in the state of Washington were known it is probable that we would find that the average cow would produce about 4250 pounds of milk, testing 4 per cent fat, yielding 170 pounds of fat. If these figures are correct, or even approximate the the truth, it is safe to say that the average cow does not pay.

The writer has long been of the opinion that at the price of feeds and labor that have prevailed during the last 8 to 10 years in this state (excluding the two years of peak prices during the war and after) dairymen could not make the business pay unless their cows produced 300 pounds of fat or more yearly. To be sure, there are exceptions to this rule. Some farmers have cheap feed, others have low priced labor. Still others have both of these advantages. Such dairymen can probably make money with 200-pound cows. The average dairymen, however, paying average prices for labor and feed, must have 300-pound cows to make the business pay.

With good quality oat hay and dried beet pulp I would suggest that you feed all the hay the cow will consume, giving a change to wheat hay occasionally and the freedom of the strawstack at all times. Soak the beet pulp over night, using about three to four pounds of water to each pound of dry pulp. Feed from four to five pounds of the soaked pulp (dry weight) twice a day. Even though alfalfa and mill feeds are high, it will pay you to have some shipped in. Thus far your ration is one-sided. It needs some protein and I suggest that you mix mill run, three parts, and linseed oil meal, one part, or any other high protein feed you can get, and feed this at the rate of one pound of grain for each four pounds of milk produced. A change to alfalfa hay now and then would help keep the cows in better health and increase the milk flow. It pays to feed grain to good cows. Poor cows should be sent to the butcher.

Field peas and oats would make splendid green feed for summer use, but there would be so much wasted by tramping if pasturing were attempted that I do not believe it would be economical.

A. B. N.

Better Farm Life

Chief Problem of the Grange

By EDNA H. NORTON,

Lecturer, Yakima District Pomona No. 19.

"Our civilization rests at bottom on the wholesomeness, the attractiveness, as well as the prosperity of life in the country."—Theodore Roosevelt.

The grange as a national, state and community organization has before it untold possibilities in endeavoring to live up to this statement made by one of our greatest Americans.

The grange farmer is continually meeting and solving problems which make for the prosperity of the country, placing emphasis upon the improvement of crops, greater production, selling and marketing, storage problems and standardization of products, all of which are essential to rural improvement.

After all, a man's work is only a means to an end and that end is "life." The problem yet to be solved is not only better farm business, but better farm life, which, if we fail in obtaining, we truly fail. The intangible spiritual things in the end prove to be the real things in community life and it is these which the women of the grange are giving to the rural life of the nation, thus bringing about a true balance of forces, motives and methods, by laying emphasis not only on the economic, but educational, home-making, social, moral and religious element of each community.

This "farm life" problem—the real human side or true welfare aspect of agriculture—is of sufficient importance to require as much earnest thought and effort as we devote to increasing production and securing better prices.

Community improvement spells national improvement, and, is not the general welfare of 40,000,000 rural people of some consequence in our national life? Desire for these other things—education, recreation, good homes, books and reading, better schools and churches—is a wonderful stimulus to better farming and a sound rural civilization must have these things if it would have a secure foundation. Recognizing this, the characteristic feature of the grange, as compared with like organizations, is its insistence upon education.

For half a century the grange has maintained a lecture hour as a regular part of its proceeding at every meeting and requires reports of committees on education at every state and national meeting, believing that rural education goes beyond the maintenance of a good rural school system, its main task being to keep the entire community thinking, studying, discussing, growing.

In our communities, most of the leaders in such community interests as parent-teachers' association, school work, church work, boys' and girls' club work and farm bureau movement, are members of the grange. The grange is particularly interested in the boys' and girls' club movement and many of the project leaders are also leaders in the grange.

Both old and young need the social life which the grange affords and in this, too, the women of the grange must be leaders.

So we find the grange women filling their places, first in the home, the most important of our social institutions, developing physical efficiency and moral character which enrich community life.

In school, by working for a system of rural education that gives a sound foundation the making of good citizenship and high-minded men and women.

In recreation and social life, by securing a more adequate play life for all.

In moral and religious life, by maintaining highest ideals of character and service to God and fellow men.

Spokane County Bureau Meets

The annual meeting of the Spokane county farm bureau was held at Spokane December 29. A. C. Craig, orchardist of the Spokane valley, was reelected president; C. A. Carlson, Rockford, vice president, and T. S. Brown reelected secretary.

A constitutional revision was adopted that the board of directors shall consist of community leaders and project leaders, a total of 42 members. This board organized following the meeting by selecting the following to constitute the executive committee:

A. G. Craig, president, Otis Orchards.
C. A. Carlson, Rockford.
Mrs. Clayton Smith, Vera.
Mrs. T. L. Moad, Spangle.
R. B. Newell, Freeman.
C. A. Poston, Sunset.
H. W. Greenberg, Pleasant Prairie.

Who Shall Control Farm Bureau?

In a communication to the Iowa Homestead, County Agent N. G. Malin of Dubuque county reports that in many Iowa counties the farm bureau is having serious difficulty in maintaining its membership. Farmers are dropping the organziation and Mr. Malin says: "The cause must be sought in the organization. There must be something inherently wrong in it which does not meet with the approval of any great mass of people."

He recalls that in that state the farm bureau idea was promoted on the theory that the farmer needed a working organization to represent him and protect his interests in the world of trade. Then the organization was heavily subsidized by the federal government. An appropriation of $1800 per year was made to each county farm bureau by the federal government during the war period. Since that time the amount has been reduced to $600 per year.

Under the federal law the farm bureau became cooperative with the state agricultural colleges and the United States department of agriculture. Mr. Malin fears that federal influence may destroy the organization because of the inherent difficulties of such cooperation.

Complaint is heard that in many places the United States department of agriculture, working through the state agricultural colleges, is getting away from the primary purpose of the organization. As Mr. Malin puts it, "there have been many interpretations placed upon the law as to what cooperation means, and many efforts have been made to narrowly interpret the law to mean that the county agricultural agent could not engage in any activity with or for the farm bureau except extension work or purely educational work."

Under the terms of the law creating this corporation, the object of the farm bureau shall be to "encourage and develop the art and science of agriculture, horticulture, animal husbandry and domestic science."

Without wishing to be critical, but desiring to help constructively in putting the American farm bureau federation upon a still firmer footing, we can understand the viewpoint of the Iowa critic. It springs from a fear that the organization will become more and more weighted with the influence and domination of the department of agriculture and the agricultural colleges. There is a further fear that these powerful agencies will slip back into the old rut of putting too much thought, money and effort upon increased production and upon the mere social and domestic side of farm life, to the neglect of efforts for marketing reforms.

The Iowa county agent, Mr. Malin, urges the farmers of that state not to abandon the farm bureau. "Let us insist," he says, "upon a broad interpretation of its powers, and then let us demand that it shall function as our own organization, unhampered by any other influence." He declares that one thing is obviously necessary—"The hands of the farm bureau and the county agent must be untied. If in doing that it is necessary to dispense with the federal appropriation and rewrite our state law, then that should be done, and if the farm bureau shall be saved it is the belief of many that it must be done very soon."

The Washington Farmer takes note of this discussion because it believes that it is never wise to stifle criticism, but that in the end it will be far more beneficial to bring matters of controversy into the open for full and frank discussion.

Community Project Leaders

King county extension work will be carried on under a different plan from that used last year. Instead of having a project leader for each branch of work being undertaken in the county there is now a project leader in each community who is in touch with each branch of work being carried on in his territory. Once each month he meets at the county agent's office at Seattle and tells what is needed and reports on all work completed.

In this way the county agent is in very close touch with all communities. Plans can be outlined more completely and all branches of work can be covered more thoroughly.

Each community project leader becomes an ex officio member of the extension service advisory committee upon his election. There are more than 25 of these leaders and they have already outlined a heavy program for 1922. A. B. Nystrom, county agent, anticipates good results from this plan.

County Agent Cheers Himself

While making a short trip with one of the Western Washington county agents the subject of the long hours of travel on the country roads came up.

In this particular county there was much traveling to be done between the different towns and the county seat.

The county agent admitted that the hours did sometimes drag, but without another word he reached into his overcoat pocket and brought out a small mouth harp. He began to play a few popular refrains and to keep time with the rattle of the county Ford. The miles actually seemed to speed by faster and the destination was reached before we knew it.

"I have passed many a weary mile with this little harp," the county leader explained as he pocketed the instrument. "A fellow needs a lot of cheerfulness in this kind of work, and I never let a chance go by to give myself encouragement, as well as any one who might be riding with me."

Let Nothing Be Wasted

"What do you do with these?" asked a fruit grower, pointing to a great pile of cherry stems that lay in a cannery at Yakima. "They aren't any good to you, are they?"

"Well, we figure that they're worth about 12 cents a pound," replied the manager. "They're used in making medicine nowadays."

We wonder at times who it was that said there is nothing new under the sun. It looks as if, in the long run, the packing house will find a use for even the pig's squeal, the one part of his composition that is said to be still unutilized.

Encourage Stock Raising

Progressive breeders everywhere recognize the importance of interesting farm boys and girls in live stock, and frequently encourage live stock club work by selling animals for that purpose at a considerable reduction. One breeder of the northwest sold to a club member for $150 a heifer for which he had previously refused $250.

State Farm News

Yakima now has one of the best-known of the few remaining buffalo herds of the nation, the Conrad herd of Kalispell, which has become the Gibson herd of Yakima. The herd bull has been named Chief Yakima.

The one-time Conrad herd, numbering 90 animals and including about 20 yearlings, has been bought by the Yakima Meat company, of which O. D. Gibson is president. The Yakima concern butchered a few of the animals, which had already been contracted for the Christmas markets, but will turn the others out to graze on the Cowiche range. In time the owners expect to build up a herd that will rival the Leonard herd of Fort Pierre, which numbers more than a thousand animals.

* * *

The Cowlitz Produce company during the last few weeks has been foremost in shipments from Winlock to New York city. Following three carloads consigned to New York jobbers for the 10-day period from November 22 to December 1 this firm shipped three cars of eggs to New York. A new record in long-distance was established when the Cowlitz Produce company forwarded a small lot, 100 cases, to Honolulu.

* * *

A spinning wheel more than a hundred years old is on display at one of the shops in Sunnyside. It belongs to Andrew Ross, is a family heirloom and was used by his ancestors in New York. The wheel is made of ash and is in perfect running order.

* * *

Mrs. Mary E. Vassey, one of the pioneer sheep owners of the Yakima valley, recently sold all her sheep and range lands to a company of Spaniards, headed by Albert Sanches. The contract calls for the transfer of 3500 breeding ewes and 15 sections of grazing land.

For 20 years Mrs. Vessey has been in active management of her bands of sheep, visiting the camps and looking after the details of lambing, feeding and marketing.

* * *

Breads baked from flour made of all the leading varieties of wheat will be displayed and discussed as a novel feature of the program now being prepared for the meeting of Washington Grain Growers, Shippers and Millers' association at Spokane January 26 and 27.

* * *

R. P. Bean, superintendent of the Prosser Irrigation Experiment station, was one of the speakers at the growers' convention at the Yakima Potato and Corn show December 21. Mr. Bean says that the major portion of the farm will be devoted to general farming and conducted as an up-to-date farmer would handle it, while about 60 acres will be devoted to detailed experimental work. The farm produced 400 tons of alfalfa hay this year and 125 tons of silage. There are being fed this winter 1700 lambs and 50 steers on rations mostly grown on the experiment farm.

* * *

The branch of the Washington Cooperative Egg & Poultry association will be established at Yakima, according to action taken at a meeting of the board of directors at Seattle on December 20. The handling of the eggs of the members will be undertaken as soon as the local branch can be placed in shape for ousiness. A. S. Brown of Seattle will move to Yakima to take charge of the business.

* * *

Twelve carlots of his own apples were disposed of in West Virginia and Ohio by Homer A. Boggess of Fairview, who recently returned from the east. The cost for freight and other charges laid down in Wheeling, W. Va., was 76 1-2 cents a box and he sold them for a flat price of $2.50 per box. He found Yakima apples selling at $4 to $4.50 per box retail irrespective of grade, no difference being made between extra fancy and C grade by the merchants. Mr. Boggess feels well satisfied with the outcome of his trip. He found the farm bureau of assistance to him in placing his fruit with the farmers in Ohio.

* * *

Project leaders in the Selah community were reelected at a farm bureau membership meeting held recently. E. H. Powell is chairman; F. E. Fairbanks, project leader in horticulture; E. V. Taylor, live stock, and George Slade, poultry. The project of marketing was added with S. M. McKee in charge. John Dollenbacker will be assistant project leader in horticulture in charge of frost observations.

* * *

Karjola Brothers, poultrymen of Grays Harbor county, are erecting new henhouses on their poultry farm that will accommodate 6000 hens. This will make their plant one of the largest in the country. At the present time they have 2400 hens.

* * *

The neat little sum of approximately $8600 has been distributed among Yakima valley farmers and turkey raisers by G. I. Maggard, buyer for Swift & Co. of Seattle. Ten tons of turkey, or 20,000 pounds, were shipped to Seattle. Other live poultry, chiefly chickens, making a total of 7500 pounds, means a distribution of $1100 among the poultrymen of the valley. These purchases made by Mr. Maggard constitute the largest shipment of poultry ever taken out of the valley by him at any one time.

* * *

An estimated statement of productive income from farms in Lewis county, prepared by County Agriculturist C. R. Fowler, for 1921 shows a total of $4,630,302. The three largest items in the report include for the dairy industry, $1,298,600; for poultry, $1,286,000, and for cereals, $1,575,600. Poultry production has made the largest income growth during the year.

* * *

Final payments for 1921 beet crops were mailed December 15 by officials of the Utah-Idaho Sugar company to the beet growers of the Yakima valley. Checks sent out totaled $85,000, representing payments for beets brought to the factory since November 1.

During the present season the company has done a business of slightly more than $500,000 in the valley. Payments for beets amount to $210,000, labor employed has received $150,000 and about $150,000 has been paid for supplies.

W. F. Croft of Toppenish received the largest check going to any one individual, getting $1780. His neighbor, George Gang, came second with $1600. W. E. Curtis of Tieton, one of the few upper valley farmers going in for beet culture, got $1300, as did B. Hansen of Toppenish. William Yahn of Sunnyside drew $1250. As soon as this season's operations are thoroughly cleaned up the company will inaugurate campaign for acreage with a view of operating three plants next season instead of one, as was done this year.

WAS
v.46-47

FARM BUSINESS AND MARKETS OUTLOOK

The selling panic in the cattle markets is passed.

Hog prices have reached the highest point in two months.

Lighter receipts have enabled lamb prices to recover all their recent loss.

Foreign wool markets have recovered most of their losses during November and early December.

Slight improvement in the demand for wheat from mills and exporters.

Bran prices the highest in six months.

The Danish butter market has slumped badly.

GOVERNMENT GIVES GRAIN TO RUSSIA.

Within a few minutes after President Harding affixed his signature to the measure appropriating around $19,000,000 to buy foodstuffs for the relief of the starving Russians, the first purchase of 1,250,000 bushels of corn was consummated. Most of the money will be spent for this cereal and about 1,000,000 bushels a day will be taken until the fund has been exhausted. Some wheat and flour and perhaps other grains will be taken.

This new source of demand will be a factor in the market during the next few weeks and corn prices have already advanced about 3 cents as a result. This action on the part of the federal government is evidence of its desire to help out farmers through increasing the price of grain. This object was quite as prominent as that of relief to the unfortunates abroad.

PRICE CHANGES AT FARMERS' EXPENSE.

Farmers received the short end of the stick in the changes in price levels during November, as compiled by the bureau of labor statistics. Wholesale prices on farm products declined to only 14 per cent higher than in 1913, compared with 19 per cent higher in October. With the exception of last June this is the lowest month of recent years. Declines in wheat, cotton, rye, cattle, hogs, sheep and poultry were responsible for most of the loss.

While farm products were losing ground, two other important groups, fuel and lighting and building materials, which are already far too high measured by the general price level, advanced. Fuel and lighting are now 86 per cent and building materials are 97 per cent higher than in 1913. Cloths and clothing declined to 86 per cent higher than in 1913, but most of the other groups show little or no change.

FREIGHT RATE CUTS ON THE WAY.

Freight rate cuts on farm products are on the way, but to the farmer they seem to be loitering unnecessarily. The reduction, ranging from 13 to 21 per cent on grain and hay in western territory, has been postponed again to give the roads time to make up new schedules. The time limit, originally set for November 20, has been moved forward to January 7.

The voluntary reduction of 10 per cent announced by the roads on many farm products to apply to all sections of the country and to continue in effect until June 30, 1922, is to begin as soon after January 1 as possible. It is estimated that this reduction will save the farmers about $100,000,000 in freight bills in the six months' period.

CATTLE PANIC PASSES.

The selling panic which developed in the cattle market around December 15 to 20 has passed and decrease of around 30 per cent in the supply at 10 markets has made possible the recovery of a good deal of the loss in values. It is possible that many of the short-fed steers which usually do not put in their appearance until January and early February have been dumped upon the market a month ahead of time. Prices at Chicago on the bulk of medium and good steers reached the lowest level in 10 years. Most of the sales came within a range of $6 to $7.25 when the market was at the bottom, but reacted later to $6.50 to $8.

Some feeders took advantage of the slump to purchase fleshy steers for the feed lot. Sales to country buyers did not reflect the full decline noted in the market for fat steers and in some cases thin cattle were sold at prices higher than for those in decent killing condition. The margin for the feeder looks like a narrow one, although by the middle of February the market for fat cattle may move to a little higher basis, but only those with extremely cheap feed will find present feeder cattle prices attractive.

The behavior of the market during the last 10 days again demonstrated that the market for beef is highly sensitive to any oversupply, and also showed that the country has enough cattle in feed lots to furnish serious gluts from time to time when the movement is not well distributed.

The theory that light steers should be the aim of the producer is likely to receive a thorough test in the next three months, when the cattle taken out during the fall will be returned to market. The premium upon yearlings began to fade away after holiday needs had been satisfied, but it will still be a sound conclusion that any losses will be less than they would have been if heavy, fleshy feeders had been purchased instead of light stocks.

HOG MARKET UP AGAIN.

After declining to practically the low point of the season, the hog market turned upward again when receipts at the leading markets declined about 20 per cent and prices reached the highest point in two months. The big packers have opposed the advance, as they wish to bag the crop on a lower level of prices, allowing eastern shippers to take the lion's share of receipts at Chicago.

Nearly half of the winter packing season has passed and the market has shown striking absorbing ability. How the situation is going to work out during the winter and spring months depends largely upon the extent to which producers are holding back hogs to put on weight. Weights at Chicago in the fourth week of December ran nine pounds above the average for that season of the year.

Cold storage holdings of lard in the United States during November decreased about 7,000,000 pounds, compared with a decrease of about 11,000,000 in November, 1920. Exports of lard during the month were about 7,000,000 pounds less than in the same month a year ago. Holdings of frozen pork and cured hog meats, including those in process of cure, decreased about 5,000,000 pounds during November, compared with a decrease of about 46,000,000 pounds during the same month of 1920.

LAMB FEEDERS IN CLOVER.

Lighter receipts at the leading markets enabled lamb prices to recover all of their recent loss. The dressed lamb trade has begun to recover from its slump, due to a period of oversupply, which can not be repeated often, from the crop in feeders' hands and a buoyant wool market also is playing into the hands of lamb feeders.

Feeder lamb prices have advanced to a top of $10.75 at Chicago, a level which looks risky since fat lamb prices can't go much farther out of line with other meats. Good steer carcasses in New York are quoted at only $14 to $15 per 100 pounds, compared with $23 to $24 for good lamb carcasses at the same point.

HORSE MARKET OUTLOOK IMPROVES.

A light supply of horses at distributing markets has been absorbed without difficulty within the last week or two, although at rather low prices except for choice heavy drafters. Chunks selling at $125 to $165 at Chicago are not so hard to move as they were.

WOOL PRICES RISING EVERYWHERE.

Foreign wool markets have recovered most of their losses during November and early December. The last sale at Sidney closed at top levels for the year, while prices at Bradford, England, were about 10 to 15 per cent higher than the recent London auction. German buyers have been less active, but the British woolen goods export trade has improved and buyers from that country have been making extensive purchases of South American wools. Boston prices were fractionally higher last week.

The woolen goods trade in this country has a slightly more hopeful tone and opening prices upon heavyweight goods are not expected to show much, if any, decline. The census bureau reports a decrease of 3 per cent in number of hours of operation of wool textile machinery during November, but a slight decrease is not surprising since consumption during October amounted to 67,200,000 pounds in grease equivalent, compared with only 72,700,000 pounds in the best month of the post-war boom. Mills are buying wool to a limited extent, but much of the recent buying has been by dealers for speculation.

WHEAT ESTIMATE RAISED.

The revised estimates upon the wheat yields in the United States in 1921, 1920 and 1919 issued by the department of agriculture on December 28 showed a decided increase over estimates previously issued for these years. The revisions were based in part upon the census figures for 1919. The yield for 1919 was increased 34,000,000 bushels; for 1920, 46,000,000 bushels, and for 1921, 54,000,000 bushels. The final estimate upon 1921 shows 587,032,000 bushels of winter wheat and 207,861,000 bushels of spring wheat, a total of 794,893,000 bushels.

Superficially these figures may appear to weaken the position of the wheat market, but they show that domestic consumption of wheat, including farm disappearance, in the last two crop years was larger than heretofore calculated. In brief, it is necessary to increase the domestic consumption figures and on this basis the present domestic wheat situation shows up rather strongly. With practically 200,000,000 bushels of wheat exported up to the first of January and indications of about 65,000,000 bushels more wheat ground in the last six months than in the corresponding period of 1920, coupled with only a slight increase in the visible supply of flour, there is reason to believe that we have sent abroad about all the wheat we have to spare.

Revisions upon corn yields were much less drastic than expected. The 1921 crop was reduced 70,000,000 bushels to 3,081,251,000 bushels. The 1920 crop was reduced only 2,000,000 bushels, while the 1919 crop was reduced 42,000,000 bushels. Adding together the crop, the carry-over of old corn on farms and the visible supply on November 1, 1921, there is a total available supply of 3,382,000,000 bushels, or practically the same as on November 1, 1920. This makes a stronger showing for corn, compared with last year, than was expected.

Slight changes were made in the revision of estimates upon the oats yields in the last three years. The final returns for 1921 show 1,060,737,000 bushels.

Barley yields also were revised downward, the 1921 crop being placed at 151,181,000 bushels.

The rye crop was reduced from 64,332,000 bushels in the preliminary report to 57,918,000 bushels in the final returns. The flax crop was likewise reduced to 8,112,000 bushels.

The hay crop for 1921 was revised upward, the total for all hay being placed at 96,802,000 tons.

INCREASED FLOUR DEMAND EXPECTED.

Demand for wheat from mills and exporters improved slightly during the past week. Flour mills report numerous inquiries for flour for shipment after January 1 and after inventories are taken bakers and wholesale grocers are expected to increase purchases, which in turn should increase the wheat requirements of domestic mills. In spite of alleged slow demand, it appears that flour production since July 1 has amounted to 14,574,000 barrels, equal to 65,503,000 bushels, more than in the same period of 1920.

CORN MOVEMENT IS IMMENSE.

After two weeks of corn receipts of record proportions the movement has been almost cut in half. Many producers are waiting apparently for the freight rate reduction to go into effect. Cash demand broadened and the prospect of extensive purchases for Russian relief, together with increased foreign buying through regular channels, have brought about a moderate upturn in values.

The oat crop still labors under an excessive visible supply, but prices are showing more strength.

CASH GRAIN MARKETS.

The range of cash grain prices for the week ending December 28 were:

Chicago: Wheat—No. 2 hard, $1.13 1-4@1.15 1-2; No. 3 hard, $1.11 1-2@1.12 1-2. Corn—No. 2 mixed, 48 3-4@50 1-2c; No. 3, 47 1-2@49c; No. 2 yellow, 49@51c; No. 3, 47 1-2@51c; No. 2 white, 47 1-2@49 1-2c; No. 3 white, 47 3-4@49 1-2c. Oats—No. 2 white, 37@38 3-4c; No. 3, 33 3-4@36c; No. 4, 33 1-4@36c. Rye—90c. Barley—53@60c.

CLOVER SEED ADVANCES SHARPLY.

Light offerings were primarily responsible for a sharp advance in clover seed prices last week. Stocks at principal markets are small and sales made for December delivery have not been easy to fill.

Toledo, per bushel: Prime red clover, $13.60 1-4; prime alsike, $11.30; prime timothy, $3.12 1-2.

BRAN HIGHEST IN SIX MONTHS.

Bran prices at the leading milling centers are now the highest in six months. Stocks of bran for immediate shipment are not large, but increased operation of flour mills is expected in January and offerings of wheat feeds for January and February shipment are liberal. The best demand for tankage ever known at this season is reported.

Chicago—Bran, $24.50@25.50; standard middlings, $24.50@25; flour middlings, $27@28; cottonseed meal, 43 per cent, $45; 36 per cent, $40; hominy feed, $23; gluten feed, $34.65@36.65; old process oil meal, $47; tankage, $47.50@55.

FREIGHT CUTS HELP HAY MOVEMENT.

The reduction of about 15 per cent in freight rates in western territory which goes into effect by January 7 is expected to increase shipments of hay, as producers in some of the surplus sections have been waiting for this relief. Feeders and dealers have been delaying purchases, hoping to share in the benefit of the reduction. Whether buyers or sellers will obtain the greater advantage is still undetermined.

Prices per ton in car lots were as follows:

Chicago—No. 1 timothy, $20@22; standard and No. 1 light clover mixed, $19@20; No. 2 timothy, $18@19; No. 1 clover mixed, $17@20; No. 3 timothy, $17@20; sample hay, $12@16; threshed, $12@16; clover, $16@18; No. 1 to choice alfalfa, $17@25; No. 1 and No. 2 southwestern prairie hay, $15@17; Nebraska and South Dakota prairie, $15@17; rye straw, $15@16; oat straw, $13@14; wheat straw, $12@13.

FRESH EGG SUPPLY INCREASES.

Cold weather and the holiday trade seem to have increased demand for eggs to some extent, but the supply of fresh eggs seems to be increasing, as it usually does in January. Receipts at the four leading cities are running materially larger than at the same season last year. Nevertheless, steady inroads are being made upon cold storage holdings, which now total 803,251 cases at these points, compared with 501,487 cases on the same date last year. The final report on cold storage holdings for the entire United States as of December 1 was practically identical with the preliminary report. Cold storage holdings of frozen poultry in the United States on December 1 amounted to 65,145,000 pounds, compared with 49,045,000 pounds on December 1 last year. Stocks increased 30,268,000 pounds during November, compared with an increase of 18,972,000 pounds in November, 1920.

Chicago—Fresh firsts, 48@49c; seconds, 42@44c. Poultry: Hens, 25c; springs, 25c; roosters, 16c; ducks, 28c; geese, 26c; turkeys, 40c.

DANISH SLUMP AFFECTS BUTTER.

The Danish butter market slumped badly and quotations on butter delivered to this country have been very low. One shipment of about 4000 casks of Danish, another of 2800 boxes of New Zealand butter arrived at New York and large purchases at prices ranging from 40 1-2c down to 36c delivered at New York, duty paid, were reported. This competition depressed eastern markets below Chicago on top scores. In addition, about 32,000 boxes of New Zealand and Argentine butter are expected at San Francisco and Vancouver between now and the

(Continued on page twenty.)

Little Journeys to Market

THE CHICAGO MERCANTILE EXCHANGE.

The Chicago Mercantile Exchange is one of the leading produce exchanges upon which butter, eggs and cheese are bought and sold. It furnishes a meeting place where members gather to transact business under certain prescribed rules as to amounts, grading and delivery.

The trading room is fitted up with blackboards upon which transactions are posted, and with telephone booths by means of which butter and egg concerns are able to keep in touch from their central offices with what is doing on the exchange floor. Bulletin boards carry information as to receipts at Chicago, supplies in storage, comparative prices and similar information for other important butter and egg markets.

For both butter and eggs, two "calls" are held during the morning of each business day. The first consists of offerings for "spot" or immediate delivery and also for delivery in 10 days. The second consists of offerings for future delivery longer than 10 days away. Trading in the latter is usually confined to certain specified months, as butter for January delivery and eggs for February delivery. These transactions are in carlots and in definite grades, such as "refrigerator standards" in eggs, and "fresh standards," "storage standards," "fresh extras" and "storage extras" in butter.

When the call starts the sellers state the number of cars they wish to sell and the asking price. These are posted as they are announced and bids also are placed on the board. When bids and asking prices agree the transaction is closed. Either bids or offers can be withdrawn any time before they are accepted. Scores of cars may change hands in this way in the course of a few minutes' trading. Every transaction is backed by warehouse or inspection certificates.

Figures on Milk Costs

Result of State College Investigations in Western Washington

SECOND ARTICLE.

The following tables are taken from figures furnished from the results of state college investigations into the cost of producing milk in western Washington. Table 3 summarizes all items of expense and returns other than milk from 449 cows on 35 farms of Pacific county.

TABLE III.

Items.	Per Cwt. Milk.	Per Cow.
Feed—Grain	$ .3369	$ 20.664
Hay	.6562	40.243
Silage	.0764	4.686
Roots and kale	.0425	2.606
Pasture, soiling	.3400	20.852
Bedding	.0286	1.755
Labor—Man	.7898	48.433
Labor—Horse	.0334	2.049
Use of bull	.1323	8.118
Use of buildings	.1819	11.153
Use of equipment	.0502	3.083
Current expenses	.0861	5.285
Interest and taxes (cows)	.1369	8.396
Depreciation (cows)	.0470	2.886
Marketing (paid)	.0886	5.433
Use of car	.0322	1.980
Total operating cost	$3.0590	$187.622
Credits other than milk:		
Manure	$ .1355	$ 8.378
Calves	.0497	3.057
Hides	.0015	.095
Sacks	.0128	.790
Appreciation	.0197	1.211
Total credits other than milk	$ .2192	$ 13.528
Total operating cost	$3.0590	$187.622
Total credits other than milk	.2192	13.528
Net cost of milk	$2.8398	$174.094

The following table summarizes all items of expense and credits, other than milk, from 375 cows on 19 farms of Snohomish county:

TABLE IV.

Items.	Per Cwt. Milk.	Per Cow.
Feed—Grain	$ .4140	$ 27.523
Hay	.3084	20.505
Silage	.3459	22.936
Roots and kale	.0050	.336
Pasture, soiling	.4520	30.982

It should be borne in mind that the figures given in the above tables are the results of one year's business, and undoubtedly will be changed somewhat when the second year's business is incorporated into the summary.

The attention of the cooperator is called to the following facts regarding the several items of cost given above:

The grain ration consisted mostly of bran or small mill run with a small amount of shorts, peas, patent dairy feeds, corn meal, oil meal, rolled oats and molasses used by a few dairymen. Practically all of the grain was purchased with the exception of small quantities of oats and peas in Whatcom and Snohomish counties. Sixty-five farms produced all of their hay which amounted to 73 per cent of the total hay consumed. Four farms purchased all of their hay, or 6 per cent of the total. The remaining 22 farms bought practically one-third of their hay, which they fed to the cows. Home-grown hay ranged in price from $18 to $28 per ton, while purchased hay varied from $20 to $40 per ton, depending on the quality and distance from market. Fifty-two farms in all counties used silage. In Snohomish county all of the farms except two used silos. Corn, vetch and oats, clover and sunflowers were all used successfully for silage. Silage was valued at from $6 to $9 per ton, depending upon kind and quality. Roots and kale were used by some dairymen and were valued at from $6 to $9 per ton at the barn.

A bedding charge was made when straw was used that had a market value. Waste from the mangers was not considered a bedding charge, as this was taken care of by the feed cost. Straw for bedding was valued at the price it would sell for in the community minus the delivery charges. The farmer's estimate of the number of tons used was accepted.

In determining the amount of man labor required for milk production the farmer's estimate of the number of hours required to do all the work directly connected with the cows was accepted. Direct man labor included such work as feeding the cows, milking, separating, preparing the milk or cream for market, washing dairy utensils, cleaning the barn for the cows and turning the cows in and out. The year was divided into two seasons of six

Passes 91st Milestone

(Continued from page one.)

taken the expedition to perpetuate the memory of the old Oregon trail."

That expedition, which, in 1906, moved eastward over the deep-worn ruts of '43 and of '52, is Mr. Meeker's uniquely conceived and picturesque achievement. In that year he again drove an ox team over the old trail—that trail of death and promise—to the old starting point. As a result, reverence and memory have rallied round the lasting achievements of the western pioneer, and all along the trail there rise proud landmarks. Our thanks, Mr. Meeker, to you for the labor of love that shall help us to remember their good citizenship, and yours.

On the cover page is a portrait of the face so well known throughout all the west. Below it is a picture of one of the old Oregon trail landmarks, Tortoise rock, on the western slope of the conquered Rockies. The map shows the pioneer's trail from the summit in Wyoming to the peaceful waters of Puget sound.

What Is Advertising?

A Big Force in the World Today

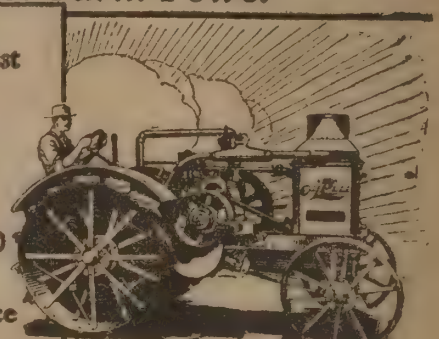
What is advertising? One expert defines the word as meaning "something to tell about something to sell."

Elbert Hubbard, the writer, said: "Advertising is the education of the public as to who you are, where you are and what you have to offer in the way of skill, talent or commodity. The only man who should not advertise is the one who has nothing to offer in the way of service, or one who can not make good."

But, however we define the word, it is certain that advertising is one of the great forces in the world today.

It is through advertising that tens of thousands of people have learned of the combined harvester, the sewing machine, the cream separator, the telephone, the silo and scores of other important inventions.

The advertisements in each week's issue of this paper are well worth reading. They contain up to date information regarding the output of many of the country's biggest and most progressive manufacturers and dealers.



It will surely interest you to read what these manufacturers have to say in their advertisements. And why not send to them for further information? By doing so you can obtain interesting and informative booklets, catalogs and circulars free of charge.

And when you do write, kindly mention the fact that you read the advertisement in THE WASHINGTON FARMER.

OILPULL TRACTOR

"The Cheapest Farm Power"

1. Lowest Fuel Cost
2. Lowest Upkeep Cost
3. Longest Life (10 years and more)
4. Reasonable Price

Why an OilPull Increases Farm Profits

Every farmer knows that there are just four factors he must have in the tractor he buys to get cheapest power. These are (1) Low Fuel Expense. (2) Low Repair Expense. (3) Long Life. (4) Fair Price.

In the Rumely OilPull Tractor these Four Factors have been combined for the first time. An OilPull, for example, has held (1) the World's Official Fuel Economy Records for 10 years past. (2) Government figures show a national average yearly upkeep cost of $40. Among many OilPulls of all ages the average was found to be less than half the Government figures. (3) The average life of an OilPull is more than 10 years. The first OilPull, Old Number One, is still serviceable after 12 years. (4) Rumely prices are very reasonable. They are strictly in line with present economic conditions.

Everything needed to make cheap power is here.

Triple Heat Control

OilPull records are due largely to TRIPLE HEAT CONTROL—a wonderful oil burning system which absolutely solves the problem of maintaining motor temperatures within those exact limits where cheap kerosene becomes the most powerful and cheapest fuel. *Gets the power out of cheap kerosene.* The only system in which oil is used in the cooling system instead of water. No freezing. No overheating. Under light loads temperatures are correct for power and economy. As load increases the motor actually grows cooler.

It is due to **Triple Heat Control** entirely that the OilPull is the only tractor sold with a *bona fide* written guarantee to burn kerosene successfully at all loads and under all conditions up to its full rated brake horse power.

Write for FREE Book

Among the four sizes, there is an OilPull that will make a profit for you. Go see the local Advance-Rumely dealer—he will demonstrate the tractors and point out the features.

In the meantime, write for complete information and our special book on Triple Heat Control.

Muck and mire that stick like glue

—that's what the stockman is up against

THAT'S why we invented the U. S. Walrus —an *all-rubber* overshoe that washes clean like a boot. It made its first big hit with the stockmen of Iowa—but today it's making friends with farmers everywhere.

Tough—rugged—comfortable—the U. S. Walrus keeps feet warm and dry in the coldest weather. Cut to slide easily over your regular shoes. Buckles that snap shut or flip open in a hurry. Thick fleecy lining. A smooth rubber surface that manure can't stick to—you wash it off in a flash!

You'll find every type of rubber footwear in the big U. S. line—and every one is *built to last.* Always look for the U. S. trademark —the honor mark that millions of farmers know.

United States Rubber Company

This is the "U. S." Walrus

—the all-rubber overshoe, red or black, with warm fleece lining

Prize Pig Contest

Here are more letters in THE FARMER'S pig prize contest. A pure bred gilt, bred to farrow in the spring, is the first prize. Second is $15; third is $10. Contest closed Dec. 31. Judging of letters will begin at once

Always Interested in Hogs

To the Editor of The Washington Farmer: I have been a reader of our excellent farm paper, The Washington Farmer, for nearly five years.

I have always been interested in the subject of hogs. Therefore I take pleasure in participating in the pig prize contest on the subject of hogs as a by-product on the farms of the state.

I am sure that we have all noticed fields of stubble, as well as fields of summer fallow, green with the wheat that was left in the field after harvest. No farmer can save all the wheat to thresh—some of it will shatter out, and the binder will leave some. This is unavoidable. Often, as I have gone through the field, I have picked up whole stalks of wheat. I have also seen many kernels, kernels lying thick, I may say, upon the ground. Of course the cattle can gather up the heads of wheat, but they do not put it to such good advantage as a hog does. The kernels on the ground the cattle do not get at all. So there is all that grain wasted, unless you have hogs to turn into the field to eat it up and turn it into monty. I know a farmer who put his hogs in the stubble field in the fall a while until they were fattened and then sold them directly to the butcher. Droves of hogs are thus fattened on what would otherwise have been waste. Hogs also grow a great deal when they have a large acreage to exercise over.

Hog refuse is one of the richest.

Farmers are now planting more and more corn on their summer fallow. They are also planting more peas. These crops not only add an extra crop of feed, excellent for hogs—they benefit the soil and cause more wheat to be raised per bushel per acre as the next crop. Pumpkins can just as well be planted in the corn fields as not. They yield abundantly and are a good hog feed.

Most farmers have orchards. Most farmers neglect these orchards. Hence the ground is covered with unsalable apples—culls. These would undoubtedly go to waste if it were not for Mr. Hog. He can manufacture them into delicious pork for the dinner table.

No other animal can consume so advantageously to the owner the skim milk, waste vegetables and vegetable peelings, weeds, dishwater and other refuse from the kitchen and garden as the hog. In fact, if it weren't for the hog much of the aforesaid would be a total loss on many farms.

I also know farmers in the wooded-off section who fence off a field of partly burned-over land hog-tight. The hogs eat grass, kill out obnoxious weeds, eat charcoal, drink water and grow. The little pigs and their mother live in this pasture. When the pigs are large enough in frame they are placed in the fattening pen, fattened and sold, the only expense being the few last weeks.

Every farmer should keep one hog at practically no expense, and as many more as is in proportion to his acres, orchard, kind and mode of farming.

Hogs, like anything else, need present and fore-thought to bring in the profit. Hogs do better when their quarters are kept clean and warm. They like to be comfortable as well as anything else does.

Every one appreciates pork and lard he raises better than pork and lard he buys from the market. MRS. T. R. DAILEY.
R. 2, Box 92, Palouse, Wash.

By-Products Essential

To the Editor of The Washington Farmer: Very few industries could survive if the revenue derived from by-products were eliminated. This is especially true of the farming industry at this time when the prices on the main products are frequently below cost of production on farms where a proper system of crop rotation and byproduct utilization is not employed.

The greatest single agricultural loss to the state is the system of summer fallowing land that has enough rainfall to produce a crop each year. Summer fallowing adds nothing in the way of soil fertility, but destroys humus, which causes the land to leach and wash away. On the other hand, a legume crop grazed by hogs builds up the land in both nitrogen and humus. Nitrogen is the most expensive element in commercial fertilizer, but an abundant supply can be secured from the air by a proper legume crop rotation, and humus is absolutely necessary before a soil can absorb and retain water, without which no soil can be productive. I say grazed by hogs, because few, if any, legume crops can be successfully grazed by other farm animals on account of bloat, and grazing is the only system that leaves the maximum of fertility on the land.

Alfalfa and peas are the legume crops most successfully and generally grown in the Inland Empire. At present prices these crops can not be profitably harvested by man labor, but will show a good profit where harvested by hogs.

Experiments show that wheat will make as large yields on pea stubble as on summer fallow and on alfalfa sod the crops are frequently twice as large as they were on the same land before seeding down.

In practically every part of the state hogs are a profitable byproduct when grown on pasture and such surplus milk, fruit, vegetables and shattered or lodged grain as go to waste when not so used.

Another reason hogs are a valuable by-product is that they allow a more intensive system of farming with little, if any, increase in labor during the busy season. They also allow a farmer to conduct a much larger business with the same amount of capital because he has it working all the time. E. L. POWERS.
Palouse, Wash., Route 1.

Hog Is a Food Producer

To the Editor of The Washington Farmer: The hog is a health promoter. As a scavenger he destroys many waste materials that would otherwise fester and decay, forming a breeding place for flies and a source of noxious exhalations, thus proving a menace to health and comfort.

The hog is a food producer. By some mysterious process known only to himself and nature, he converts the vile contents of the most wasteful and necessary food wise prove worse than useless, into some of the most aseful and necessary food products of the world nothing can take the place of the bacon, hams and lard which, all unconsciously, the humble porcine produces. No substitutes can successfully compete with them. And the housewife who has a plentiful supply of these staple products in her storeroom, not to mention the sausage, head cheese and spareribs of butchering time, finds them a tower of strength and need never be at a loss for something to cook as the foundation for a good meal.

The hog is a wealth producer. By a sort of subtle alchemy he can almost be said to possess the power to turn whatever he comes in contact with into gold. By furnishing several of the standard food products of the world he certainly contributes largely to its wealth. The meat packers—ha! ha!—are notable illustrations of this. But the farmer who raises a few hogs as a by-product finds them almost as profitable in proportion.

Now, without reciting in detail my own personal experience with the hog, I can fully corroborate all that has been claimed for him in the articles already published, and am free to assert that of all the various by-products of the farm, such as poultry, bees, garden truck, etc., the hog stands pre-eminent as a health promoter, a food producer and a money maker.
EMIL GRAF.
R. 2, Creston, Wash.

ROOTS FURNISH SUCCULENCE.

Regardless of the food value of root crops and silage, they both have the merit of being succulent feed.

New Lamp Burns 94% Air

Beats Electric or Gas

A new oil lamp that gives an amazingly brilliant, soft, white light, even better than gas or electricity, has been tested by the U. S. government and 35 leading universities and found to be superior to 10 ordinary oil lamps. It burns without odor, smoke or noise—no pumping up, is simple, clean, safe. Burns 94% air and 6% common kerosene (coal oil).

The inventor, W. W. Johnson, 31 W. Fifth St., Portland, Ore., is offering to send a lamp on 10 days' FREE trial, or even to give one FREE to the first user in each locality who will help him introduce it. Write him today for full particulars. Also ask him to explain how you can get the agency and without experience or money make $250 or $500 per month.—Adv.

Good Crop

Labor

Fertilizer

Seed

the big point about Seed buying

is the fact that of all the elements that enter into the cost of your garden, seeds are the most important fundamentally and the least important as an item of expense. The cost of seeds is the same whether they are good or bad. Labor and fertilizer together always make up the greater part of the total cost, and they are valuable only in proportion as the seed is reliable and productive.

The difference in cost between reliable seeds and indifferent seeds is infinitesimal; but the difference between results often is the difference between success and failure.

It pays to take no chances with your seeds. Get the best seed insurance you can buy—the long-standing reputation for reliability of the name Lilly's. Lilly's Seeds have got a good name by growing good crops, for 25 years and more.

Get YOUR copy of Lilly's 1922 Seed Annual. It contains the information you want about flower and vegetable seeds, fertilizers, sprays, poultry and bee supplies, etc.

Ask your dealer or write

Planet Jr.

Accurate seeding pays

Seed costs money. Labor costs money. Save both by planting with Planet Jr. seeders. Planet Jrs. sow regularly, rapidly and accurately in hills or drills at proper depths in even, narrow lines. A Planet Jr. leaves no gaps—wastes no seed. Every Planet Jr. has an adjustable index with the names of the principal seeds, enabling the user quickly to change the feed to sow the different varieties.

Planet Jr. sows so evenly and straight, it makes close cultivation of standing crops quicker and safer.

All Planet Jr. Farm and Garden Implements are scientifically constructed on proved, practical lines. Send for the complete Planet Jr. catalog, showing seeders, wheel hoes, horse hoes, riding cultivators, etc.

National Master's Address

Delivered at Annual Grange Convention at Portland

This is the third and last installment of Master Lowell's address before the recent convention in Portland.

THIRD INSTALLMENT.

As we here deliberate on the big problems so important to our welfare, there is assembled in the capital city of the land the most significant gathering of the nations of the earth that has ever been held. With the burden of modern warfare crushing down the shoulders of all nations and with no relief in sight, except it come through international agreement, the eyes of the whole world are focused upon the Washington conference and the prayers of millions upon millions of human souls are hourly rising to the throne of the Omnipotent that out of this conference shall come some ray of hope for the future peace and security of the world.

Through the constant and consistent advocacy of peace and the adjustment of human differences by arbitration, instead of by resort to the sword, the grange record upon the great issues of armament reduction, world peace and international brotherhood is clear and above question. Very wisely may we affirm again the established attitude of the grange on those questions and devoutly hope that in this great crisis of world affairs the leadership of America shall be toward the light.

Nevertheless, we must not lose sight of the fact that instead of allaying human passions a terrible World war has inflamed and intensified them, and that in all present considerations good, sound common sense and the judgment of sanity must still be retained. As the possessor of the world's greatest wealth and natural resources, the United States must never lose sight of its duty to protect its own citizens and their rights, of both life and property, and I feel very sure that even this peace-loving grange has no desire that its emotional sentiment lose sight of the grave realities of human life, with the jealousies and envyings which nations, like individuals, still retain.

With a generous attitude toward all the world. which our course of the last five years has abundantly proven, with no selfish greed for the possessions of any other peoples, and strictly adhering to the doctrine of not meddling in others' affairs, I am constrained to believe that the slogan, "America for Americans," has not yet lost its force, nor that it has become altogether unworthy of frequent mention. If we are to adhere to this fundamental policy of the fathers, then we must still be mindful of the possible emergencies in human affairs and always provide ourselves as a nation, as individuals would do, with the necessary means for adequate self-protection.

I sincerely trust that on such a grave issue this national grange will make no declaration which it will ever in later years have occasion to regreat.

Agricultural Assistance.

The trying days of the last year have seen attempts made in many directions to "do something for agriculture," with the result that a great deal of misunderstanding has arisen over what is actually being done to help the farmers. From a great deal of alleged "agricultural legislation" the actual farmer gets no benefit whatever, though frequently in his name selfish schemes are put over by promoters and long pay rolls are created for those who aspire to do almost everything else for agriculture except to actually work at it.

It is unfortunate that the farmers have had to bear the name of receiving state and federal aid which never reached them, while in making up its estimates the public has often been led to believe that a great deal of assistance was being rendered to agriculture. We should be very slow, as an organization of real farmers, about lending countenance to schemes of doubtful farmer advantage, first finding out whether the real farmer, at home on his farm, is ever going to see the benefits which are so loudly predicted and which will be paid for out of public funds.

The membership are especially uregd to keep in touch with the reports sent out every month through the National Grange Monthly by our Washington representative, for through no other source can such reliable information about legislative projects be gained. Brother Atkeson never fails to get at the bottom of things, his keen pen punctures many a bubble and alleged farmer-help schemes seldom escape his penetrating vision. Political schemers oftentimes sponsor legislation for a purpose and the farmers are more often used for hoodwink purposes than anybody else. As an organization that asks no special favors from state or national government, but simply demands a square deal for its people, we owe a duty to the public in general to inform them on the actual needs of the farm people; to indicate the practical directions of needed assistance, and to refuse to have the farmers charged up with alleged benefits which they never get.

Reference above to keeping informed on the facts which our Washington representative so thoroughly supplies leads me to drive home this thought for your consideration: Is it not possible that, in our eagerness to be always telling those outside its rank what the grange is doing we overlook the greater need of giving our own members that very information?

If every subordinate grange in the country will get thoroughly enthused over the benefits derived in the order it will never be necessary to hold frequent open meetings, to canvass the community for new members or to employ garden rake tactics to get them into the grange. Making every subordinate so influential for good that by its works it shall be known, is, according to my way of thinking, the most effective means of doing extension work for the order.

Home Love the Basis of American Safety.

One of the crying needs of the hour in America is for a revival of a desire for homes. The present day drift is too much away from the home and toward a form of stimulated and mechanical existence that is foolishly called "living." Read the description of so-called "homes" to rent in any city newspaper, note their size and equipment, and do not overlook the significant clause, almost invariably added, "No children allowed," to realize whither we are drifting. The grange has always stood for the American home and no organization has done more to develop, to enrich and to sweeten our national family life. The grange advocates for its subordinates the ownership of grange homes, in compliance with the fundamental principle upon which our fraternity is builded, and in similar spirit it warns the American people today that they are drifting away from the only moorings that constitute genuine safety.

The right of personal property ownership must likewise ever be a cardinal principle of the American people. While this idea has been savagely attacked and often overthrown temporarily in other countries, these people have always been forced to return to the principle which they deserted. There is nothing more worthy than personal ambition and it is perfectly safe when devoted to the building of homes, the rearing of families within them and binding all to faithful efforts, through the silver cords of love. But once let people get the idea that all men have so-called "equal rights," and then preach the theory that such equal rights entitle them to demand things for which they have never given full measure of pay—if that time ever comes to America we have started a malignant cancer growing in our body politic.

When a man toils faithfully through the day and goes home at night to a family of his own, actuated always by a keen desire to be an honor to that family and to the community in which he lives, that man is headed right and so far as he typifies all men, America is safe, for it is from just such homes that came the boys who went across the water to help make the world everywhere safe for happy homes.

A few less moving pictures and more family gatherings around the cheery hearthstone; a little less baseball playing, and more honest worship of God on the Sabbath day; less disposition to just put in our time, and more purpose to actually earn our wages; a little less desire to have the other fellow bear all the loss in the present hard times, and more willingness to carry our part of the load; less chasing the will-o'-the-wisp of modern excesses and excitements, and more of the homely, home-loving instinct; fewer thrills and more sense—these changes would go a long way toward curing all the ills that we are now beating the air about and seeking hastily-enacted legislation as a universal panacea.

Unless we are ready, all of us, to be honest with ourselves and to apply these searching tests to our own lives and tendencies, instead of to some one else's, we shall not make much headway toward improvement. It is always to be borne in mind that if progress in these directions is to come it will have to begin with the individual life and work up naturally through the family, the community, the state, the nation and the world. Legislation can never transform humanity; individual determination can.

Unity in Action.

In no other direction lies greater grange need for the coming year, if we are to be a compact, effective organization of national dimensions, than that we shall put intense stress upon unity of action, to the end that every part of our vast machinery shall function in team work fashion to carry out a program of largest usefulness. I long to see the time when every policy of the national grange, as enacted each year in annual session, shall be put into effective operation by the concerted and energetic backing of every last one of our more than 30 state granges, while in each state every subordinate and Pomona organization likewise presents a united front toward the achievement of the same ends. We shall never accomplish what we ought to as an organization until the smallest subordinate grange in the weakest grange state catches the same thrill for accomplishment that we feel who constitute the highest legislative assembly in our fraternity. Every grange leader should stress this necessity to the utmost limit the coming year and every loyal patron ought to catch the vision.

Toward this end I very earnestly recommend that every state master be required to make a quarterly report to the national master of the progress of the order in his state; these reports to comprise a summary of similar quarterly reports which state masters shall require from the Pomona and subordinate masters within their jurisdiction. In some states such a reporting system is already in good working shape and has materially increased the efficiency of that state grange.

(Continued on page fourteen.)

LEARN - AUTOS - TRACTORS AND AUTO ELECTRICITY AT ADCOX SCHOOL

LARGEST IN THE WEST

1922 will be a *big* year for *trained* auto and gas engine mechanics

Hundreds of auto mechanics, gas tractor operators, auto electricians, battery experts, etc. needed for spring work ---prepare now for one of these big paying jobs.

Heads of auto factories, automobile financiers—the big men in the auto industry—are spending millions of dollars in new factories and other facilities for increased production. Dodge, Cadillac, Chevrolet, Studebaker and many other big automobile concerns are in the process of building or have just completed new factories.

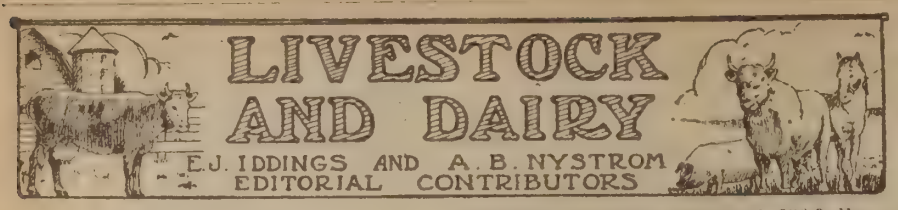
The Durant company, the new young giant of the auto world, with plants in the east and central west, is building a very large plant at Oakland, Cal. The Continental Motor Corporation has recently added 2000 employees. Right now while business is almost at a standstill these big men in the auto business are spending millions and millions of dollars. Why? Because they know that car prices are going to slide back to pre-war prices in the near future, probably before spring. They know that the automobile business has been retarded only because every one is waiting for car prices to come down—then there will be more cars sold than ever before in the history of automobile industry. They know with almost 10,000,000 autos in the United States that they must manufacture at least one and one-quarter million cars every year to replace the cars that are worn out and discarded. They know that they are hundreds of thousands of cars behind the replacement schedule and that each day brings them nearer to the time that the "old wrecks" will have to be put aside and new cars take their place. They are preparing for a bigger and better automobile business than ever before and while all this is going on hundreds of fellows are sitting idle and complaining of hard times. But the fellow who reads the signs of the times will prepare himself now for one of the wonderful opportunities that will undoubtedly be offered to trained auto and gas engine men this coming spring and summer.

If you come to the Adcox school now you will be prepared to step out and land a big paying job next spring or, better still, get into a fine business of your own.

112-PAGE CATALOG FREE

If our catalog fails to sell you an Adcox course we will send you a railroad ticket to Portland and pay for your board and room for four weeks while you attend school FREE of charge. If you don't find our school to be exactly as represented in our catalog and other literature we will pay your return railroad fare home and the whole transaction will not cost you one cent. Every detail of our offer and remarkable school is fully explained in the large 112-page book—the largest and most complete auto school catalog ever published—send for it today—now, use this coupon.

ADCOX AUTO AND AVIATION SCHOOL,
Corner of Union Avenue and Wasco Street,
Portland, Ore.



Kindly send me a free copy of your big red book, Number One, which tells all about autos and how to get into this great game, and your 4 weeks free trial.

Hog Rations

By JERRY SOTOLA, Animal Husbandry Department.

In a series of feeding trials with hogs, conducted at the Washington experiment station in Pullman, attention has been given to a study of the comparative value of the two supplements, tankage and fishmeal. The fishmeal is a product prepared from trimmings of fish in the canning process. It varies in protein content from 56 to 70 per cent. The color may vary from yellow to dark brown and generally the darker the color the higher is the protein content. The grade containing 56 per cent protein is most available and for this reason was compared with tankage. All grades possess the charactertisic fishy odor.

Tankage is prepared in packing plants from fresh meat scraps, fat trimmings and scrap bones which are thoroughly cooked by steam, under pressure. The cooking process separates the fat, which is then drawn off. The residue is dried and ground to a fine meal. The digestier tankage contains practically no hair and very little bone, and is so distinguished from grades of tankage used as nitrogen fertilizers. This protein supplement is more or less uniform in composition, containing about 60 per cent crude protein.

Lot 1, receiving tankage in grain mixtures, made an average daily gain of 1.314 lbs. fro 57 days, requiring 441.5 lbs. of concentrates to make 100 lbs. body gain.

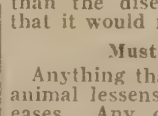
Lot 2, receiving fishmeal, made a daily gain of 1.401 lbs. per head for 57 days, requiring 412.3 lbs. of concentrates per 100 lbs. gain.

Lot 3, on pea forage, receiving tankage, made an average daily gain of 1.065 lbs. for 74 days and required 285.2 lbs. of grain besides tea forage to make 100 lbs. body gain.

Lot 4, on pea forage, being fed fishmeal, made a daily gain of 1.079 lbs. for a similar length of time, consuming 286.7 lbs. of grain mixture to make 100 lbs. body gain. These results are almost identical as far as daily gains and feed consumed to make these gains are concerned. On pea forage no difference between the feeding value of tankage and fishmeal were noticeable.

Lots 5 and 6, including seven hogs each, made an average daily gain per head of .802 lbs. and .809 lbs. respectively. Lot 5, receiving tankage, consumed 320.3 lbs. of concentrates to make 100 lbs. gain, while lot 6, fed fishmeal, consumed 320.5 lbs. to make the same gain.

The comparative feeding tests in dry lot, on pea forage and on alfalfa forage involving 28 head fed 57 days, 35 head fed 74 days and 14 head fed 65 days, have failed to demonstrate any marked difference between fishmeal containing 56 per cent protein and tankage containing 60 per cent protein.



LIFE PRESERVERS FOR LIVE STOCK

By DR. E. E. WEGNER, W. S. C.

RESPIRATORY TRACT, ARTICLE 6.

Pneumonia.

This disease is most feared of all, as it is very likely to result in the death of the patient; certainly there are a great number of fatalities. This condition is one of inflammation of the lungs and its seriousness is due to the fact that animals so affected can not get a sufficient amount of air and the diseased portions are quite solid and in distinct contrast to the normal spongy lung. There are quite a number of causes, some that are preventable and some that are not so easily controlled. There are different kinds also, depending on which portions of the lungs are involved, but for the present discussion that is not of great importance.

The irritation that gives rise to the inflammation may come from various sources. There is unquestionably a contagious pneumonia in certain animals, especially the pig. This is seen also in other animals, though it may be in connection with other diseases, but the bacteria that causes the disease in the first place may transfer itself to the lungs and start serious trouble there. We fear some diseases more because of the danger of an attending pneumonia than because of anything else. Much of the care that is recommended for influenza, for instance, is because we fear the complications more than the disease itself if we were sure that it would run a typical course.

Must Maintain Vitality.

Anything that reduces the vitality of an animal lessens its resistance to other diseases. Any disease of the respiratory tract lessens the resistance of the organs of that tract to other troubles, just as a man once down may be hit by anybody because he is not in position to defend himself.

Another serious danger from pneumonia other than suffocation is that of blood poisoning from the absorption of products from the diseased lungs. The condition of the diseased portions becomes very bad in most instances and has a decided tendency to soften and slough away to quite an extent. The breath of animals so suffering is usually very offensive after the first few days of illness. There is quite an amount of this material being taken into the blood all the time and it creates a general disturbance of the system that resembles blood poison, and is so, in effect.

The breath is particularly bad when the portion of the lung close to the small air tubes is affected, because the diseased portion of the lung is in positio nto throw off this offensive material into the tube through which the air must pass. These cases are the ones that develop from an inflammation of the bronchial tubes in the first place.

Numerous Causes.

Causes of pneumonia are quite numerous and aside from the infectious type that has just been touched upon. Mechanical causes are very common in animals, as when an animal is required to work in irritating dust day after day in a team where there is not the best chance to get fresh air. We see this many times in the combine teams, where 32 horses are driven together in one team. The inside ones do not get the fresh air at times, but they do get a lot of dust that can not be avoided. Then, too, the wheel horses in four and six horse teams working on dusty roads get a great deal of dust from the work. It may be quite as bad for the leaders though, if the teams are close together on the road and keep the dust stirred up all the time. The dust of alkali countries is much worse than ordinary dirt that does not contain alkali. This dust may also cause irritation of the entire respiratory tract.

Misdirected Drenches.

Another source of irritation is from misdirected drenches. The common practice of drenching animals with various kinds of medicine when they are sick has

"Those Who Dance Must Pay The Fiddler"

There's a settlement in profit or loss, for nearly every indulgence.

Sometimes the pay day is long deferred, and in that case the settlement may bear compound interest.

Often a payment in ill health is required for the dance had with tea or coffee during earlier years. Sometimes the collection comes in sleeplessness, sometimes in headaches, sometimes in high blood pressure, or in nervous indigestion—sometimes in all these penalties.

Nerves won't always stand the whipping of tea and coffee's drug, caffeine.

If you've been dancing to tea or coffee's fiddling, why keep on till payment time comes? If you're beginning to pay, now, why not cancel the contract?

here's an easy and pleasant way to avoid tea and coffee's penalties, as thousands have found who have changed to Postum. It is a delight with any meal—rich, comforting and satisfying—and it never harms. Even the little children can have a breakfast cup of Postum, with no fear for what may happen to sensitive nerves.

Instead of paying penalties for your meal-time drink, let it pay benefits to you, by giving natural health a full chance—and begin the new arrangement today. Any grocer will sell you, or any good restaurant will serve you Postum.

Postum comes in two forms: Instant Postum (in tins) made instantly in the cup by the addition of boiling water. Postum Cereal (in packages of larger bulk, for those who prefer to make the drink while the meal is being prepared) made by boiling for 20 minutes.

(Compiled from U. S. Government statistics)

Look at this diagram!

It shows just how profitable the production of butter or butter-fat has been since 1914, and that it pays just as big today as ever.

The top line of the black area shows the price of butter, while the bottom line shows the cost of feed required to produce a pound of butter. The thickness of the black area then shows the spread between cost of feed and price of butter—or the net profit. For example, near the end of 1921, feed to produce a pound of butter cost 16.9 cents; butter sold for 45.7, leaving a difference of 28.8 cents per pound, or 170% profit.

De Laval Cream Separators have helped more than any other factor to put the butter business on such a profitable basis—by saving cream, improving butter in quality, saving time, and saving skim-milk in the best condition for feeding.

Let a De Laval start making and saving money for you now. See your De Laval agent or write for full information. Prices on pre-war basis. Sold on easy terms.

Cream Separator and Milker

been the cause of many cases of pneumonia, and frequently the effect of the drench is much worse than the disease from which the animals were suffering. Many of the drugs used in medicines produce severe damage when they get into the lungs, as they can not be readily gotten rid of by the lungs, and they remain there and cause severe inflammation and many times fatal pneumonia. Raw linseed oil is one of the most common offenders, probably because it is an oil very commonely used. When it is poured into the lungs there is very likely to be a funeral in the near future, and many a good horse has been killed by its use when he would have easily survived the ailment for which the oil was given.—Copyright, 1921, by E. E. Wegner.

VETERINARY

By DR. S. B. NELSON.

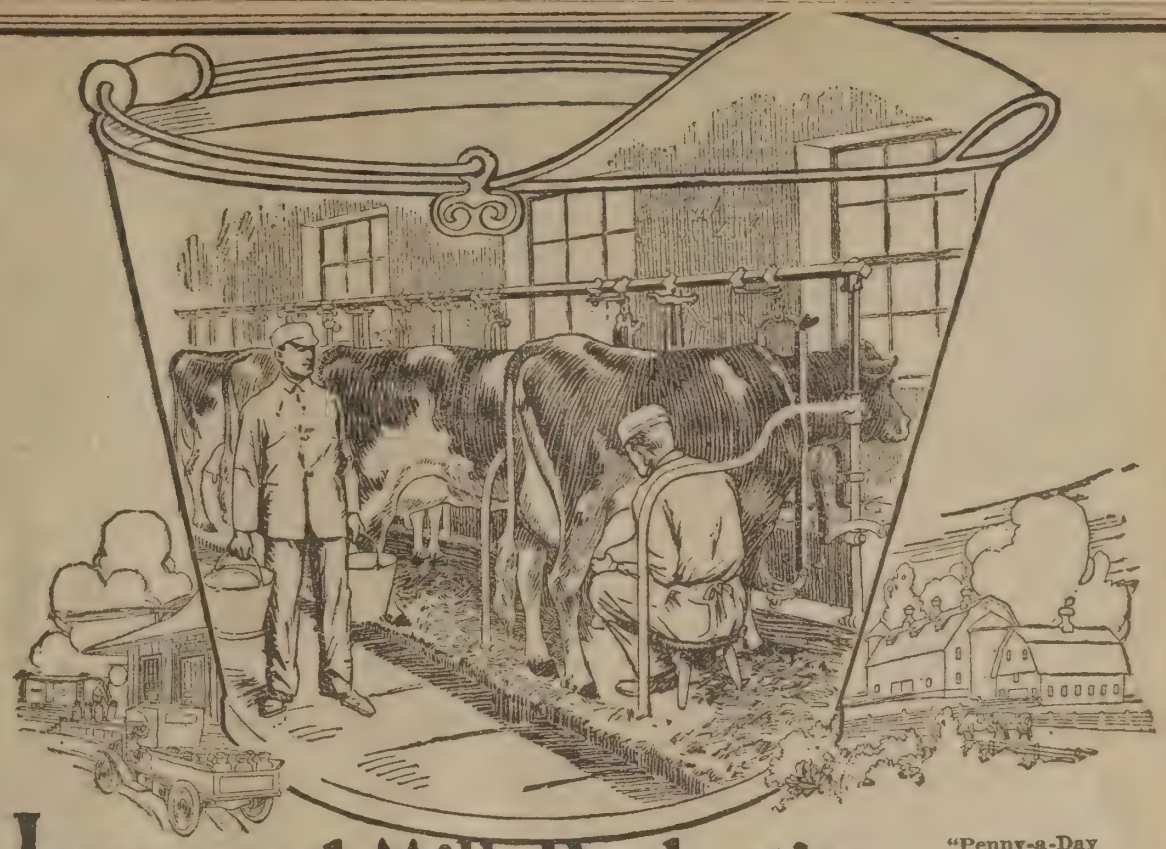
Heifer Is Free Martin.—In September our cow dropped twin calves, a heifer and a bull. We would like to raise the heifer calf, but have been told that a heifer twin to a bull calf will not be fertile. Is this so?
Vancouver, Wash. J. G.

The heifer is known as a Free Martin and there are many instances on record where Free Martins have grown to maturity and have produced offspring.

Alfalfa Bloat—Will you please tell me what would be the best remedy for alfalfa bloat for cows and, in case it is necessary to stick them, what size knife or instrument should be used? Will you describe as near as possible the place they should be stuck. D. C. H.
Prosser, Wash.

The best instruments to use are the trocar and canula, which you can get from any instrument house. The cow should be stuck on the left side, a hand span below the back bone, midway between the last rib and the hip bone. When you take out the canula press the skin in tightly so as not to allow the skin and the wall of the stomach to separate. This can be followed by one to two pounds of epsom salts in from three to five quarts of water.

Lump on Cow's Side—Can you tell me what causes a lump that came on the side of my cow? She has had it for about two weeks and it is about as large as an ordinary sized water kettle. It seems to get bigger. She eats and drinks and seems all right otherwise. H. B.
Ritzville, Wash.



The lump on the side of your cow might be one of two things, depending upon where it is. It might be a rupture of the muscular tissues of the abdomen which has allowed the escape of the intestines from the abdominal cavity. There is no treatment for this except a rather difficult surgical operation. If the lump came on gradually and is hard and feverish, it may be an injury and an abscess forming, but I can not tell, from your description, which it is.

Milk Flow Stopped—We have a Jersey three years old. A week ago she took sick; lost all her milk inside of 12 hours. Her left hind teat became inflamed; she was unable to get up. The veterinarian said she acted like a cow with milk fever; inflated her bag; now she is able to get up. She eats fairly well, but the left side of bag is caked, so I can't get any milk out of the hind teat; right side of bag is all right; get milk from that side, about half what she usually gives. Could you give any information in regard to this disease? She is not to freshen until first of March. Have been feeding her rolled oats and oat hay and what she could find in stubble field. I bathe her udder with hot water and apply corona wool fat mixed with turpentine three times a day. We have only this one cow. Do you think she will come back to her milk on that side? MRS. A. N. S.
Opportunity, Wash.

I think you are using a perfectly correct treatment for this cow and with care she will come back to her milk part way. She may not return to her full milk capacity.

Must Cut Valve.—I have a cow that has freshened and it is simply impossible to get the milk from her udder. There is milk in the teats when you try to milk her, but when the milk is all milked out of the teats it stops coming. The valve in the teat seems to close and you have to wait for the milk to leak out into the teat again, with the same result. Is there anything I can do for her? L. T. P.
Twisp, Wash.

The valve in the upper part of teat, between the teat and the udder, has become contracted. This can be remedied by inserting through the teat up through the udder a little instrument called a teat slitter. It has a little knife that can be buried in the tube until it has been inserted, then the knife is pushed out and the instrument drawn down, making a cut in the valve. The knife should be again buried in the instrument, the instrument pushed up and turned half way around, the knife pushed out and the instrument drawn down, cutting the other side. This procedure should then be repeated, turning the knife a quarter way around and drawing it down, so as to make flaps.

Increased Milk Production

—and a better grade of milk

MORE and richer milk is well worth trying for. It means more money on the profit side of dairying. And it is far from being just a dream. In every herd there are certain cows that are not yielding up to capacity, just because of some reduced vitality of genital or digestive organs—some sluggish condition of the milk-making organism that proper medicinal aid would quickly correct.

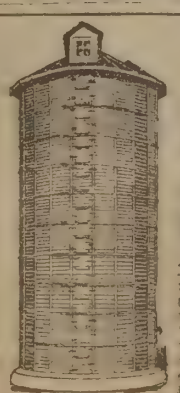
It is just such conditions—very common to hard-worked milch cows—that Kow-Kare is able to clear up; because this famous cow medicine has properties that act directly on the organs of production and reproduction, making them function as Nature intended. Besides effectively preventing the ailments that make cows unprofitable, Kow-Kare has a nation-wide reputation as a reliable remedy in the treatment of Barrenness, Abortion, Retained Afterbirth, Scouring, Bunches, Milk Fever, Loss of Appetite, etc.

Play safe; know what to do when a cow is sick. Send for our free book on cow ailments, "The Home Cow Doctor." It tells the right treatment for various ailments, and has a wealth of information valuable to cow owners.

Kow-Kare is sold by general stores, feed dealers and druggists, at the new reduced prices—65c and $1.25.

DAIRY ASSOCIATION CO., INC.
Lyndonville, Vt.

"Penny-a-Day Prevention"



The cheapest health insurance you can invest in is to use Kow-Kare regularly a part of every week during the winter to keep the assimilation and digestion in good order and throw off disease. Many of the most serious disorders that arise during calving period can be prevented by using Kow-Kare for a couple of weeks before and after. Don't overlook this suggestion.

POULTRY

Make It a Study

Beginners With Poultry Succeed

In less than 10 months' time the three-acre farm owned by Peter Tait of Kirkland had been transformed from a heavy growth of timber to a neat home and a producing poultry plant. Today the little 150-bird flock is a mecca for many of the neighbors who find occasion to drop in now and then for advise and inspiration.

"We knew practically nothing about the poultry business when we started out," remarked Mrs. Tait, "but we read all of the experiment station bulletins and followed the Shoup plan carefully. Soon after getting settled on the place we built a small double unit laying house and set up a brooder in one section for the shipment of 1000 baby chicks which came in May.

"It was quite an undertaking, but we had no bad luck because we followed the instructions to the letter. When the young birds were old enough to separate we sold off a large part of the cockerels and canned what remained."

It was early in the following September that the pullets began to lay their first eggs and since they were from a good laying strain they kept up the good work until late in the winter, when they were averaging a 75 per cent lay. Mr. Tait admitted that there was danger of the hens overworking and thereby making a curtailed production in the coming spring, but there was as yet no indication of a lowered vitality in any of the flock.

Soon after the flock had begun laying every fowl was given a thorough examination and sized up in accordance to the Hogan system of culling, with the view of picking out any poor layers. The lay from some of the odd individuals did not justify the effort, however, according to Mr. Tait. When asked for an explanation he said it was perhaps because there were really no poor typed birds in the flock, such as there would be in an ordinary flock of mixed hens.

"We find that it is more practical to use the ready mixed feeds since the different parts, such as fish meal, can be better analyzed by the laboratories before they were mixed, while if they were to be purchased separately and mixed at home their purity could not be vouched for. We found that there was very little difference as to cost since we buy in ton or carload lots, anyway.

"As for green feeds, we have to buy most of it since we didn't get any kale planted last summer. There is one point that we have always maintained as beneficial and that is the feeding of sprouted oats. We have always fed it after it has only been slightly sprouted, when it is classed as a grain and not as a green feed. There are some who seem to think that after it has sprouted it should be fed for a green feed."

In explaining the plan of the poultry house Mr. Tait said that he had followed the Shoup plan except for a few details which he considered a slight improvement. The walls back of the roosts were boarded up so as to admit the air from the outside in such a way as to take the foul odor from the dropping boards and let in fresh air. The nests were placed next to the windows instead of under the dropping boards, as is usually the custom. The idea of this change was to keep the birds free from mites and also to have them out of the way when the dropping boards are being cleaned.

The bottom of the nest boxes are fitted with hooks so that they may be removed when cleaning. This allows for the removal of all the nest litter at the same time and the bottom can be swept with a broom and sprayed.

"Come here," Mr. Tait called to one of the little birds as she pecked at his shoe laces. "I want to show the man what a good layer you are. This hen showed all the indications of a poor layer when the flock was culled over and she had been tagged with a red legband. We can tell by the color of her legs and beak that she is laying heavily and then we have often caught her on the nest. It all shows that you must watch for the color if you want to be sure.

"We have been keeping a coop in the feed room for sick hens and whenever one of the flock has indigestion or any other trouble she is doctored up until ready to be returned to the laying house. This may not pay as a general rule, but we feel that it pays to keep them all in the best of condition. The whole flock is given a dose of salts once a week in order to keep their appetites keen.

"Our plans are to buy another thousand day-old chicks and build another laying house. We can take care of 1000 laying hens almost as well as half that amount and then it may be that we could adopt the trapnest plan. This would not be practical until we were ready to sell breeding stock."

Before the Taits took to poultry raising they were very fond of eggs and would keep them on hand and have eggs for breakfast often. Now that they have an abundance of their own they do not seem to care for eggs and put them all up for market except what few they need for cooking. "Perhaps it is just a matter of getting too much of a good thing," remarked Mr. Tait, "and I suppose we will some day get tired of fried chicken, but it seems a long way off now."

Better Results

Obtained From Culling the Flocks

"Our culling demonstrations for the last year throughout the state are constantly showing better results," remarked W. D. Buchanan, poultry specialist of the state college. "It is my opinion that it will result in our establishing a system that we can depend on.

"Our biggest problem has been that of reproduction and in order to overcome it we must have better breeding and better brooding. Both of these subjects will be given much attention in our project work for this year. Other important subjects will include better breeding and management and better selection.

"The 10 highest pens in the Puyallup laying contest last year averaged better than 260 eggs, indicating that we are getting less than half the egg production that we should have since the average lay of Washington flocks is hardly over 85 eggs per hen. There are very few farm flocks that will average 260 eggs per hen a year, but on the other hand most of the commercial flocks are getting that much or more and it is possible for a greater percentage to reach the mark. Some tell me that it will take as long as 15 years to make such an average, but I tell them it will be well worth the while if it does. It will mean an increase of more than 50,000,000 eggs in King county alone.

Wet Litter

The changing of the straw in the pullet pens is the hardest labor connected with poultry handling, according to George R. Shoup, western Washington experiment station poultryman. Pullets under high production have a very soft excretion, due to the large amount of kale, milk and water which they consume. This thin semi-liquid discharge gives off moisture continuously, which on very cold, freezing nights condense on the walls and roof in the form of frost. When this frost melts from the heat of the sun during the day large globules of water collect on the walls and roof and gradually drop onto the straw. When the straw becomes so saturated that it is heavy and does not rattle when moved with the foot it is time to change it, otherwise the grain and sprouted oats fed in the litter are contaminated and cause serious digestive troubles as well as making the grain unpalatable. The most durable straw is that of oats, but the wheat straw is the drier and has the best absorbing qualities. It takes about 100 pounds of straw for each 100 birds each time the litter is changed and, as it has to be changed about 25 times a year, it will require 2500 pounds of straw for each 100 pullets. The litter in the old bird pens needs changing only once a month, even in winter, due to low production, while the pullet pens, under good ventilation conditions, will last 10 days to two weeks.

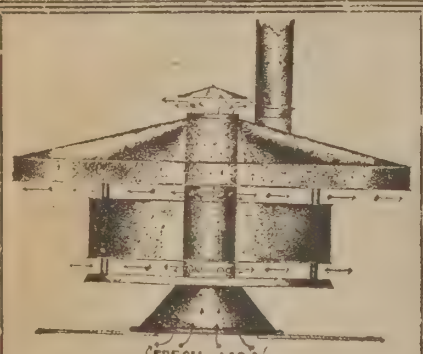
If the ventilation at night is so arranged that a continuous current of air is driving across the floor from intakes close to the floor line, and is carried out through the roof ventilators, much of the moisture generated in the coop is carried out by the circulation and hence does not condense on the walls. The roof ventilators should be at the highest peak of the roof and so arranged that there is the least possible obstruction to the air currents. The intake for the air should be as close to the floor line as possible, so as to move the air on the floor. If the floor area is not sufficiently ventilated by leaving the front curtain up six or eight inches, open a few of the rear windows under the dropping boards after the birds have gone to roost and close them again in the morning, to prevent draughts on the birds while on the floor.

Legs Weak, Pullets Die

Please give a remedy for weak legs in pullets. My pullets, hatched March 15, did well until about three weeks ago, when they got so weak in the legs that they could not use them, and finally died.

Auburn, Wash. H. S. P.

I know of no treatment for this condition when it develops in birds that are not laying, since when birds show the paralysis they are too far gone to bring about a recovery. The most satisfactory way of controlling this trouble is by way of prevention. Preventive measures should include proper system of yarding, so that the birds are not permitted to run on the same yards year after year, as well as judicious feeding. If the fowls are fed a considerable amount of concentrated food, as is generally supplied in the form of a mash, they will be predisposed to the development of limb paralysis.



The leg weakness, or limb paralysis, shown by pullets that are laying, is of a different nature than the above described condition. The paralysis in this case seems to be associated with egg production. Birds affected with this type of paralysis generally recover in a day or two without any medication whatsoever. A more satisfactory recovery is brought about if these birds are placed in a warm room until fully recovered.

W. T. JOHNSON,
Western Washington Experiment Station.

MATING THE GUINEA.

Can you give me any information as to the mating time of guinea fowls? M. S.
Tenino, Wash.

Guineas should be allowed to run at large with the males much the same as chickens. The eggs require three weeks for brooding and the nest should be made on moist earth. If the hen is allowed to set on a nest built on dry soil the eggs will require longer to hatch. As a general rule the guinea is unreliable and is often hard to reproduce. The meat is dark and by some people is considered very delicious, resembling that of wild fowl.

If You Are Going to Brood

anywhere from 200 to 1500 BABY CHICKS and would like to have a SYSTEM that will furnish all the WARM FRESH AIR required, no matter what the climatic conditions may be, write us for our

GENERAL ADVERTISING

Simple Mixture Makes Hens Lay

Beautiful Silverware offered Free to Introduce Remarkable Discovery of Kansas City Chemist to Two Million Readers.

Any reader whose hens loaf through the moult or winter season can easily, quickly and surely double his profits by doubling his egg yield through the remarkable discovery of a Kansas City chemist.

To introduce this amazing discovery to two million poultry raisers within the next two months a beautiful Rogers nickel-silver teaspoon like that illustrated here will be given absolutely free with every package. Readers who take advantage of the offering at once will also be shown how to get complete sets of silverware free of cost.

This wonderful discovery consists of powdered buttermilk and other valuable ingredients prepared in tablet form, and is called "Combs' Buttermilk Compound." Simply feed in drinking water or mix with feed. Users report increases of two to three times as many eggs.

Within ten days after feeding it to your hens you will notice a marked improvement, and within three or four weeks every loafer should become a layer. Your flock will have healthy red combs and go strutting and cackling about full of life.

So confident are the distributors of this discovery that it will make you money and please you in every way that they offer to send a regular $2.50 package and free Rogers spoon at the special introductory price of $1, with the understanding that it costs you nothing if not entirely satisfactory.

Send no money: Simply your name and address—a card will do—sent to the Milk Products Co., 138 Broadway Bank bldg., Kansas City, Mo., will bring you the regular $2.50 package and the free Rogers teaspoon by return mail. Use the tablets 30 days. If your hens are not laying 2 or 3 times as many eggs and you are not satisfied return the empty package within 30 days and your money will be returned. You will have had the use of the tablets for nothing, and may keep the spoon free of charge. This offer is fully guaranteed. Write today.—Adv.

Crown Gall on Red Raspberries

By ARTHUR FRANK,
Western Washington Experiment Station.

Crown gall on red raspberries during the season just past has become increasingly prevalent in western Washington. The trouble has been common on bush blackberries for some years. Many new raspberry fields had been set during the last two years with plants taken from old and neglected fields in which the disease was present. These new fields in many cases were entirely ruined the first year by the growth of the disease. The use of plants from an infected field is the most common way for the disease to be acquired and spread. On raspberry plants the disease tends to spread rapidly because of its being easily dragged from plant to plant in the row through cultivation.

The disease shows as a gall or galls on the roots, on the crown of the plant, or as an outgrowth of galls above ground on the canes. The canes are killed before bearing time. The roots may survive for some seasons.

The disease is caused by a species of bacteria. The bacteria and their products cause the production of the gall on the plant. As the bacteria live entirely within the tissues and are thus protected from outside influences, there is no treatment that can be applied that will reach them. The remedy is to take out all diseased plants and burn them. Do not replant on the same ground for at least three seasons. For setting out fields use only inspected plants that have come from fields in which there is none of the disease.

Crown gall at crowns of red raspberries.

Crown gall at crown and also on canes of red raspberries.

Protect the Birds

Not all birds are friends of the farmer and orchardist in the destruction of insect pests, but most of them are, especially the smaller species. The eagle, the hawk and some others feed on other birds and, therefore, upon chickens, young turkeys and other domestic fowls, but varieties like blue birds, robins, barn swallows, warblers and many others feed largely on insects and seeds gathered from weeds.

It is estimated by the government statisticians that nearly $1,000,000,000 is lost to the agricultural interests of the United States every year on account of insects. Were it not for the birds the loss would be very much greater. Even those birds that we think of as enemies doubtless, upon the whole, do more good than harm.

Take the crow, for instance. When a boy I used to feel that when I had killed a crow I had done something worth while, because he pulled up the young corn, ate the eggs of other birds and also ate hen's eggs, provided a hen was unfortunate enough to hide her nest out and the crow found it. From the hen viewpoint it probably made little difference whether the crow got the eggs or whether we got them, but it made some difference to us, so the crow was our enemy. Later in life I learned that the crow ate insects, grubs, cutworms, mice, gophers and young rodents in general, and that he did much more good than harm. G. L.

GET READY FOR SPRAYING.

If you are not already familiar with the sprays needed and the proper methods of applying them in your orchard at just the right season, spend a few winter evenings studying on this subject.

Lower Machine Prices

—a factor in a brighter outlook for 1922

MOST of the readers of this paper know that we have reduced our prices on farm machines for 1922. The lower figures apply on practically our entire line of grain, hay, and corn harvesting machines, plows, tillage implements, seeding machines, etc.

Reductions in prices of farm machines and other articles the farmer buys is one of the many indications pointing to continued improvement in the farmer's situation. The War Finance Corporation is steadily pouring aid from its billion dollar fund into agricultural communities to finance the farmer. Freight rate reductions on stock, grain, hay, etc., now going into effect, will save many millions for the farmers. Land values are now on a sounder basis. For 1922, better labor at lower cost will be available, better marketing conditions are being evolved, and recent tariff legislation also should tend to increase farm product prices.

All these factors indicate that more efficient production by modern methods and improved machines will mean greater profit for the new year. You cannot afford to postpone the purchase of needed machines. Where repairs have been made again and again, beyond the point of serviceability, waste and loss are pretty sure to follow. The present prices will enable you to replace the old with efficient modern machines so that best use may be made of the opportunities that are certain to come to the farming world.

National Master's Address

(Continued from page nine.)

Has not the time come for the national grange to employ equally business-like methods in strengthening the ties of practical fraternity all down the line?

The National Grange Monthly.

Another year's good work has been done by our official magazine, the National Grange Monthly, which comes to us all regularly every month with the earnest story of grange progress and undertakings. In many respects this has been the most trying year in the history of the magazine, because of the general conditions of the country which it has had to encounter, but the detailed report that will later be given by its board of managers will nevertheless be most encouraging and will certainly be heard with keen satisfaction by all our members, who have come to regard the National Grange Monthly as one of the most tangible assets of our organization.

Much earnest planning and the exercise of the most frugal methods has been necessary this year and will continue to constitute the administrative policy of the magazine. We are remembering, however, that a magazine property has been built up, with its high grade mailing list of more than 60,000 names, its excellent equipment and such widespread support as it receives from its readers, which, if owned by a private concern, would be classed as a valuable property. Surely our monthly magazine has stimulated better grange work everywhere and constitutes an unsurpassed vehicle for the dissemination of grange plans and facts among our membership. The national grange can well afford to back its official magazine to whatever extent may be necessary and I bespeak for it the hearty support of the patrons everywhere.

In Memory.

Beyond the veil that hides the future we believe there is a glorious sunshine and that our loved ones live in perfect happiness and trust in each other, with no clouds of distrust, hatred or greed. May a measure of God's infinite wisdom come to us here that our earthly service may entitle us to participate in the glorious sunshine of a bright hereafter. May we always remember the beauty of the lives of those who have finished their work on earth. "Behold I come quickly; and my reward is with me; to give every man according as his work shall be."

From the founders of our order to the present time what a wonderful service has been rendered—what a valuable inheritance is ours. May each of us, when we gather on the golden harvest floor of our eternal home, bear many sheaves of grain.

The grim reaper has been very merciful to us in the last year. Seldom, if ever, have there been so few deaths in our order, for which we can all be devoutly thankful. Last year nine former members of this body were called to lay down their implements on earth, but in the last 12 months there have been but three deaths in our national grange official list.

Sister E. Electa Bowen of Connecticut, past Pomona of the national grange, and Sister Mary J. Belcher, wife of Past Master Andrew M. Belcher of Rhode Island, have passed into the great beyond during the year. Brother W. N. Giles, master of the New York state grange, passed to the grange above shortly after the meeting of the New York state grange, having served but a little more than one year.

Our usual memorial services will be conducted by the worthy chaplain on Sunday afternoon and I trust that each one of us will feel it a sacred duty to pay a last tribute of respect by attending thereon. May our own good fortune make us mindful of others' sorrows.

Obligations of the Order.

Out of the difficulties arising in the Washington state grange has come the necessity for a clearer understanding of our individual obligations as members of this great fraternity and I deem it my duty, as master of the national grange, to speak to you with the utmost frankness concerning it.

When a member of the grange takes the obligation it binds him in no way as to his religious or political affiliations. Each application is specific on this point, with definite assurance always given to the candidate before the obligation is administered. No matter what our members may be—Protestant, Catholic, Jew or Gentile—they come together as members of one great agricultural body. The same holds true in regard to political beliefs, but when a member is installed as a grange officer he takes a very different obligation, pledging himself not to use the office to influence in any way the political or religious beliefs of any one else, and any installed officer who does so invites upon himself the penalty. This in no way prevents a grange officer from exercising the full right of franchise in voting for whomever he or she may choose, but it does prevent such officers from taking active part in any party movement. As an officer of a grange, and especially so far as the state master's position is involved, it is absolutely impossible for such an officer to wholly divorce himself from his position, and whenever any reference to his attitude or his words is made in the newspapers and elsewhere they are al-

POULTRY—Baby Chicks (Continued) 174

YESTERLAID EGG RANCH, KENT, WASH. Dear Sirs:—It may interest you to know that only last week I was offered $2.50 each for my flock of 459 Yesterlaid pullets. I turned this attractive offer down, as I know from the way they are laying that I could not afford to let them go. I raised these birds out of the 1000 chix got from you last spring, and am so well pleased with their performance that I want you to be sure to reserve me another 1000 chix for delivery about March 31st, next. Please let me have your early confirmation of this order for which check is enclosed. Yours truly, Walter Smith, Kent Wash. The above is one of the many testimonials we receive. 12,000 of these kind of chicks hatched every five days from our own eggs. Over 40,000 already sold. Order day-old chicks and hatching eggs now. Yesterlaid Egg Ranch, Kent, Wash.

BABY CHICKS FROM PETALUMA ELECtric incubator have "pep" that surprises customers. Electricity is life. Modern poultrymen are rapidly adopting our system with splendid results. Safe, efficient, economical, better chicks. Hatch for yourself or get chicks from hatcheries using Petaluma incubators. Write for our free catalog. Petaluma Electric Incubator Co., Petaluma, Cal.

CRYSTAL WHITE POULTRY FARM—BREEDers of S. C. White Leghorns; baby chicks a specialty; hatched from eggs laid by our great egg producers. Price, $17 per 100; $160 per 1000. Order early to get the best dates. Send for circulars. Mr. and Mrs. Jno. Eborall, McMinnville, Ore. Box 33.

TRACK'S END

By HAYDEN CARRUTH

A Stirring Story of Adventure

(Copyright by Harper & Bros.)

CHAPTER IV.

We prepare to fight the Robbers and I make a little Trip out to Bill Mountain's House: after I come back I show what a great Fool I can be.

The next minute I was back in the depot reading this letter to the others. When I had finished they all looked pretty blank. At last Jim Stackhouse said:

"Well I'd like to know what we're going to do about it?"

Tom Carr laughed. "If they come it will be the duty of the street commissioner to remove 'em for obstructing the car lines," he said.

I don't think Andrew understood this joke, though the rest of us laughed, partly, I guess, to keep up our courage.

"Well," went on Carr, "there's one thing sure—we can't send them five thousand dollars even if we wanted to; and we don't want to very much. I don't believe there is a hundred dollars in the whole town outside of Clerkinwell's safe."

"What do you suppose there is in that?" asked Baker.

"There might be a good deal and there might not be so much," said Carr. "I heard that he saved $20,000 out of the failure of his business back east and brought it out here to start new with. He certainly didn't take any of it away with him, nor use much of it here. He might have sent it back some time ago, but it hasn't gone through the express office if he did."

"Nor it hasn't gone through the post-office," said Frank Valentine. "I guess it's in the safe yet, most of it."

"Very likely," answered Carr. "But even if it is I don't believe Pike and those fellows would know enough to get it out unless they had all day to work at it; and what would we be doing all that time?"

"Shooting," said Jim Stackhouse; but I thought he said it as if he would rather be doing anything else. I didn't know so much about men then as I do now, but I could see that Tom Carr was the only man in the lot that could be depended on in case of trouble.

"Well, how are we fixed for things to shoot with?" went on Carr.

"I've got a repeating rifle," answered Valentine. "So have you, and so has Cy. I guess Sours left some shooting-irons behind, too, didn't he, Jud?"

"Yes; a Winchester and a shotgun," I replied.

"There are some other shotguns in town, too," continued Valentine. "But I guess the best show for us is in Taggart's hardware store. When he went away he left the key with me, and there's a lot of stuff boxed up there."

"Go and see about it and let's pull ourselves together and find out what we're doing," said Carr. "I think we can stand off those fellows all right if we keep our eyes open. I suppose they are up at the headquarters of the old Middleton gang on Cattail creek, the other side of the Missouri. The men that went through here with that pony herd last fall were some of them, and the ponies were all stolen, so that Billings sheriff said. I guess Pike has joined them, and I should think they would suit each other pretty well."

In a little while Valentine came back and said he had found a dozen repeating rifles, and that he thought there were more in some of the other boxes. There was also plenty of cartridges and some revolvers and shotguns.

"That fixes us all right for arms," said Carr. "Before night we must organize and get ready to defend the town against an attack if it should come; but I think the next thing is to send a letter out to Mountain's house and put it where they will look for the money, warning them to keep away if they don't want to be shot."

"Yes," answered Valentine, "that will be best. Write 'em a letter and make it good and stiff."

Tom went into the back room and soon came out with a letter which read as follows:

Track's End, December 16.

To D. Pike and Fellow-Thieves—You will never get one cent out of this town. If any of you come within range you will be shot on sight. We are well armed, and can carry out our share of this offer.

COMMITTEE OF SAFETY.

"I guess that will do," said Tom. "There isn't any poetry in it, but I reckon they'll understand it. Now, Jud, what do you say to taking it out and leaving it on Mountain's door?"

"All right," I answered; "I'll do it."

"Probably Jim had better go along with you," said Carr. "I don't think any of them are there, but you can take my field-glass and have a look at the place when you get out to Johnson's."

We all went to dinner, and by the time Jim and I were ready to start the sky had clouded over and threatened snow. I said nothing, but slipped back into the hotel and filled my pockets with bread and cold meat. I thought it might come handy. It was so cold and the snow was so deep that we had decided to go on foot instead of horseback, but we found it slow work getting along. Where the crust held us we made good time, but most of the way we had to founder along through soft drifts.

At Johnson's we took a long look at Mountain's with the glass, but could see no signs of life. It began to snow soon after leaving here, and several times we lost sight of the place we were trying to reach, but we kept on and got there at last. The snow was coming down faster, and it seemed as if it were already growing dark.

"It isn't going to be very safe trying to find our way back tonight," said Jim. "Let's see what the prospect for staying here is."

We pushed open the door. It was a board shanty with only one room, and that half full of snow. But there was a sheet iron hay stove in one end and a stock of hay outside. I told Jim of the food which I had brought.

"Then we'll stay right here," he said.

"They're not going to starve here."

"It's 10 to 1 that we miss the town if we try to go back tonight. Our tracks are filled in before this."

We set to work with an old shovel and a piece of board and cleaned out the snow, and then we built a fire in the stove. We soon had the room fairly comfortable. The stove took twisted hay so fast that the work did more to keep us warm than the fire.

We divided the food for supper, leaving half of it for breakfast. It made a pretty light meal, but we didn't complain. I wondered what we should do if the storm kept up the next day, and I suppose Jim thought of the same thing; but neither of us said anything about that. I sat up the first half of the night and fed the fire, while Jim slept on a big dry goods box behind the stove, and he did as much for me during the last half.

It was still snowing in the morning. We divided the food again, leaving half of it for dinner, which left a breakfast lighter than the supper had been. We were a good deal discouraged. But soon after noon it stopped snowing and began to lighten up. It was still blowing and drifting, but we thought we might as well be lost as to starve; so we left the letter behind the board on the door and started out.

We got along better than we expected. The wind had shifted to the northwest, so it was at our backs. We passed Johnson's deserted house and finally came within sight of the town through the flying snow. We were not 20 rods from the station when suddenly Jim exclaimed:

"Why, there's a train!"

Sure enough, just beyond the station was an engine with a big snowplow on it, with one freight car and a passenger car. A dozen men with shovels stood beside it stamping their feet and swinging their arms to keep from freezing. There were faces at the car windows, and Burrdock and Tom Carr were walking up and down the depot platform. We came up to them looking pretty well astonished, I guess.

"When I got to the Junction yesterday I got orders to take another train and come back here and get you folks," said Burrdock in answer to our looks. "Just got here after shoveling all night, and want to leave as soon as we can, before it gets to drifting any worse. This branch is to be abandoned for the winter and the station closed. Hurry up and get aboard!"

Jim and I were both too astonished to speak.

"Yes," said Tom Carr, "we were just starting after you when we saw you coming. We're going to take Sours' horses and the cow in the box car. I just sent Andrew over after them—and the chickens, too, if he can catch them."

I don't know how it was, but my face flushed up as hot as if it had been on fire. I felt the tears coming into my eyes, I was in that state of passion.

"Tom," I said, "who was left in charge of Sours' things?"

"Why—why, you were," answered Tom, almost as much astonished as I had been a moment before.

"Who gave you authority to meddle with them?" I said.

"Nobody. But I knew you wouldn't want to leave them here to starve, and I did it to save time."

"They're not going to starve here," I said, getting better control of my voice. "Call Andrew back this minute. You've neither of you the right to touch a thing that's there."

"But surely you're going with the rest of us?" said Tom.

"No, I'm not," I answered.

Tom turned and started toward the town.

"Now, don't make a fool of yourself, young man," said Burrdock. "This here town is closed up for the winter. You won't see the train here again before next March."

"The train won't see me, then, before next March," I said. "Jim, are you going with the rest of them?"

"Well, I'm not the fellow to do much staying," he answered.

I turned and started for the hotel; Burrdock muttered something which I didn't catch. I saw Andrew going toward the train, but without any of the animals. Tom came down the street and met me. He held out his hand and said:

"Jud, I admire you. I'd stay with you if I could, but the company has ordered me to come, and I've got to go. But it's a crazy thing for you to do, and you'd better come along with us, after all."

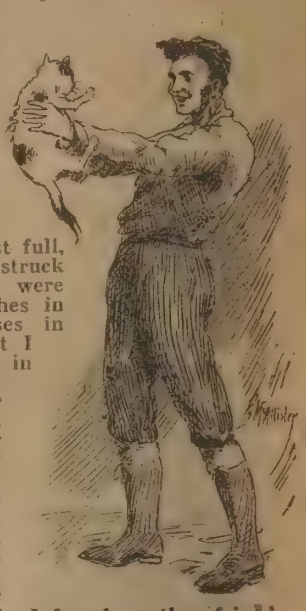
"No," I said, "I'm going to stay." (It was a foolish pride and stubbornness that made me say it; I wanted to go already.)

"Well, good-by, Jud."

"Good-by, Tom," I said.

He walked away, then turned and said: "Now, Jud, for the last time: Will you come?"

"No, I won't!"



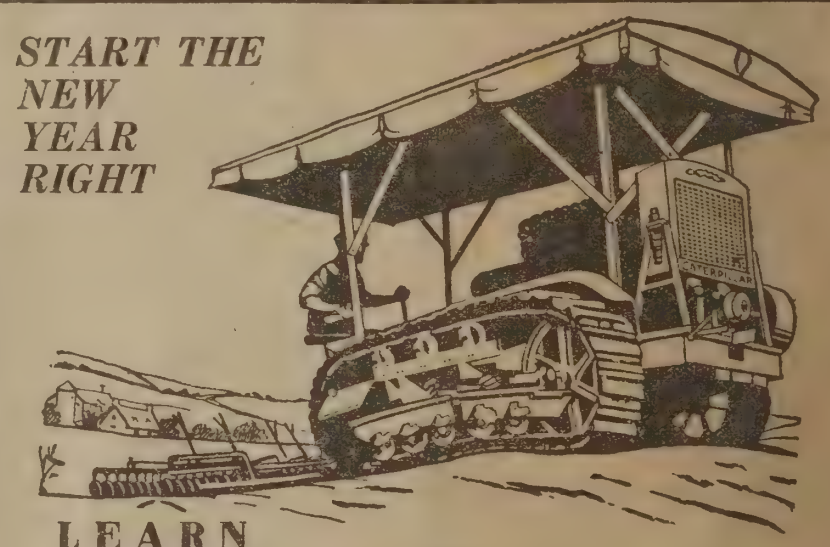
In another minute the train rolled away, with Tom standing on the back platform with his hand on the bell-rope ready to pull it if I signaled him to stop.

But I didn't. I went on over to the headquarters house. It was beginning to get dark; and the snow was falling again. The door was stuck fast, but I set my shoulder against it and pushed it open. The snow had blown in the crack and made a drift half way across the floor. I put my hand on the stove. It was cold, and the fire was out.

CHAPTER V.

Alone in Track's End I repent of my hasty Action: with what I do at the Headquarters House, and the whole Situation in a Nutshell.

When I came to think of it afterward I thought it was odd, but the first thing that popped into my mind when I saw that the fire had gone out was that perhaps there were no matches left in the town. I ran to the match safe so fast that I bumped my head against the wall. The safe was almost full, and then it struck me that there were probably matches in half the houses in town, and that I even had some in my pocket.



I found another friend.

I went over and peeped out of one corner of a window pane where the wind had come in and kept back the frost. The snow was driving down the street like a whirling cloud of fog. I could hardly see the bank building opposite. An awful feeling like sinking came over me as I realized how matters stood; and the worst of it was that I had brought it upon myself. I rushed into the dining room and looked out of a side window to see if the train might not be coming back; but there was only the whirlwind of snow. I went back in the office and threw myself on a lounge in one corner.

If any one says that I lay there with my face in a corn-husk pillow and cried as if I were a girl, I'm not going to dispute him. If any girl thinks that she can cry harder than I did, I'd like to see her try it. But it, or something, made me feel better, and after a while I could think a little. But I could not get over knowing that it was all my own fault, and that I might be riding away on the train with friends, and with people to see and talk to. I realized that it was all my quick temper and stubbornness which was to blame, and remembered how my mother had told me that it would get me into trouble some day. "If Tom hadn't come at me so suddenly," I said out loud, with my face still in the husk pillow, "I'd have agreed to it. Dear old

START THE NEW YEAR RIGHT

LEARN

Auto and Tractor, Battery and Ignition Work, Oxy-Acetylene Welding, Tire Vulcanizing, Airplanes—engines and flying, and learn these trades in the most practical trade school in America. Lathe and machine shop work taught in the Spokane school.

UNDER AMERICA'S GREATEST TRADE SCHOOL SYSTEM

Only automobile and tractor school system outside of the state of Missouri which was approved and employed by the United States government war department to train soldier auto mechanics.

Golden Winesap

A Wonderful Apple

It has the juicy tartness of the Jonathan, the meatiness of the old Winesap, the beauty of the Winter Banana, the deep gold color of the Grimes and the keeping qualities of the good old Ben Davis. Strong grower, healthy and vigorous. Originated in Utah and should be hardy everywhere. Bears young and very profusely.

True Delicious Apple

This is the ideal farm apple. Large fruit, beautiful dark red, quality unsurpassed. Flavor sweet, slightly touched with acid, comes out of storage in perfect condition.

Campbell's Early Grape

A new variety, vigorous growth, very hardy, very early and an abundant bearer. Good shipper; keeps for weeks after ripening.

Perfection Currant

In our entire experience this is the best bearer, the largest, sweetest and easiest to pick. Rich, mild flavor, less acid and few seeds.

Low Prices Direct to You (32)

All kinds of Fruit Trees, Plants and Shrubs, Vegetable, Flower and Field Seeds, etc., of the best quality, at very low prices. Get our Big Free Illustrated Catalog and prices before you buy.

Tom, he meant all right, and I was a fool!"

When at last I sat up I found it was so dark that I could hardly see. The wind was roaring outside, and I could feel fine snow against my face from some crack. I was stiff and cold, and just remembered that I had not had above a quarter of a meal all day. I thought I heard a scratching at the door, and opened it. Something rushed in and almost upset me; then I knew it was Kaiser, Sours' dog. I was never so glad to see anything before. I dropped down on my knees and put my arms around his neck and hugged him, and for all I know I may have kissed him. I guess I again acted worse than a girl. I remember now that I did kiss the dog.

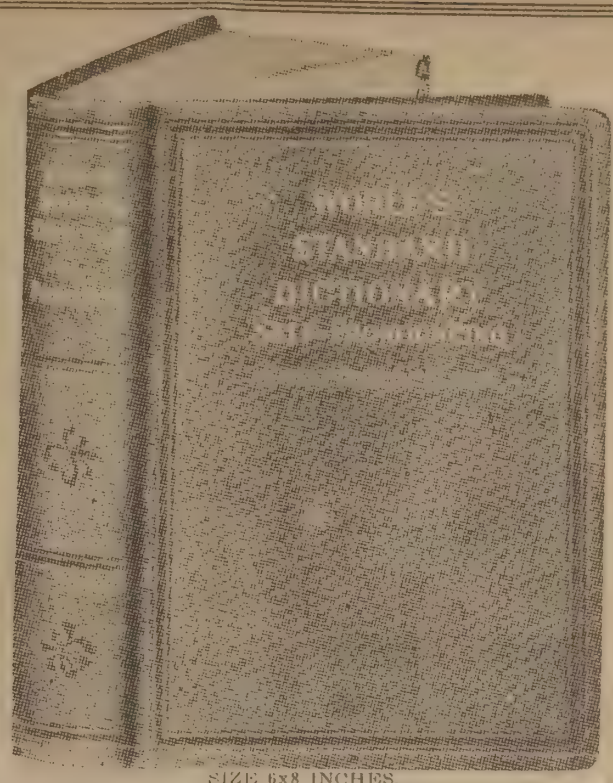
I got up at last and felt around till I found the match safe, and lit the wall lamp over the desk. I thought it made it so I could actually see the cold. Kaiser seemed warm in his thick coat of black hair, and wagged his tail like a good fellow. I don't know why it was, but I thought I had never wanted to talk so badly before. "We're glad they're gone, aren't we, Kaiser?" I said to him; then I thought that sounded foolish, so I didn't say anything more, but set to work to build the fire.

When I went to the shed at the back door for the kindling wood I found another friend, this time our cat, a big black and white one. I don't think I was quite so foolish about her as I had been about the dog, but I was glad to see her. After the fire was started I got a shovel and cleared the snow out of the office. Outside it was already banked half way up the door, and the storm was still raging.

As I turned from putting some coal on the fire I happened to see the hotel register lying on the desk. Another foolish notion seized me, and I took up the pen and as well as I could with my stiff fingers headed a page "December 17th," and below registered myself, "Judson Pitcher, Track's End, Dakota Territory." I think the excitement must have turned my brain, because I seemed to be doing silly things all the time.

But I managed to stop my foolishness long enough to get myself some supper; which I guess was what I needed, because I acted more sensibly afterward. Everything in the house was frozen, but I thawed out some meat, and ate some bread without its being thawed, and boiled a couple of eggs, and had a meal which tasted as good as any I ever ate, and with enough left for Kaiser and the cat, who was named Pawsy, though I can't imagine where such a name came from.

The office was by this time quite comfortable. I had brought a small table in from the kitchen and eaten my supper close to the stove. Though it was pitch dark outside, it was not yet 6 o'clock, and as I felt calmer than I had before, I sat down in front of the fire to consider how matters stood. I think I realized what I was in for better than before, but I no longer felt like crying. If I remember aright, it was now that I gave the first thought to Pike and his gang.



"Well," I said, speaking out loud, just as if there was somebody to hear me besides a cat and a dog, "I guess Pike won't do much as long as this storm lasts. But after that, I don't know. Maybe I can hide if they come." I thought a minute more and then said: "No, I won't do that—I'll fight, if I have a chance. They won't have any way of knowing that I am here alone, and if I can see them first I'll be all right." That is what I said; but I remember that I felt pretty doubtful about it all. I think I must have been trying not to let Kaiser know that I was afraid.

After a while I fell to thinking of home and of my mother. When I thought of how she would worry when she didn't hear from me, it gave me an idea of leaving Track's End and trying to make my way east to civilization. It seemed to me that with a few days of good weather I ought to be able to get through if no more snow came; though I had no idea how far I might have to go, since for all I knew Lac-qui-Parle might also be abandoned; and, even if it were not, I knew that it had no trains and that I would probably have to travel overland to the other side of the Minnesota line before I could reach a settlement with any connection with the outside world. I was before long very gloomy thinking about my troubles; then I happened to remember the horses and cow about which I had tried to quarrel with poor Tom Carr, and I put on my overcoat and went out to look after them.

I thought the wind would carry me away, and I had to shovel 10 minutes by the light of a lantern half blown out before I could get the door open. But when I did get in I found them glad to see me; and I was glad to see them. And while shoveling away the snow I had shoveled away my fit of the blues; and from that day to this I've taken notice that the best way to get rid of trouble and feelings you don't want is to go to work lively; which is a first-class thing to remember, and I throw it in here for good measure.

The cow mooed at me, and even the horses whinnied a little, though they were not what you might call children's pets, being broncos, and more apt to take a kick at you than to try to throw you a

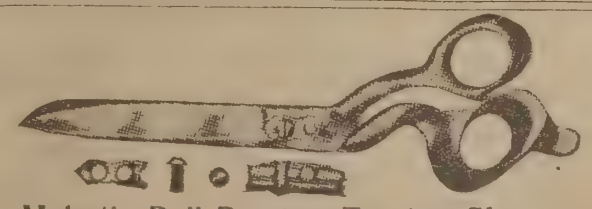
No farm home should be without The Twice-a-Week Spokesman-Review. It is truly the Farmers' Family Newspaper of the Pacific Northwest. By sending in now your own with two other yearly subscriptions at $1.50 per year (three total $4.50) you will get postpaid this handsome book.

Every One Should Have a Good Dictionary in Handy, Convenient Size

Get One of These for Your Own Use.

THE WORLD'S STANDARD DICTIONARY

is Concise—Accurate—Handy Size—Universal in Its Vocabulary—Encyclopedic in Its Information.



600 PAGES
1200 ILLUSTRATIONS
4700 DEFINED WORDS
BEST SEAL MOROCCO BINDING

The binding is just as flexible as you will find on any $5.00 Oxford Bible. Those who feel they can not afford an outlay of nine to twelve dollars for a big dictionary will find this World's Standard edition all that could be desired, and those who have big dictionaries will also find it a handy and convenient volume to have within their reach.

What most persons want when they go to a book of this kind is to know simply **how to pronounce a word, how it is spelled or what is its meaning** as most commonly or generally accepted and understood. This book supplies that need quickly.

Just send in three yearly subscriptions for The Twice-a-Week Spokesman-Review at $1.50—**your own** may count as **one**—and the World's Standard Dictionary will be mailed to you postpaid. Address:

TWICE-A-WEEK SPOKESMAN-REVIEW,
Review Bldg., Spokane, Wash.

Majestic Ball Bearing Tension Shears

With ONLY TWO Subscriptions.

This shear combines three features of special importance to shear and scissor users. **First,** especially designed with handles that actually fit the fingers like a glove; **second,** genuine ball-bearing, makes the shears run smoothly and cut cleanly; **third,** they will always stay sharp.

Every pair of Majestics has hardened, keen cutting edges, carefully ground, polished, highly nickel plated and brightly finished. The roller ball-bearing can not get out of order, as this ball-bearing is firmly held in proper position by an arrow tension spring.

Mailed to any one sending in two yearly subscriptions (your own may count as one) for The Twice-A-Week Spokesman-Review at the regular subscription rate of $1.50 per year. **SEND IN YOUR SUBSCRIPTION WITH ONE OTHER TODAY.**

FAMILY CIRCLE

ALICE BARLAND
EDITORIAL CONTRIBUTOR

Experience Letters

From Our Family Circle Women

Dear Mrs. Barland: To remove ink spots from white goods boil in water to which cream of tartar has been added; they will quickly disappear.

When frying eggs or anything where the grease pops out add a little flour to the grease and the popping will cease.

MRS. P. N. L.

I have never eaten a better pumpkin pie than one made by this recipe: One cup of pumpkin run through a colander, two well-beaten eggs (three make it better), one cup of sugar, a little salt, one teaspoon of cinnamon, just a speck of cloves, one full cup of rich milk. Bake with single crust till it is sure to be done clear to the middle. At least one-half of the pumpkin pies I eat at different places are not sufficiently baked. Have a moderate oven or your crust will burn before the filling is done. ALICE W. BARLAND.

Dear Mrs. Barland: Here are a few things you may publish if they will help some one. I will call it "What I found in the rag box and what I did with it." (This was a box of things which had been discarded by another woman as worthless.)

Out-grown middies which my 6-year-old has worn for one summer and which my 4-year-old will wear next summer. Men's shirts, which wore six months. Old blankets which made good filling for quilts and saved buying cotton. A night-dress with beautiful hand-made yoke, which, after mending, would last a year. Baby clothes, with lace and buttons all on, and one afternoon's work would have mended them all, and there were enough to have lasted a new baby an entire summer. Old sweaters, with pearl buttons, needing only new half sleeves and new pockets, and good aprons needing only a patch in front and a pocket.

I do not wish to criticize others for wasting, for no doubt I waste in some things, too, and I would like to see a department of "waste not, want not." I will give it a little start. Remove the steels from old corsets and use the goods for making brassieres or corset waists. One crocheted corset cover yoke will outwear six cloth bottoms. Do you put new ones on yours?

Good stocking legs will out-wear four feet; flour sacks will make waists, sheets, towels, pillowcases, underwear and aprons. Sugar sacks with rickrack braid will make tablecloths, dresses, underwear and curtains. Salt and meal sacks make nice handkerchiefs. MRS. W. J. W.

Dear Mrs. Barland: I am sending my receipe for soft yeast or "starter," hoping it will be of benefit to the sister from the east who is having trouble with her bread made of the western flour.

Boil four fair-sized potatoes in plenty of water till well done; mash, leaving in part of the water. Into a crock or other dish sift two tablespoons of flour, over this pour enough of the potato water to form a smooth paste, stirring well to keep the lumps out, and mix this with the mashed potato and run through a sieve if there are still any lumps. Add one-half cup of sugar and a small teaspoon of ginger, let stand till luke warm, then add two yeast cakes that have been soaked in a little luke-warm water. When the potato water is cool, but not cold, add the yeast and stir well and set in a warm place to rise over night.

When ready to set your bread sift into a pan the desired amount of flour, add salt and enough tepid water or milk to make the baking the size desired. Beat in a little of the flour to make a soft paste, then add your starter. Remember to keep out enough of this starter to add to the potato mixture the next baking. If your bakings are large, say about 8 or 10 loaves, keep out about one quart or half of the starter. If smaller, one pint is sufficient. After the bread rises the first time it is ready to mix into loaves. The starter should be kept in a cool place, but must not freeze and should be covered loosely. It isn't necessary to add any more yeast or ginger for the next baking, only the potatoes and sugar mixed with the starter you have saved.

If you have hops a cup of hop tea added to the first starter is good. W. G. W.

Your Health

By Royal S. Copeland, M. D., F. A. C. S.

Some morning, after you have finished your bath, wet a spot of the washcloth with alcohol and rub it over your neck. You will be amazed and shocked to see the black streaks of dirt on the cloth.

Dr. Copeland.

The skin is moist and somewhat oily. Dirt, dust and smoke cling to it. Unfortunately, many persons neglect the skin and never get it really clean.

You can not be clean if you merely give yourself a shower, or "a lick and a promise" with a teaspoonful of cold water.

When properly done, bathing is really manual labor. Unless you use lots of hot water, soap and "elbow grease," you can not be clean.

No matter how many shower baths you may take, you aren't clean in the real sense unless you have an occasional scrubbing with soap and washcloth or fiber sponge. On these occasions hot or very warm water, which is more solvent than cold, will assist your purpose.

Your face is entitled to at least two thorough cleanings each day. The more important time is just before retiring. No one should go to bed without taking to the pillow a clean face.

Give your face several washings. Let the first be hot water—lots of it—and soap—lots of it. Rub and scrub and use your washcloth. Empty this dirty fluid and fill the basin again, repeating the soaping and washing. Then rinse your face and neck with clean water, letting it run cold if you enjoy the after-glow of a cold dip.

In the morning there is not the need of such a thorough performance, but soap and water should be vigorously applied to the face, neck and ears. The crack back of the ears should not be neglected. This is a sensitive bit of skin, but it should be gently reached with the washcloth.

You ought to take a general bath at least twice a week. Every day is better, but not always possible. Even if you take a shower bath daily, do not forget that you need regular scrubbing in addition.

The hands should be washed with soap and water before each meal. If you do this before touching food, and if you keep your face and the openings of your nostrils clean you will escape some serious ailments.

We learned during the influenza epidemic that that particular disease is hand-carried.

Cleanliness is one of the greatest factors in making for health, and for the appearance of health.

Just Folks

Two great forces keep the world alive.

The two forces are made up of easy-going people and uneasy-going people, the restful and the restless, the quiet and the loud, the satisfied and the ambitious, the "let well enough alone" and the "let nothing alone."

Between these extremes are the great body of men and women who are carrying on the every-day work of the world.

The harder the job the more keen must be the ambition for accomplishing.

The longer the search, the more concentrated must be the purpose.

The more difficult the undertaking the harder must be the fight.

Hence the need of patience with those who seem to overdo.

Hence the need of whole-hearted support for those with whom you can not wholeheartedly agree.

Hence the need of subduing antagonism with cooperation.

Hence quiet pleasures and sweet content must be regarded as incidents of life.

Hence we are not to think out our own salvation to the extent that we forget to work out our own salvation.

Hence is the need of fear and tremblings in working out that salvation.

Hence many tasks have to be performed without formal plans, and hence is the need of welding thought and work. E&S

"Old friends are best"

HOOD RUBBER FOOTWEAR

-HOOD- footwear is *scientifically* made. There is a most complete and exhaustive series of working tests required before any item can be added to the -HOOD- Line. These tests narrow down to the three -HOOD- major tests, as follows,—

Is it durable

Durability, long wear under hard service, is the first -HOOD- consideration. The Hood Pressure Process was developed to meet this requirement—an exclusive process which welds all parts of the shoe together, *to stay*. Materials are selected to this end. And the first shoes are tried out under actual working conditions, over a long period, to prove their merit and establish standards of manufacture.

Is it comfortable

It is not enough that a shoe or a boot wear well. It must be comfortable, as easy on the feet after a long day as when first put on. A reinforcement here and there to increase wear, may change the "feel" of the shoe. Here again -HOOD- designers are given a thorough checking, under working tests.

Will it do the work required

A shoe may wear well and feel good, and still leave something to be desired in exactly meeting your requirements. No shoe, boot, rubber, or gaiter enters the -HOOD- Line without a special use, and this use, together with the best methods of meeting it, is thoroughly examined and tested by experts in their field before the recommendations are finally accepted.

So that before a -HOOD- shoe leaves the factory, everything that is humanly possible has been done to make that shoe the best shoe that you can buy.

You Need a Farm in Canada

If you are to secure that independence, success and prosperity which has been the reward of thousands of American farmers who have preceded you.

¶ These farmers knew of the rich tracts of Canadian Pacific agricultural land for sale in Western Canada at low prices—open prairie, partially wooded or park lands—all virgin, fertile and productive. They knew they could not obtain such lands elsewhere at such prices—at an average of $18 per acre.

¶ They knew that Western Canada has carried away, year by year, first international honors for wheat, oats, barley and livestock.

¶ They knew of the success that had been won by farmers from their own state who had preceded them. They knew that Canadian farm values are steadily increasing and that each year they delayed they would have to pay more to purchase desirable farms.

¶ They wanted larger holdings for their growing families. They knew they could secure sufficient land upon terms unobtainable elsewhere —20 YEARS TO PAY.

¶ As a result, 16,000 American farmers took advantage of their knowledge and moved to Western Canada last year.

¶ In Canada the government and the railroads help the farmer in every possible way. It is to their interest to do so. Taxes are moderate; laws are just; transportation facilities and markets are excellent. Language, social customs, religion, money and other conditions are the same as in the United States.

Ask the Canadian Pacific about Canada

Thousands of American farmers have made prosperous homes in Canada. There will be more this year. Can you afford not to follow them?

Investigate these facts for yourself and let us fill your need. Write today for information to

Bits of Fun for Everyone

Lesser of Two Evils.

The roughneck politician burst into the lawyer's office and in an excited manner asked:

"What would you do if a paper should call you a thief and a liar?"

"Well," said the lawyer, "if I were you I'd toss up a nickel to see whether I'd reform or pay no attention to the statement."—Minneapolis Tribune.

First-Class Postage.

Wife—I ordered a bathing suit by mail today.

Husband—I suppose you enclosed a stamped and addressed envelope.—Boston Transcript.

Doomed.

Representative Caraway of Arkansas said of a man who had failed:

"He was doomed to fail. His life has been, in fact, nothing but a series of failures. The first chapter of this series began in an insurance office where he obtained his first job, that of office boy. He had only just begun on this job, when his boss looked up from an important letter one morning and said irritably:

"'Don't whistle at your work, boy.'

"'I ain't workin', sir,' he answered; 'I'm only just whistlin'.'"

Very Singular, Indeed.

"How'd you break your arm?"

"Accident."

"What happened?"

"Broke it trying to pat myself on the back."

"What for?"

"Minding my own business."

Old Cat!

Miss Withers—Didn't Mr. Close say to you as I entered the room last night: "Is that the beautiful Miss Withers?"

Miss Sweetley—Yes, dear, with the accent on the word "that."

Not in the Winter.

"Would you marry a girl who wore a roll in her stocking?"

"That would depend on the size of the roll."

Latest High Class Patterns for the Home

Please order the patterns you desire at least two or three weeks before you wish to use them. Desiring to obtain the latest high-class patterns for its readers, THE FARMER has made arrangements to have them sent direct from the east, and under present mailing conditions it takes about that time for them to reach you.

3623. Ladies' apron. Cut in four sizes: Small, 34-36; medium, 38-40; large, 42-44, and extra large, 46-48 inches bust measure. A medium size will require 3 3-8 yards of 36-inch material. Price 10 cents.

3622. House or porch dress. Cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. A 38-inch size will require seven yards of 27-inch material. The width of the skirt at the foot is 2 1-2 yards. Price 10 cents.

3835. Ladies' blouse. Cut seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. A 38-inch size requires 2 3-4 yards of 36-inch material. Price 10 cents.

3429. Girls' dress. Cut in four sizes: 4, 6, 8 and 10 years. A 6-year size will require 3 1-2 yards of 36-inch material. Price 10 cents.

3814. Girls' dress. Cut in four sizes: 6, 8, 10 and 12 years. A 10-year size will require 2 1-4 yards of 27-inch material for the guimpe and 3 1-4 yards for the dress. Price 10 cents.

3579-3570. Ladies' costume. Waist 3579, cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. Skirt 3570, cut in six sizes: 24, 26, 28, 30, 32 and 34 inches waist measure, and requires three yards of 54-inch material for a 28-inch size for the skirt and three yards of 36-inch material for the waist for a medium size. The width of skirt at the foot is 3 1-2 yards. Two separate patterns, 10 cents for each pattern.

3837. Ladies' dress. Cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. To make the dress for a size 38 bust measure will require 4 1-4 yards of 40-inch material. Price 10 cents.

3592. Misses' dress. Cut in three sizes: 16, 18 and 20 years. An 18-year size will require five yards of 40-inch material. The width of the skirt at the foot is two yards. Price 10 cents.

3411. Girl's coat. Cut in five sizes: 6, 8, 10, 12 and 14 years. A 10-year size will require 3 1-2 yards of 44-inch material. Price 10 cents.

3816. Child's dress. Cut in four sizes: 2, 3, 4 and 5 years. A 3-year size requires 2 1-2 yards of 36-inch material. Collar, cuffs, belt and pockets of contrasting material require five-eighths yard. Price 10 cents.

3839. Ladies' dress. Cut in six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. A 38-inch size will require five yards of 40-inch material. Price 10 cents.

3840-3823. Ladies' costume. The blouse 3840, cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. It will require 3 3-8 yards of 40-inch material for a medium size. The skirt 3823 is cut in seven sizes: 26, 28, 30, 32, 34, 36 and 38 inches waist measure. It will require 2 3-4 yards of 44-inch material for a medium size. Two separate patterns, 10 cents for each pattern.

High Points in News of the Week

With a view to formulating measures to meet the farm situation and to work out a permanent policy for the development of a self-sustaining agriculture, Secretary of Agriculture Wallace, at the request of President Harding, will soon call a conference of farmers and representatives of allied interests. This conference probably will be held in Washington, D. C., about the middle of this month. It is probable that the conference will consist of between 100 and 150 persons to be personally selected by Secretary Wallace.

In a recent address Secretary Wallace enumerated 11 points which he considered vital in the rehabilitation of farming. It is probable that these points will constitute the center of consideration in the coming conference. They are briefly as follows:

(1) More thought in the administration of credit machinery; (2) adjustment of credit based upon the seasonal character of farm production; (3) improved marketing through cooperative organization; (4) lower transportation cost for farm products; (5) collection of statistics on production and consumption at home and abroad with a view to better balanced and more stable production of farm crops; (6) limitation or extension of cultivated acreage on the basis of profit in farming or live stock production; (7) far-reaching study of the cost of production and marketing of farm crops; (8) a study of the forces which influence prices; (9) a study of foreign markets with a view to prompt disposition of surplus crops; (10) the maintenance and development of soil fertility, and (11) federal supervision of such institutions as stockyards, market agencies, grain exchanges and the like.

* * *

Prospects for the coming year in general industry as well as agriculture are considered more hopeful than at the beginning of any year since the war.

"Our year of liquidation is over and we can look forward to a year of recuperation," said Secretary of Commerce Hoover in a formal statement New Year's eve. "We have got through the credit strain; we have absorbed the enormous surplus of goods carried over from the post-war boom; we are on much sounder foundation. We have a lot to be cheerful over and we have ahead of us very substantial hopes of improvement both at home and abroad."

Secretary of War Weeks in a similar statement says: "The rapidity with which the American people have been putting their affairs in order during the last few months makes the outlook for complete industrial adjustment and resulting prosperity in the coming year bright."

Secretary of Agriculture Wallace, while declining to make any hard and fast prophecy, mentioned the following as hopeful signs for greater prosperity during the coming year: Credit conditions are already improved; interest rates are somewhat less severe; freight rate reduction is already being made; cost of production will be lower than during the last year; a probable reduction in acreage of some crops may tend toward better prices; the attitude of farmers themselves is one of greater courage and energy; congress is giving much consideration to legislation for farm betterment; farm organizations are doing much to put industry on a sound basis; the general industrial and financial public is learning to recognize the needs of agriculture; those who have held onto their money during the recent depression, seeing more hopeful signs ahead, will begin buying with their savings, thus aiding in restoring better business conditions.

* * *

The last week was a somewhat discouraging one in the disarmament conference at Washington, owing to an apparent determination of the French delegates to retain for their country a higher state of arms than provided for in the plan previously worked out. France has refused flatly to limit her building of submarines. However, the conference apparently will be able to so limit the operation of submarines as to tend to make them less of a menace to the welfare of other nations.

There is no indication as to the exact date of adjournment of the conference, though it is probable that it will adjourn soon. The American delegates are making an effort to provide for future meetings of similar nature either at stated intervals or upon call to take up any questions vitally affecting two or more nations.

* * *

The Irish parliament is reconvening this week. Probably the first important matter to come before it will be the ratification of the peace agreement between England and Ireland. While the controversy is spirited, and in some cases bitter, indications are that the Irish people have impressed upon their representatives the advisability of accepting the terms.

* * *

United States Senator Boies Penrose of Pennsylvania, one of the dominant figures in the senate for many years, died of heart failure after a brief illness last week at the age of 61. Senator Penrose had been chairman of the finance committee of the senate.

* * *

Tariff makers in congress are resuming their work in redrafting the permanent tariff bill with a view to having it ready for debate on the floor of the senate early next month. The bill will specify tariffs on about 100,000 articles.

Farm Business and Markets Outlook

(Continued from page five.)

middle of January. Receipts at the four leading markets increased again so that the reduction in cold storage holdings was not as rapid as the trade hoped for. Fancy grades have been relatively scarce, while medium and undergrades have been plentiful, and the market for them almost demoralized. The final report on cold storage stocks for the entire country on December 1 at 65,138,000 pounds was practically the same as the preliminary report.

Prices for 92 score fresh butter on December 28 were as follows:

Chicago, 41c; New York, 41 1-2c; Boston, 42c; Philadelphia, 42c; San Francisco exchange quotation, 40 1-2c.

Holiday demand developed in the cheese market, bringing more activity than was present during the first half of December.

FRUITS AND VEGETABLES.

Apple shipments have been decreasing and about 80 per cent of them are coming from the boxed apple sections. Over one-third of all apples shipped this season have come from Washington. A 2 1-2 Baldwins are quoted at $6.50 to $7.50 and Greenings at $8.50 to $9.50 in consuming markets, while extra fancy northwestern Jonathans are bringing $2.25 to $3 per box.

Shipments of potatoes have decreased until they are now below the estimated average weekly consumptive requirements, so that supplies accumulated in distributing markets are being reduced. The total movement from the 18 leading potato states up to December 17 was about 20,000 cars ahead of the movement last year to the same date in spite of the fact that the crop is lighter this year. Maine has shipped more than twice as many cars as in the same period of 1920. A year ago growers withheld potatoes in the hope that prices would improve, but this year they have crowded them upon the market as rapidly as possible. Consuming markets are quoted wholesale at $1.75 to $2.20 per 100 pounds sacked wholesale for northern round whites. Idaho growers are receiving 80 cents for sacked Rurals and $1.10 for sacked Russets, wagonloads, cash to growers.

LATEST QUOTATIONS.

The Live Stock Market.

PORTLAND, Dec. 31.—Cattle—Choice steers, $7@7.75; medium to good steers, $6.50@7; fair to medium steers, $6@6.50; common to fair steers, $5@6; choice feeders, $5@5.50; fair to good feeders, $4.50@5; choice cows and heifers, $5.50@6; medium to good cows and heifers, $5@5.50; fair to medium cows and heifers, $4.50@5; common cows, $3.50@4.50; canners, $2.50@3.50; bulls, $3.50@4.25; choice dairy calves, $9@10; prime light calves, $8@9; medium light calves, $6@8; heavy calves, $5@6.

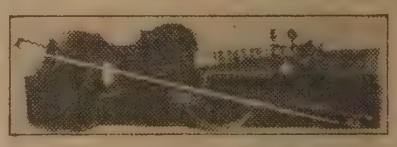
Say "Nope"! to your Grocerman

if he tries to put over on you something "just as good as"

Red Cross Ball Blue

In the words of the immortal Josh Billings—"There aint no sich thing." There is positively nothing as good as, or equal to RED CROSS BALL BLUE for producing clothes of such white purity as bring a blush to new fallen snow.

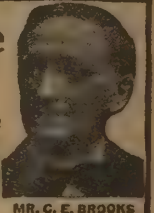
Try It 5 Cents **Prove It Everywhere**



Color Your Butter

"Dandelion Butter Color" Gives That Golden June Shade and Costs Really Nothing. Read!

Before churning add one-half teaspoonful to each gallon of cream and out of your churn comes butter of Golden June shade to bring you top prices. "Dandelion Butter Color" costs nothing because each ounce used adds ounce of weight to butter. Large bottles cost only 35 cents at drug or grocery stores. Purely vegetable, harmless, meets all state and national food laws. Used for 50 years by all large creameries. Doesn't color buttermilk. Absolutely tasteless.



Wells & Richardson Co., Burlington, Vt.

IF YOU CAN READ YOU CAN LEARN

THIS $20 VIOLIN FREE to introduce our wonderful copyrighted NOTE lessons. Unusual offer, lessons only cost. Simple as A. B. C. CERTAIN as arithmetic, one string one note at a time. Fully illustrated. Easy to play, easy to pay, learn at home. SURPRISE YOUR FRIENDS. A splendid GIFT. SUCCESS GUARANTEED. Imperial Music School, 12 E. Schubert bldg., San Francisco, Calif. State if you have violin.

Sure Rupture Comfort

MR. C. E. BROOKS

Brooks' Appliance, the modern scientific invention, the wonderful new discovery that relieves rupture, will be sent on trial. No obnoxious springs or pads.

Brooks' Rupture Appliance

Has automatic Air Cushions. Binds and draws the broken parts together as you would a broken limb. No salves. No lies. Durable, cheap. Sent on trial to prove it. Protected by U. S. patents. Catalog and measure blanks mailed free. Send name and address today.

Brooks Appliance Co. 457A State St., Marshall, Mich.

A PAIR of French Doors may be installed in a house already built. This will cut in two a large room which will not detract from the convenience of a commodious living room, at the sam time give an opportunity to save in heating. New building plans should include French Doors. Write for our catalog. We manufacture "Better Millwork"—sash, etc. Rovig, 2201 First Avenue S., Seattle

Glance over the bargains on the "Want Ad" page.

On March 22, 1922, Mildred Ellen Slye will be 9 years old. She would like to hear from her twins. This cousin writes: "There are two cows and two calves at our ranch. There are 20 pigs. They follow us all over the ranch. My sister's name is Marguerite. My brother's name is Harry." Mildred's address is Lancaster, Wash.

"I have fun at school," writes Mamie McCoy. Mamie is going to learn a poem. She is in the fourth grade and her birthday is November 7. Her home is in southeastern Spokane county, Washington.

Ruby Wigley, whose home is in Thurston county, Washington, and her sister Mabel take care of their twin brothers while father and mother do the milking. The twins are 18 months old. Their nomes are Frederick Lee and Robert Lincoln William and Charles are Ruby's other brothers. Charles is 3 years old and William is in high school. Ruby was 11 years old August 30. (Yes, Ruby, tell Mabel that Aunt Nellie will be glad to welcome another cousin to the Corner.

For pets Hannah Wells has a pony named Buck and a dog named Lassie. Hannah says it is fun to ride the pony. She was 9 years old November 9, 1921. Teacher's name is Mrs. Florence Hotes and Hannah likes school. Her home is near the Nisqually Indian reservation, in Pierce county, Washington.

Eleven-year-old Mildred Owens, whose home is near Lake Conconully, in northern Washington, says they have a crocheting and sewing club at school. Ella Meyers is the best writer in school and Mildred draws the best. She drew some pictures for Aunt Nellie. (They are very good. Thank you, Mildred.) Mildred is in the fifth grade and her birthday is in April.

THURSDAY, January 5—Ernest Gallaher, 11 year old Edith Howell, 11; Sigrid Kuja, 10; Hilda Patterson, 11.

FRIDAY, January 6—Lilly Bakum, 11 years old; Bertha Haase, 11; Olga Olansen, 11; Caro Ida Reese, 11; Montie Baker, 11.

SATURDAY, January 7—Isabell Bodin, 11 years old; Ragni Fjerlie, 11; Archie A. Watt Jr., 6.

SUNDAY, January 8—Teddy Austin, 9 years old; Shirley Baker, 10; Bernard Kunz, 11.

MONDAY, January 9—Allie Brunink, 9 years old; Fae Casey, 9; Helen Casey, 9; Pearl Gurnsey, 10; Eunice Otis, 11; Robert Pugh, 9; Laura Stahly, 9; Howard Swift, 11.

TUESDAY, January 10—Freeda Emmert; Elsie Goetz, 10 years old; Ella McHargue, 9; Francis Plotner, 10; Esther Warehime, 11.

WEDNESDAY, January 11—Margaret Erickson, 11 years old; Agnes Maurer, 11; Dorothy Isabell Goodell, 11.

In each issue a list of the cousins' birthdays for the week will be published. At the close of each letter you write be sure to tell how old you are and when your birthday comes.

LETTERS WELCOMED BY AUNT NELLIE.

Among recent letters received by Aunt Nellie are those from cousins whose names follow. A few of these will be published each week in the regular edition of THE FARMER, and others will appear from time to time in The Junior Farmer:

Ralph Bowers, Helen Kissler, Alvin Cline, Pearl Long, Bernard Boone, Theron McGraw, Walter Tuisku, Roger Stone, Marie Strahm, Ruth Otterstedt, Lester Requa, Sylvia Johnson, Leona Tuisku, Charlie Divers, Frank Blackburn, Harold Hardesty, Marguerite Johnson, Ella Ray, Anna Steiner, Ellen Murison, Ledia Salmela, Ula Easterling, Margaret V. Scoles, Emma Hochstatter, Irene Tuisku, Lewis Schreck, Hazel Hendry, George Blackburn, Martha Kissler, Bessie McDonald, Beatrice Blackburn, Margaretha Dewey, Essie May McDow, Eva Larimer.

Lottie McNeil, Marion Thompson, Edna Requa, Lucile Dixon, Hardis Greystad, Elvira Lefler, Inez Nelson, Julia Gradishnik, Myrtle Barnes, Frieda Portmann, Constance Washburn, Frances Montague, Marion Batchelder, Katherine Martinson, Walter Lenhart, Clarinda Fagan, Fanny Pakkala, Virginia Justice, Florence Wamsley, Jessie Rupp, Martha Stockton, Viola Erickson, Dorothy Provo, Ruth Hay, Marian Mulkey.

Kristine Hansen, Virginia Carviere, Tinka Oksendahl, Marguerite Wilson, Bertha Osborn, Donald Ritzsohke, Anna Pearl Steiner, Ethel Osborne, Edna Jacot, Arthur Cartwrite, Lucile Thuring, Katherine Buckley, Emma Pflug, Edith Norman, Ruth Warner, Ira Kostingader, Lucille Scoles, Linnea Forsberg, Waino Lary, Thelma Forsberg, William Anderson, Lavina Calle, Bertha Lary, Elsie Laury, Edrie Bradbury, Bennie Greenwaldt, Anna Rennick, Catherine Link, Kenneth Greenman, Hazel Schafer, Mary Cush, Thelma June Bulard, Alma Matson, Emma Rott, Mary Jane Liscum, Viola Johnson, Constance Fouts, Dannie Abel, Reuben Scheller.

HAPPY NEW YEAR TO ALL.

A Happy New Year! Juanita Porter wishes that for all. We are glad to have this letter from Juanita, which says: "Ila, my sister, also sends many happy greetings. Ila has black hair and brown eyes and is always in mischief. She will be 10 years old January 23, 1922. She goes to school and is in the third grade. She has many playmates and has a wonderful time. I have gray eyes and brown hair. I am five feet five and three-fourths inches tall, and what do you think I weigh? One hundred and twelve pounds. I am in the ninth grade and like it very much. I am inclined to be mischievous also, but I enjoy myself, anyway. I read many books and play the Hawaiian guitar, which I enjoy very much." Juanita is one of our Washington girls.

BEDTIME STORIES

By THORTON W. BURGESS.

Copyright, 1919. T. W. B.

HAPPY DAYS IN GREEN FOREST.

These were happy days in the Green Forest. At least they were happy for Lightfoot the Deer. They were the happiest days he had ever known. You see, he had won beautiful, slender, young Miss Daintyfoot, and now she was no longer Miss Daintyfoot, but Mrs. Lightfoot. Lightfoot was sure that there was no one anywhere so beautiful as she, and Mrs. Lightfoot knew that there was no one so handsome and brave as he.

Wherever Lightfoot went Mrs. Lightfoot went. He showed her all his favorite eating places. She did not tell him she was already acquainted with every one of them, that she knew the Green Forest quite as well as he did. If he had stopped to think how day after day she had managed to keep out of his sight while he hunted for her, he would have known that there was little he could show her which she did not already know. But he didn't stop to think, and proudly led her from place to place. And Mrs. Lightfoot wisely expressed delight with all she saw quite as if it were all new.

Of course, all the little people of the Green Forest hurried to pay their respects to Mrs. Lightfoot and to tell Lightfoot how glad they felt for him. And they really did feel glad. You see, they all loved Lightfoot and they knew that now he would be happier than ever and that there would be no danger of his leaving the Green Forest because of loneliness. The Green Forest would not be the same at all without Lightfoot the Deer.

Of course, all the little people of the Green Forest hurried to pay their respects to Mrs. Lightfoot.

Lightfoot told Mrs. Lightfoot all about the terrible days of the hunting season and how glad he was that she had not been in the Green Forest then. He told her how the hunters with terrible guns had given him no rest and how he had to swim the Big River to get away from the hounds.

"I know," replied Mrs. Lightfoot, softly. "I know all about it. You see, there were hunters on the Great Mountain. In fact, that is how I happened to come down to the Green Forest. They hunted me so up there that I did not dare stay, and I came down here, thinking that there might be fewer hunters here. I would not have believed that I could ever be thankful to hunters for anything, but I am; truly I am."

There was a puzzled look on Lightfoot's face. "What for?" re demanded. "I can't imagine anybody being thankful to hunters for anything."

"Oh, you stupid!" cried Mrs. Lightfoot. "Don't you see that if I hadn't been driven down from the Great Mountain I never would have found you?"

"You mean I never would have found you," retorted Lightfoot. "I guess I owe those hunters more than you do. I owe them the greatest happiness I have ever known, but I never would have thought of it myself. Isn't it queer how things which seem the very worst possible sometimes turn out to be the very best possible?"

Track's End

(Continued from page seventeen.)

kiss. The chickens had gone to roost and didn't have much to say. They refused to come down for their supper, but the horses and the cow were very glad to get theirs. Then I milked the cow, told them all good night, made everything about the barn as snug as I could, and shouldered my way through the storm to the house. I found both Kaiser and Pawsy wide awake and waiting for me. I don't think they liked the house being so deserted and lonelsome. I gave them both some of the warm milk, and took a share of it myself.

I was beginning to realize that I was tired by this time, and sat down in a big chair before the fire. The stove was a round cast iron one, shaped a good deal like a decanter. It burned soft coal, and, as it was going well, and was warm enough in the room, I threw the door open, making it seem very like a fireplace. I was over the excitement of the day, and fell to looking at the situation again. This is the way I made it out, to-wit:

First, that I was alone, except for the animals, and in charge of a whole town; that it was very improbable (as the blizzard still held) that any train would or could get through very soon—perhaps not before spring.

Second, that the animals consisted of one large, shaggy, black dog (breed uncertain) named Kaiser; one large black and white cat named Pawsy; one cow named Blossom; two bronco horses, one named Dick, the other Ned; 22 hens and one rooster, without any particular names except that I called one of the hens Crazy Jane.

Third, that there was enough hay in the barn for the horses and cow, though other feed would be short unless I could find more about town somewhere; that I ought to be able to scare up enough food for myself by going through the stores, though some kinds might be short; that there was plenty of coal.

Fourth, that there were guns of all kinds, and probably a good supply of ammunition.

Fifth, that there might be $20,000 in a safe across the street.

Sixth, that there was a gang of cutthroats somewhere about who wanted the money, and would come after it the minute they knew I was alone; and might come sooner.

By this time I was sleepy; so I covered up Kaiser on one end of the lounge, the cat on the other, put out the lamp, and went upstairs and popped into bed.

(To be continued.)

National Master's Address

(Continued from page fourteen.)

ways reported by his grange title as master.

It is to the credit of our order that so far as we can learn never but one man while holding the office of master of his state grange, has entered into an effort to establish a political party, and we sincerely hope it will never occur again. With the warning of the circumstances that have resulted, this specific lesson should not pass unheeded. Our order was founded to promote friendly relations of all religious and political ideas and to extend the great principles of American tolerance. We need to feel that above all else, here is the supreme necessity for uniting in one grand universal grange task—the ennobling of our calling and increasing the belief that "I am my brother's keeper," in that I should always strive to be worthy of his friendship by never knowingly doing him injury and by increasing his faith in me as an example of service to humanity. We must not seek to elevate ourselves by tearing others down. Such a line of action is never compatible with true grange principles. That "the tears of the compassionate are sweeter than dewdrops falling from roses upon the bosom of the earth" should be remembered by us all.

Our Task.

No outside forces disrupt an order—that always comes from within. Remembering this, may we shun danger and prove more conclusively than ever before that farmers can work together and can get results. As we turn our attention to the pressing business of this 55th annual session let us make our deliberations so frank and free, so characterized by genuine good will, that each member shall do his utmost to make this assembly render sincere service to the farmers of America in their hour of dire necessity. Let us here so harmonize our diversified interests, be so considerate of each other's problems and so united in our determination to serve the great whole, that when our work here is called into review it shall be found to meet the test. Fraternally,

SHERMAN J. LOWELL,
Master of the National Grange.

Figures on Milk Costs

(Continued from page six.)

months each, winter and summer, and the farmer's labor estimate per day for each season was accepted. Hired labor was computed at cost, while family or other unpaid labor was computed at the normal rate for such labor. The normal rate of labor for the period covered was approximately $100 per month, or 33 cents per hour, including the value of board. Horse labor chargeable to the dairy consisted of hauling the milk or cream out to the stand on the route or to the market, hauling soiling crops from the field to the barn and in any other way in which the horse directly participated in producing or marketing milk. Horse labor used in production of crops consumed by the cows was covered by the price charged against the dairy for the crops. Horse labor was computed at 20 cents per hour, including board.

The cost for the sire includes interest on a fair inventory value, depreciation, feed, labor, shelter, equipment, taxes, veterinary service and registration fees minus service fees and the value of manure produced. In this study, however, very little revenue was obtained by service fees, as most of the farmers kept their own bulls. The feed and labor charge was the farmer's estimate of the feed and labor cost of the bull as compared with a cow in his herd. If the bull occupied a stall in the building with other animals it was charged for the use of the building in proportion to the number of animal units in the barn. The depreciation charge was based on the total decrease in inventory value of all the bulls included in the study. Interest was figured at 7 per cent on the inventory value. Veterinary and other fees were charged at cost.

The charge for use of buildings is largely an approximation, due to the variation in their type and cost and to the extent to which they are used for other purposes. In this study all buildings which contributed to the operation of the dairy, including barns, silos, milkhouse and manure shed, were considered as a legitimate charge against the cost of milk production. Each building was considered a unit and the cow charges were determined by the number of animal units which were served. One horse or one cow or two head of young stock were considered an animal unit. Building costs include depreciation, interest, taxes, insurance and repairs. The depreciation was determined by dividing the present value of the building by the estimated number of years the building would last.

The charge for use of equipment includes interest, depreciation and repairs on all equipment that contributed directly to the production and preparation of milk and butterfat for market, including milk pans, pails, strainers, cooler, separator, milking machine, engine for separator or milking machine, wagon or special conveyance for hauling milk, scales, feed grinder, barn tools and veterinary instruments. Depreciation was determined by dividing the present value by the estimated number of years that each item would continue to be useful.

Current expenses included such items as veterinary fees and medicines, breeding fees, cow testing fees, board of cow tester, disinfectants, electric lights and power, feed grinding, gasoline and whitewashing.

In this study only the mature cows that had been introduced into the herd were considered. The production of young stock was considered as a separate enterprise and when a heifer freshened she was charged against the dairy at a normal value, as though purchased. Interest was charged at 7 per cent on the inventory value of all cows. The average value of all heifers as introduced into the herds was $98, while the average inventory value of all cows was $118. Taxes varied somewhat with the locality and were computed at the current rates from data and information furnished by the county assessors of the four counties.

Depreciation was determined by computing the net decrease in inventory of all cows included in the study. The decrease in inventory would include losses due to death, decrease in actual value of cows still retained, and sale of cows at beef value that were inventoried at a higher value at the beginning of the year. These losses would be partially offset by the increased value of young cows in the herd. Of the 1502 cows involved in this study 23 died and 264 were sold. A study of the tables show that Wahkiakum county had the highest depreciation, $13.23 per cow, and Pacific county the lowest, $4.40 per cow.

The marketing charge was the cash paid for delivery of milk and cream on milk routes. The common charge for this service was 10 cents per 100 pounds of milk and 1 cent per pound for butterfat. Where a car was used to deliver the milk, haul feed or in any other way served the dairy, an estimate was made as to the extent to which the car was used strictly for the dairy. This charge was based entirely upon the farmer's estimate.

The sum of all the foregoing expense items constitutes the total operating cost. The net cost of production was determined by subtracting from the total operating cost the sum of all credits other than milk, which includes the following: The manure recovered at the barn as estimated by the farmer, which was credited at $1.50 per ton at the barn; calves which were credited to the dairy at what the farmer would receive for them at 4 days of age, the price ranging from $1 to $5 apiece; all money received for hides and sacks purchased with feed, which were credited to the cows at their sale value.

Lay the foregoing article away for reference when reading the next instalment of this study of dairy farms, which will appear soon.

RAMBO & OTTO WILL HOLD SALE JANUARY 12

Through a typographical error in an advertisement appearing in the Farmer on December 29, the Duroc Jersey sale of W. H. Rambo and L. S. Otto was announced to be held at Buhl, Idaho, January 12 to 22. It should have read January 12, 1922. 35 sows and gilts, bred to Orion Joe 363705 and Orion Joe Jr. 408411, will be offered, insuring production type and quality of a standard unequalled in the past in the northwest. Catalogues of the sale are now ready.—Adv.

GUERNSEYS

not only give large quantities of rich milk of unequaled color and flavor when new milch, but they continue this production throughout the year. It is a common thing for Guernseys on official yearly test to produce more butterfat in the 12th month of lactation than in the first.

In writing advertisers, be sure to say you saw their advertisement in The Washington Farmer.

We have to plow the back forty each year. Each morning and evening we have to go out to fill the milk pail anew. Same way with our Cooperative Subscription Plan; it yielded our readers a big harvest of savings last year; but to do the same this year it must continue to have your attention and help.

We say to our readers: "Send your subscription orders direct. Get your neighbors to do the same. We will give you and your neighbor the benefit of every penny which would ordinarly go to the agent handling the subscription."

We have every confidence that you will once more put your shoulder to the wheel and repeat our request that you take thought as to your subscription renewal. Instead of waiting for a notification, mail in your order at least 60 days in advance of the address label of your paper. Tell your friends and neighbors about our cooperative plan and include their orders with your own. By all pulling together we can and will make 1922 a big year for cooperation. Let's do it!

Subscription Rates of The Washington Farmer:

$1.00 for Five Years

25 Cents for 1 Year.
50 Cents for 3 Years.
In Canada add 1 cent a copy for extra postage.

Will Sell Shorthorns

Three purebred Shorthorn sales for eastern Washington have been announced by the Pacific Northwest Shorthorn Breeders' association, under whose auspices the first of the three will be held t Spokane, February 22. This first sale will be a consignment sale, with Carl A. Greif of Uniontown, Wash., as sales manager. "The cattle going through the sale this year will be of high-class order, as they will all be passed on by a culling committee, with only cattle of merit being accepted," says A. E. Lawson, field representative of the American Shorthorn Breeders' association. About 30 bulls and 30 cows and heifers will be offered in this sale.

On the following day, February 23, Day & Rothrock will sell about 40 head at Hercules farm, near Sprague. Nearly all of these cattle have been bred and raised on Hercules farms, according to Jack Napier, farm superintendent.

The third day, February 24, A. D. Dunn will hold a draft sale of his herd on his ranch near Wapato, in the Yakima valley. He will sell about 40 head.

LIVE STOCK SHOW AT SALT LAKE.

Preliminary arrangements for the fifth annual Intermountain Live Stock show, to be given in Salt Lake City April 3-6, are well under way. Dr. R. M. Mead, the director, reports assurances that at least 68 carloads of purebred cattle, sheep and swine will be sent in from all states of the intermountain and Pacific group, and that in addition to this there will be numerous dairy products and educational displays.

Special prizes are to be awarded as an inducement to increase the educational features of the show. Calves, lambs and pigs raised by the boys and girls' clubs of the different states are to be given special attention this year.

LEARN FOR NEXT YEAR.

The shortage of various kinds of feed this winter may well indicate what kinds, and in what quantities, should be grown next season for a year from now.

We Buy and Sell

Belgium Imported Melotte

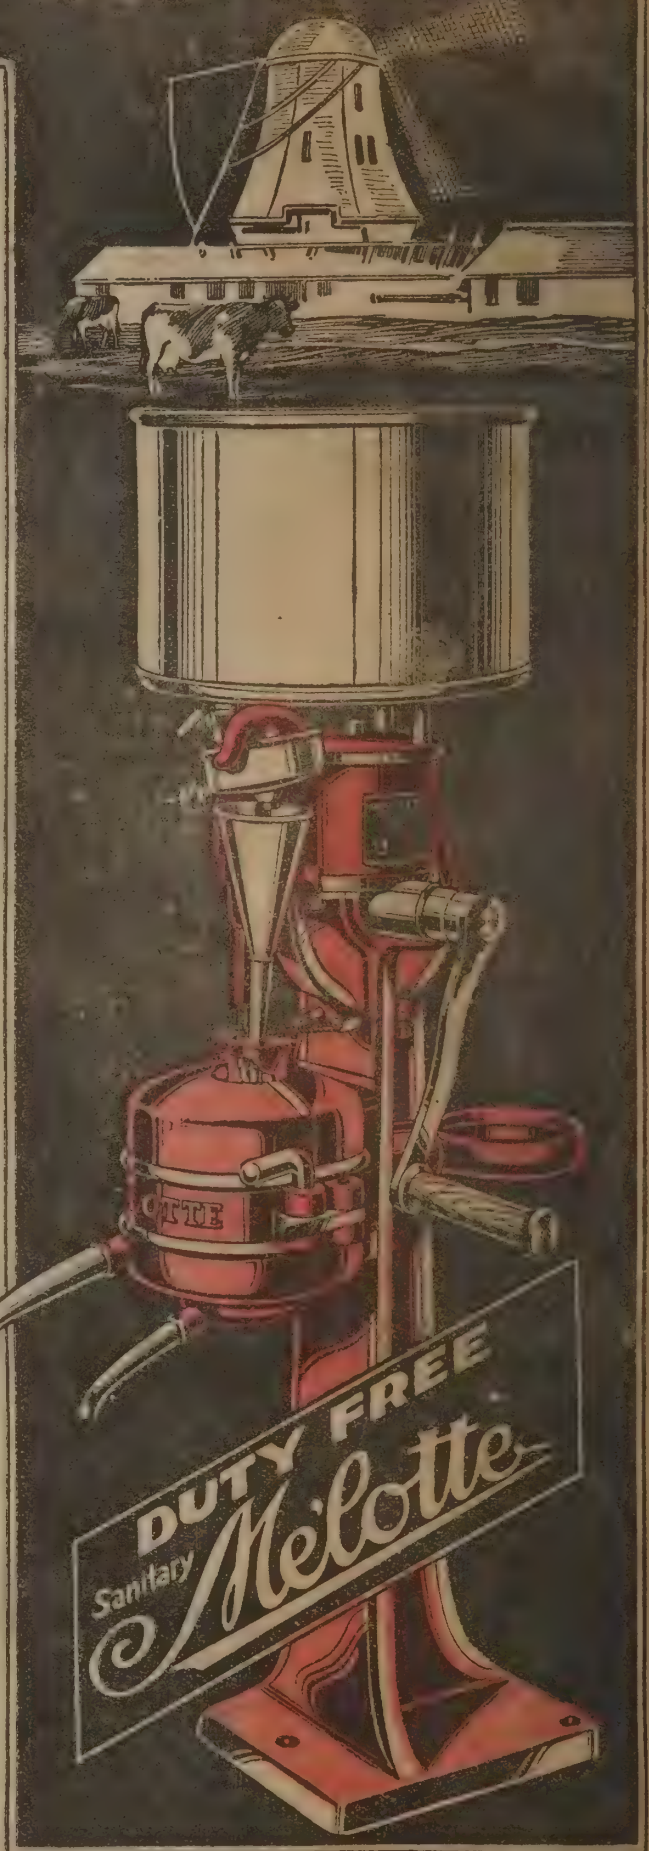
22% Cut In Price

MELOTTE, the Edison of Europe, manufacturer of the greatest Cream Separator the world has ever known, announces a sweeping reduction in prices. Labor conditions in general together with tremendous re-building and re-organizing efforts put forth by this big man of Belgium has resulted in cutting production costs to the bone.

And right now *at this particular time* exchange rates are extremely favorable. Take advantage of this condition while it lasts. Get the most for your American dollar. Buy now and save money.

Before buying any separator find out how the Melotte has won 264 Grand and International Prizes and how, for efficiency of skimming, ease of turning, convenience of operation and durability—the Great Belgium Melotte has won every important European contest. Find out why 500,000 Melotte Separators are in continuous use today.

Our 15 Year Guarantee



Every Belgium imported Melotte Cream Separator is sold under an absolute, ironbound, 15-year guarantee. No Melotte is ever sold except under this guarantee. A guarantee written in plain English so that you can understand it. A guarantee that is 100% stronger than any other separator guarantee ever made. A guarantee that really guarantees something—upon which you can absolutely rely—an absolute protection to the purchaser, and which binds us to our bargain.

What U. S. Government Says:

Vibration of a cream separator's bowl will soon cost you more money in cream waste than the price of your separator. U. S. Government Bulletin No. 201 says that a perfectly true motion of the bowl is *absolutely necessary*. the bowl is the vital part of any separator—the part where the cream separation takes place.

Self-Balancing Bowl

The Belgium Melotte is the only self-balancing-bowl separator made. This patented bowl hangs from one frictionless ball bearing and spins like a top. It is *self-balancing*. It skims as perfectly after 15 years' use as when new. Positively can not ever get out of balance—can not vibrate and thus cause cross currents which waste cream by remixing with the milk. The 600 lb. Melotte turns as easily as the 300 lb. machine of other makes. Spins for 25 minutes unless brake is applied. No other separator has or needs a brake. The Melotte bowl has solved the problem of perfect skimming.

$7.50 after 30 Days Free Trial

—NO MONEY DOWN—FREE TRIAL—SMALL MONTHLY PAYMENTS—DUTY FREE

We will send an Imported Melotte Cream Separator direct to your farm on a 30 days' absolutely Free Trial—no deposits—no papers to sign—use it as if it were your own separator. Satisfy yourself that the porcelain bowl is as easy to clean as a china plate. Compare it—test it in every way.

When you are convinced the Melotte skims cleaner, turns easier, washes quicker, has one-half less tinware to clean, lasts longer than all others, then pay $7.50 as first payment and the balance in small monthly payments until the separator is paid for.

Send No Money!—Easy Payments!

After 30 days free trial, then send only the small sum of $7.50 and the balance in small monthly payments. The Melotte pays for itself from your increased cream checks.

You're not to send one cent until you've used this great Belgium Melotte and have made up your mind it is the machine you want. Keep it for 30 days and use it just as if it were your own machine.

Compare the Melotte separator with any other—test them side by side. Then send your milk to the creamery. Let *them* prove which separator skims the cleanest.

The Melotte Separator, *H. B. Babson, U.S. Mgr.*
Dept. 3231 **2843 West 19th Street, Chicago, Illinois**
2445 Prince St., Berkeley, California.

Without cost to me or obligation in any way, please send me the Melotte catalog which tells the full story of this wonderful separator and M. Jules Melotte, its inventor. Also send me your revised price list showing 22% reductions.

SPOKANE. SEATTLE.

Farmer's Purchasing Power Drops

Prosperity of General Industry Is Indissolubly Bound Up in Prosperity of Agriculture

Statements issued by the United States department of agriculture at the close of the year estimated the value of important farm crops at $5,675,877,000. This is based on prices at the farm on December 1. The total is almost $3,400,000,000 less than last year's crops were worth, and $8,000,000,000 less than the crops of 1919.

That means that the purchasing power of the American farmers is $8,000,000,000 less than it was two years ago and nearly $4,000,000,000 less than it was last year.

In two years, according to this estimate, the value of the corn crop fell from $3,768,516,000 to $1,305,625,000. Yet the 1921 corn crop was nearly 500,000,000 bushels greater than the crop of 1919.

The department's figures further show that while the wheat crop of two years ago was worth $2,080,686,000 on the basis of farm prices on December 1, the 1921 wheat crop was worth only $737,068,000.

In the same way, the value of the oat crop slumped from $833,922,000 two years ago to $31,540,000 this year.

When the Farmer Can't Buy.

In a recent talk before the Portland Chamber of Commerce, Robert E. Smith, president of the Lumbermen's Trust bank, declared after a two-months' tour of the United States for the study of general conditions that "**the commerce and industry of the country can not proceed at a normal basis until the purchasing power of the farmer has been rehabilitated.**"

Mr. Smith's conclusions are in close accord with those repeatedly advanced by THE FARMER. He pointed out that at the present time agricultural products are normal in price and amount, while manufactured products are 60 per cent higher in price and are only at 70 per cent of normal production. He quoted government statistic to show that this wide spread between the prices of agricultural products and manufactured products is unnatural and can not be long maintained. His figures are interesting and we give them herewith:

	Value of Manufactured Products.	Value of Agricultural Products.
1899	$ 4,831,000,000	$ 4,717,000,000
1904	6,293,000,000	6,122,000,000
1909	8,529,000,000	8,558,000,000
1914	9,878,000,000	9,895,000,000
1919	25,500,000,000	24,982,000,000

These figures show that for more than 20 years, from 1899 to 1919 inclusive, there was constantly a pretty close balance between the total value of manufactured products and the total value of agricultural products.

Mr. Smith said that the farmer, directly and indirectly, buys 60 per cent of the manufactured products of the nation, an estimate that probably is approximately accurate.

At all events, the farmer is a controlling buyer of manufactured products, and his impaired ability to buy such manufactured goods at this time accounts for the widespread and persistent unemployment throughout the United States.

A Great Difference.

Many people wonder why the prices of manufactured commodities do not come down more rapidly to the low level of agricultural products. The chief reason is the difference of conditions in the two lines of industry. The farmer has one turnover a year and must go on producing crops. The manufacturer has several turnovers a year, and when markets fall off he closes down his plant or greatly reduces his payroll. In that way he contrives to keep down the readjustment of prices over an extended period, while the farmer has to take his price readjustment at one fell blow. To make the avalanche of farm prices still more terrific, the banks of the United States, very largely under the whip and spur of the federal reserve board, suddenly withdrew the support of credit from the agricultural industry.

P. S. Goodman, in a leading article in the Price Current Grain Reporter, of Chicago, for December 28, censures the country's banking system for at least a large part of the distress that has been thrust upon the farmers of the country. He says:

"The banks have exacted too high a rate of interest, not justified by the necessity. High rates to force liquidation of the weak concerns ought not to have been applied to solvent and careful borrowers. **The average profits of our banks as a whole last year were nearly 25 per cent on their capital; the average dividends half that amount.** The leader in the debt recession was the reserve banks, which maintained exorbitant rates—practically usury; they earned a hundred per cent on their capital. The dividend rate was fixed at 6 per cent for the very purpose of avoiding high rates. The great reserve institution conceived for the public benefit is running perilously near to the fate that overtook the United States bank 90 years ago. The good that it does may be neutralized, in public opinion, by the avarice and insensibility of its directors."

Should Investigate This.

That accusation, made so often and believed by so many people, should have the most searching investigation at the forthcoming conference on agricultural problems, which President Harding has directed Secretary Wallace to call. We expect that when the conference opens and the searchlight is turned on the proceedings of the past year, the country will see a lot of squirming and almost frantic effort to shift the responsibility from one shoulder to another.

Are You Reading the Story of Jud Pitcher at Track's End?—Page 14

There's nothing better

Three standard coals—Black Diamond, Newcastle and South Prairie—combine to make Diamond Briquets. We could mix these in the bunkers and sell the mixture by the ton—but you would get NO unified, blended, balanced fuel. Only by combining the three in each lump can you get the best of each.

The Black Diamond makes them extra hot; Newcastle makes them burn slowly, and South Prairie makes them coke, burn regularly and hold their structure.

No coking coal should be poked. It breaks the lump down so it ceases to coke. Diamond Briquets coke if you leave them alone. So to have them coke, don't give 'em a poke.

Diamond Briquets are NOT poured into molds—a huge machine exerts 2000 pounds pressure on each briquet, making it as dense and solid as lump coal. NOT the little 7% binder—but THIS TREMENDOUS PRESSURE makes the three coals stay together as one unit.

For practically every household fire, in the kitchen range, heater, fireplace and furnace use Diamond Briquets. They are uniform in size, easy to handle—and they release more heat than you ever thought could be packed into a chunk of coal.

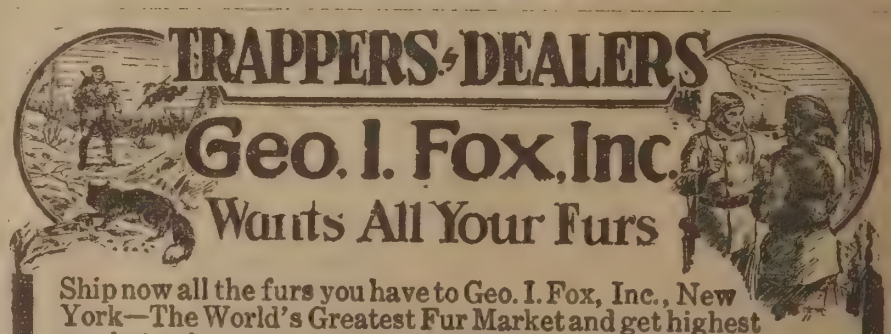
PACIFIC COAST COAL COMPANY

Black Diamond Coal
Newcastle Coal
Issaquah Coal
South Prairie Coal
Franklin Coal
Diamond Briquets

If you live east of Yakima there seldom is any advantage in insisting on Pacific Coast Coal Company coals. West of Yakima there invariably is an advantage. If you live west of Yakima and can not readily obtain these coals from your dealer, address the Sales Department of the Pacific Coast Coal company, Seattle, and we will arrange to have you supplied.

Ship furs to FOUKE

—if you have not yet shipped to Fouke



Split your next shipment, skin for skin, grade for grade, send one half to the house you've been shipping to, and the other half to Fouke at once. You will get more money for the half you ship to Fouke, you can bet your bottom dollar on that.

(We believe that we are paying fur shippers 20% to 25% more for furs than any other house in the country. We want you for a regular shipper.)

FOUKE FUR CO.

395 FOUKE BUILDING

ST. LOUIS, MO.

TRAPPERS-DEALERS

Geo. I. Fox, Inc. Wants All Your Furs

Ship now all the furs you have to Geo. I. Fox, Inc., New York—The World's Greatest Fur Market and get highest market prices, spot cash, the same day shipment is received.

We want all the Skunk, Muskrat, Raccoon, Mink, Fox, etc. We need all you can ship. Do not wait a single day—*ship now while prices are high.* Our years of experience assures you honest and intelligent grading—our reputation assures you a square deal. You will like Fox's square dealing and quick service. We will hold shipment separate on your request.

Fur Buyers and Dealers

We cater to fur buyers and dealers. Ship us all your furs—send us your own grading. We will match our grading against yours and pay you top prices. *If desired we will wire you our bid as soon as shipment is received. No delay, no misunderstanding. We will hold your shipment separate until we hear from you if our bid is satisfactory.* If you are not a regular shipper to Geo. I. Fox, Inc. you cannot fully appreciate the unusual service we give fur shippers, buyers, and dealers. The market conditions now make it necessary that you ship your furs often. Send us your shipment today and you will be a Geo. I. Fox shipper for years to come.

GEO. I. FOX, INC.

164 W. 25th Street, Dept. 115 New York, N. Y.

TRAPPERS

We must have 10,000 mink, 20,000 coyotes and 25,000 muskrats, and will pay big prices for these articles, and for all other RAW FURS. Give us a trial and be convinced. Write today for our new price list and shipping tags.

917 Wazee Street, Dept. E. Denver, Colorado.

THE WASHINGTON FARMER

SUCCESSOR TO

Vol. 46. No. 2 THE RANCH PACIFIC DAIRYMAN HORN AND HOOF January 12, 1922

For Good Farming, Attractive Country Homes and Happy Country People

Go Gunning for Scrub Sires

Concerted Effort Starts January 24 to Eliminate Mortgage Makers

Tuesday, January 24, 1922, will go down in the live stock history of the state of Washington as a red letter day if the plans for a scrub sire drive are carried out as they are now being drawn up.

On that date there will be held in every county in the state—at least in every one that has a county agent—a countywide meeting of farmers, live stock men and breeders for the purpose of laying definite plans for the survey of the county as a preliminary step to the "roundup." At that meeting in each county community leaders will probably be selected to hold similar meetings in each community of the entire county. At each community meeting definite and detailed facts will be secured as to the live stock in that community. Such facts will be secured as these:

How many scrub sires there are in the community and who owns them; how many females there are in the community and how many and what kind of purebred sires could be used to best advantage; what particular breeds are most popular in the community and what are most suitable for standardization of the live stock industry of the community; what the opportunities are for the establishment of purebred sire clubs, with several farmers going in together in the cooperative ownership; how many farmers and stockmen would be glad to exchange scrub sires for purebreds, and what financial aid they would need in bringing about such exchange.

This movement got its official start in a little room on the seventh floor of one of Spokane's hotels last week, when Director S. B. Nelson of the state college extension department and C. M. Hubbard, live stock extension specialist of the college, met with about a score of farmers and stockmen to consider the proposition. Similar meetings are being held in other central localities throughout the state prior to the main county meetings January 24.

The warfare is to be carried on against all kinds of scrub stock—beef cattle, dairy cattle, sheep, hogs and horses.

The problem of financing the farmer who desires to get rid of his scrub and obtain a purebred, or who, having no sire at all, desires to build up his herd or flock by use of one, is recognized as one of the big issues. A part of the present anti-scrub drive, therefore, will be the working out of a systematic plan of finance. A campaign to convince the local banker in every community of the value of the purebred sires to the farmers of such community may be put on as a part of this phase of the movement. Breeders themselves in many instances may work out methods of personally financing the proposed exchange. Some method of accepting the scrub sire as part payment for the purebred may be formulated. This and other details of the movement will be worked out as the campaign progresses.

Announcement of the places of meeting for January 24 will be made from the county agents' offices and from the state college extension division. As wide publicity as possible is to be given in order to secure the maximum amount of interest in the campaign to rush it to a successful conclusion in time for the various breeding seasons of 1922.

"Better Sires--Better Stock"

By W. L. DAVIS.

The scrub sire's death warrant has been signed by 159 farmers in Kittitas county as a result of a campaign finished December 31 by the live stock project committee of the county farm bureau and the state college extension service for enrollments in the "better sires—better stock" crusade. The campaign is resulting in heading numbers of scrub and grade sires toward the shambles, in the purchase of good purebreds to replace them and in a movement for the organization of sire clubs and associations for the small farmer who is not able to own a good purebred sire individually.

In a contest between community farm bureaus conducted in connection with the campaign, Thorp farm bureau won first and the $50 cash prize by enrolling 65 per cent of its farmers in the crusade. Edgemont-Thrall was second, with 58 per cent; Denmark, third, with 48 per cent; Broadview, fourth, with 32 per cent; Woldale, fifth, with 20 per cent; Peoh Point, sixth, with 19 per cent; Fairview, seventh, with 8 1-3 per cent; Cove-Damman, eighth, with 8 per cent, and Swauk-Teanaway, ninth, with 3 per cent.

Each farmer who enrolled in the crusade signed the following pledge:

"I have listed in the foregoing statement the number of cattle, horses, asses, sheep, swine, goats and poultry kept for breeding and in the future will keep and use only purebred sires of good quality in those classes of live stock. I will follow to the best of my ability breeding methods leading to live stock improvement."

The live stock project committee has already secured $65 in cash prizes and a $15 silk banner to be awarded January 1, 1923. The community enrolling the greatest percentage of its stock owners in the "better sires—better stock" crusade will receive $40 and the silk banner and the community enrolling the second highest percentage will receive $25.

The members of the live stock project committee who desirve most of the credit for the success of this campaign are as follows: L. J. Richards, county chairman; F. P. Newman, Thorp; Cooper Mills, Broadview; P. H. Adams, Fairview; Jake Frederick, Cove-Damman; S. L. Woodhouse, Edgemont-Thrall; E. W. Wilson, Denmark; H. Warner Roseburg, Peoh Point; P. A. Dunford, Swauk-Teanaway; Fred Wippel, Woldale.

Hold Poultry Show in Seattle

All Common Breeds Vie for Top Honors With Each Other

One thousand or more poultry aristocrats graced the Washington State Poultry association's midwinter poultry show at Seattle last week. There were also a large number of rabbits and pigeons. The association now has the support of breeders from all the important poultry districts of Washington, and the show is being staged on a larger basis, including entries from British Columbia, New Jersey and many states of the northwest.

William Coats, who has judged poultry since the beginning of the industry in the northwest, helped judge the classes and was heard to express his opinion of the show to one of the officials as follows: "You have one of the biggest collections and some of the classiest stock that I have ever seen at any show on the Pacific coast."

R. C. Simpson, secretary of the show, who, by the way, is responsible for a large part of its success, was enthusiastic as to the outcome of the event.

"We are determined to make it the poultry show of the northwest," said Mr. Simpson. "We are not caring so much where it is to be held, but it will undoubtedly be in some town on Puget sound. Perhaps Seattle will be its permanent home. There has long been a need for a show in midwinter because the birds are in the best of shape and there is a lull in the show business at this time of year. The poultrymen have more time to spend with their show birds and there is a better chance for visitors to turn out than if the show was to be held either earlier or later in the season.

Opening of Season.

"Another advantage of holding the show early in the winter is to make it the beginning of a series of shows throughout the northwest. We are going to select some of the representative birds and send them to the other shows at Waterville, Wenatchee and Spokane, and some of them will go to shows as far as Helena, Mont. Plans are being laid to make the Seattle show one of the northwest midwinter poultry show circuit."

"The show is really better than we had ever hoped to have for the first year," said A. Hollings, president of the Washing Poultry association. "It is our purpose to please the utility men as well as the fanciers and for that reason we arranged for an egg-laying contest to be held during the show. It gives an opportunity for rivalry between breeders and is an interesting part of the show. Next year we will enlarge the contest."

As to numbers, the Buff Orpingtons and the Light Brahmas were best represented, while the quality of the Rhode Island Reds, the Barred Plymouth Rocks, White Wyandottes, White Leghorns and Black Minorcas was equally outstanding. All the birds were arranged in double rows in modern wire coops, which were set in the center of the room.

The judges were William H. Coats and Harry H. Collier, both of whom are well known to poultrymen of the northwest and have judged at poultry shows for several years past. Ralph B. Randall of Seattle also helped with the judging.

After the judging was completed the exhibitors were allowed to display their show cards or banners which told to whom the birds belonged and showed which individuals won prizes. A number of feed companies displayed their products along one entire side of the large show room. On the opposite side several incubator companies had their machines in operation with chicks hatching daily and chirping merrily from under their warm brooders.

One booth was covered with evergreens and on one side there was a card which invited the visitor to peep within at a miniature peace conference—a pen of white fan tail pigeons.

The Rabbit Show.

Although a part of the main show, the rabbits were entered as a separate unit and judged by R. J. Needham of Seattle. The entries came largely from members of the Washington state branch of the rabbit breeders and fanciers' association, of which branch H. W. Powell of Seattle is president. The show was put into shape by E. J. Etherton of Seattle as manager and J. W. Petitt of Everett as secretary.

"The breed represented by the largest numbers was the New Zealand Red," said Mr. Etherton, "and they represent some of the finest stock in the northwest. The Flemish Giants had a fine turnout, all of which were excellent animals. Some of them came from as far as Vancouver and Victoria, B. C. The classes were all well filled and there were many in the other breeds, such as the Siberian Blacks, the Rufus Reds and others. There are over 200 entries in all.

"The rabbit breeders are just as determined as are the poultrymen to make this show a real one and we are all working with them for a bigger show next year. We can easily get 600 or 700 rabbits next year if we have enough room and sufficient time to advertise the show."

There was a fine display of pigeons, which included both the utility breeds and the fancy type. Dr. F. S. Bourns of Seattle entered four utility breeds, including the following: White King, Red Carneaux, Black Hungarian and the Maltese. The fancy breeds were shown by Dr. L. S. Norbom of Seattle and his son, R. H. Norbom, the latter having brought several pairs of long distance carriers from France, where he was a member of the A. E. F. during the World war. Some of these birds were captured from the German army. Mr. Norbom Sr. has been raising pigeons for the last 10 years and the whole exhibit included 12 different breeds.

The Washington Cooperative Egg and Poultry association arranged a booth where they demonstrated the value of grading eggs for the market. A show card explained the different grades with the following footnote: "The housewife should know the different grades and demand that they conform to the proper weights. Standard eggs should weigh 24 ounces to the dozen, pullet eggs an average of 20 ounces, while peewees are a small egg, weighing less than 19 ounces to the dozen. When buying eggs you should see that these grades are not mixed and sold as standards."

Complete awards will be given in an early issue.

The Prize Pig Contest

THE FARMER'S letter contest on the subject of hogs as a byproduct of the state has served the purpose for which it was originated—the arousing of interest in the possibility of profit from a few hogs on nearly every farm. Scores of letters were received, and the judging is now being done preparatory to awarding the prizes as early as possible. Watch next week's issue of THE FARMER for something interesting on the contest. The three prizes offered were: First, a purebred gilt, bred to farrow the coming spring; second, $15 in cash; third, $10 in cash. The contest is now closed, and, while letters discussing the subject of hogs on the farm will gladly be received, they can not be considered in awarding the prizes.

Wool Growers

State Association at Yakima

The 20th annual convention of The Washington Wool Growers' association will be held in Yakima January 13 and 14, when, in addition to the transaction of association business, the wool growers will file applications for grazing permits with the forest supervisors who will attend. This alone is an important matter, for it is understood that no action will be taken regarding applications except at this meeting.

One of the outstanding features of the convention will be the formation of a wool growers' finance corporation for the purpose of taking advantage of government funds now available to live stock growers and for handling wool clips of members.

"There is no reason why the wool clip of our state should not be handled on a business basis," says J. F. Sears of Prosser, secretary-treasurer of the association. "By our present haphazard methods sheepmen are losing $50,000 to $100,000 per year, and this loss must be stopped."

Mr. Sears urges every member to be in Yakima in time for the morning session on Friday, as the two-day program is full of subjects of vital interest.

"Open House" at Poultry Plant

The department of poultry husbandry of the Washington State college, in cooperation with the student poultry association, will hold an "open house" day at the new poultry plant, January 14.

There will be student work and an exhibit of the birds fitted by students; an egg exhibit with commercial candling featured, a dressed poultry exhibit, feed exhibit and a dry picking demonstration. Guides will be available through the day for all visitors.

The following buildings have been erected: An incubator house, 38x60, with incubator rooms in the basement and one full floor above.

An experimental breeding house, 16x180 feet (18 separate pens), with work room on the end 16x20 feet. A student practice brooder house, 100 feet, with a center work room, 20x20 feet. A feed house, 30x40, with root storage, oat sprouter and killing room in the basement and two floors above for feed mixing, grinding and storage. Two unit brooder house, each 12x24 and a unit laying house, 24x30.

Is Milk Contract Binding?

The hearing for a permanent injunction against a Lewis county dairyman to compel him to deliver his milk to the Lewis-Pacific County Dairymen's association, under his cooperative contract with that association, comes up Thursday of this week. A temporary injunction was previously issued. The case is an important one not only to dairymen, but to others interested in cooperation, because of the principle of cooperation involved.

RECOMMENDS RED CLOVER.

"Sweet clover is not recommended for western Washington conditions because it is a hard crop to seed and then the red clover is much superior for hay or pasture," is the advise of M. E. McCollam, agronomist of the western Washington experiment station. "Red clover has more leaf surface than any sweet clover and the stock like it better. It seems to be better adapted to our climatic conditions and is easier to seed. Sweet clover is more of a hot weather plant and does not do so well in our cooler climate as it does in some of the irrigated districts east of the Cascade mountains."

WOMEN FARMERS IN WASHINGTON.

According to a 1920 census report, there were 1879 women farmers and 607 women farm laborers in the state.

OUR GUARANTEE TO SUBSCRIBERS.

Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unused portion of the amount paid for the subscription will be refunded. You must be satisfied.

Entered as second-class matter, January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879.

GUARANTEE OF ADVERTISEMENTS.

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Complaints must be sent us within 30 days from the date of the transaction and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of disease in stock sold through these columns.

Its Merits Are Sufficient

In addressing a community meeting of farm folks in Washington some time ago, Chester Gray, representing the American farm bureau federation, said:

"Our solicitors are trained and instructed not to oversell, mis-sell or undersell the farm bureau idea."

In other words, the farm bureau is willing to stand on its own merits exactly as they are, without any overenthusiastic promotion. Those who are organizing it believe in it to the extent of being willing to present the truth, the whole truth and nothing but the truth, to the farmers of the country.

Farmers, in common with most other classes of people, have been buncoed by so many Utopian pictures of institutions and organizations that are reputed to solve all their problems for them that they are naturally skeptical of the new things that come along. It is refreshing and encouraging to see the organization movement of the farm bureau, which is a movement of the farmers themselves, taking the wholesome attitude expressed so strongly by Mr. Gray.

Rundown or "Sick" Pasture

When a pasture becomes run down or "sick" it is usually because the desirable grasses have either been crowded out by less desirable grasses or weeds. After this process once begins it continues very rapidly and soon renders a pasture almost worthless as far as feed is concerned.

In extreme cases of this kind it will probably be best to break up the sod and seed over again, which, of course, is a costly process. There are some cases where it is felt that no great expenditure can be made on grass lands and some cheaper method is sought.

Reseeding can often be accomplished very economically and the best grasses allowed to grow while the weeds are checked, according to M. E. McCollam, agronomist of the Western Washington Experiment station. It is assured that the pasture is in fairly good condition and that it contains an appreciable percentage of good grasses and clover. If this is not the case, the pasture being mostly "mesquite" and other weeds, it will be best to plow it up and reseed to a good pasture mixture. However, starting with a pasture in reasonably fair condition, it can be stimulated and maintained very cheaply by a light seeding each year with the most desirable grasses, and by following this with a vigorous harrowing. This may be done early in October, when the stock should be off the pasture, or in February, several months before the stock are put on the pasture.

The amount of seed used for this yearly reseeding need not exceed six pound per acre. The pasture should not have too much aftermath and it may have to be mowed over before sowing the seed. Four pounds of grass to two pounds of clover may be used, or if the clover is badly run out the six pounds of seed may be composed of half clover. Highly desirable grasses to use under general conditions are Italian rye grass, meadow, fescue and tall oat grass. Most of these grasses are inclined to die out easily and should be reseeded frequently in order to keep the pasture in the best condition. Ketucky blue grass is one of our best grasses for western Washington, but the seed should be examined to ascertain if it is adulterated with Canadian blue grass, which is much inferior in quality.

White clover will hold out longer than any of the other clovers and should be mixed in with the seed in order ot produce a different time for growing so there will be more continuous forage during the growing season. Common red clover or alsike clover should be mixed with any grasses such as named above. For wet lands red top and alsike clover are especially adapted.

War Debts Must Be Paid.

About one-third of the gigantic sums that the United States government raised during the war through heavy taxes and sales of Liberty bonds was loaned to the European allies. These loans totaled more than $10,000,000,000. No part of them has been paid and no part of the interest that is due, so the obligations now amounts to more than $11,000,000,000. When President Wilson was in Paris Premier Lloyd George and the French statesmen asked him what he thought about a plan of canceling all of these debts. Mr. Wilson made no commitment, but on returning to the United States sounded out public opinion and found it decidedly hostile to any such lavish generosity.

Great Britain could afford to cancel the war debts, because what it loaned to France, Italy, Belgium and other countries it more than got back in what it barrowed from us. But a general plan of the remission of these debts would leave Uncle Sam holding the sack to the tune of more than $11,000,000,000.

It was long thought that the plan had been dismissed from serious consideration, but with the holding of the international conference at Washington the question has been raised again and again and is receiving considerable discussion in the eastern press. The proposal has not been brought up openly at the international conference, but well-informed Washington correspondents say it is a repressed issue.

Some surprisingly weak arguments are being put forward in support of the suggestion. For instance, Professor Edwin R. A. Seligman of Columbia university, in an address before the American Economic association, made the ridiculous assertion that unless we cancel these debts we will "put ourselves on the level of the Hessian rulers who supplied Great Britain with mercenaries during our Revolution."

The truth is that the allies were all but defeated when the United States sprang to their assistance. We took more than 4,000,000 of our young men out of industry and business and put them into training camps. We spent directly about $25,000,000,000 and then loaned the allies $10,000,000,000 more. That $10,000,000,000 came from the pocketbooks of the American people, and no group of men in congress or anywhere else would have a moral right to give away $11,000,000,000 of the hard-earned savings of the American people.

We can afford to be easy in the collection of that debt, but Europe should be made to understand definitely and emphatically that we expect the repayment of every obligation.

Farm and Forest

It is declared that the farmers use a third of all the lumber turned out in the mills of this country. If for no other reason than this, the farmers should be vitally interested in the conservation of the nation's timber resources.

State Farm News

Wire worms have been a source of great loss to the potato growers on the reservation this year and they are casting about for some means of control, says a Yakima report. A method whereby the worms are electrocuted has been worked out, but this means of killing them is under suspicion, since it is not known but what the soil bacteria are killed at the same time and possibly other undesirable effects upon the soil might result.

Another means which consists of the use of a chemical drilled into the ground which, it is claimed, kills the worms but leaves the plants and soil unaffected, is considered by Reuben Benz of Toppenish as being a safer method to use. He is planning to apply the chemical on some potato ground the coming season. He will drill it into the ground very shallow or half an inch or an inch deep. It is claimed that this kills the worms and the chemical used is not injurious to plant growth.

* * *

A yield of 130 bushels of certified oats to the acre is the record of Louis Larson of Brady this year. The certification of the oats was made by C. M. McCody of Montesano, who purchased them. In addition to one six-acre field Mr. Larson had several smaller fields, all planted to "Victory" oats.

* * *

The King County Fair association, with headquarters at Tolt, has filed articles of incorporation and received a license from the state. The board of trustees met in Snoqualmie recently and elected the following officers: Otto Rening, president, Snoqualmie; Jessie Simmons, secretary, Tolt; Otto Wide, vice president, Preston; Ernest R. Meir Jr. treasurer, Bothell. A site of 40 acres will be purchased and it will have a half mile race track.

* * *

Cowlitz county berry growers have completed their organization with the selection of the following local directors to work under the county director, S. M. Vogel, and county officers: Kelso, M. V. Edmonds; Castle Rock, G. E. McCoy; Ostrander, I. C. Chuinard; Kalama, E. H. Stewart; Woodland, J. W. Cheevers.

* * *

A polished granite cornerstone has been presented to the Toppenish school board by Architect George Gove of Tacoma for use in the new high school building now under construction. The stone is about 22x36 inches. It contains a brass box, in which records and photographs are to be sealed. The inscription, "For they can conquer who believe they can," from Dryden, is to be engraved upon the face of the stone.

* * *

Figures to prove that 50 apple trees per acre will produce more fruit than 85 to 100 trees per acre will be available in a year or two if the expectations of Professor O. M. Morris of the Washington State college are realized. He is convinced that there is much overcrowding of trees in orchards resulting in small size and low yields. He contends that profits depend upon the size of the fruit produced. Last year in the returns of one of the large associations extra fancy Winesaps of 125 size and larger brought $2.15 per box; sizes 138 and 163 brought $1.85 per box and sizes 175 and smaller brought $1.20 per box.

* * *

Clark county leads the state of Washington in the production of certified seed potatoes, having grown 8180 bushels, mostly Burbanks, to Spokane county's 7360 bushels this year. The crop is absorbed in supplying the seed market of Yakima and California, and a large proportion of it is handled by the potato department of the Washington Growers' Packing corporation.

* * *

The growth of the poultry industry in Lewis county is shown in a report issued by A. G. Fowler, county agent, in which the total farm production of the county was estimated at $4,630,302. Of this sum, poultry and poultry products represented $1,286,000. Other items in the report are listed as follows: Dairy industry, $1,298,600; other live stock, $90,802; cereals, $1,575,600; root crops, $206,000; fruits, $159,300, and honey, $14,000.

* * *

Irrigation of 15,000 acres of fertile land around Pateros and Brewster by construction of a dam across the Methow river, a ditch that will take the whole flow of the river, and turbines that will pump water 315 feet to Tupper and Brewster flats, is a plan being considered by the directors of the Pateros-Brewster reclamation district.

* * *

Only 20 per cent of the school children of McCleary are five pounds or more underweight now, as compared with 50 per cent in that condition last spring. This improvement was revealed when the county nurse recently made a careful survey of the school. Much credit for the improved condition is given to Mrs. B. E. Fleming and Mrs. E. C. Teagle, who have helped in the organization of nutrition classes. Milk and hot lunches have been a big factor in bringing about the results.

* * *

The Puyallup valley realized a net return of $4,000,000 from fresh fruits and canned products for the year 1921, according to figures compiled at one of the local banks. The sum includes 2545 tons of fresh fruit which went to eastern points, while 636 tons were sold to local markets.

* * *

Whatcom county eggs have found their way into a new market, Montreal, Canada. One carload was shipped to that city recently and other shipments there are expected to follow. Egg shipments from Bellingham have increased to three cars weekly. New York has long been a regular customer and recently Detroit began ordering car lots. California also is an occasional buyer and some business is done in British Columbia.

Coming Events of Interest

Jan. 13-14—Wash. Wool Growers' Ass'n meet, Yakima.
Jan. 17—Ore. Dairymen's league meeting, Portland, Ore.
Jan. 20—Charles G. Sprong Holstein sale, Grandview.
Jan. 23-28—Poultry show, Spokane.
Jan. 26-27—Grain grow'rs, ship'rs, mill'rs' meet, Spokane.
Jan. 30-Feb. 3—West. extension conference, Portland, Or.
Feb. 2-3—North Pacific Fair association meet, Spokane.
Feb. 6-7—Davis and Butchart Bros. Holstein sale, Granger.

Feb. 23—Day & Rothrock Shorthorn sale, Sprague.
Feb. 24—A. D. Dunn Shorthorn sale, Wapato.

FARM BUSINESS AND MARKETS OUTLOOK

The seven leading live stock markets received approximately over a million head of cattle less in 1921 than in 1920.

Possibly 10 per cent of the cattle sent to market in 1921 came from the sale of breeding rather than the annual beef product.

The great majority of the cattle are warmed up and short fed steers of medium and light weight.

Prime and choice steers have practically disappeared from the market platter.

Trainloads of hogs are required to satisfy the demands from the Pacific coast.

Another light supply of lambs restored all the December loss in values.

The holiday season, usually a dull period in wool trade, is marked by further advances in the staple this year.

Sharp break in grain values followed disturbing financial news of the week.

The official estimate upon the condition of new winter wheat as of December 1 was 76 per cent, which is the lowest on record.

The holiday period has dulled the demand for by-product feeds.

Receipts of hay at distributing markets, as well as country loadings, are light.

Egg prices broke sharply on both fresh and storage goods.

During the week about 2300 casks of Danish butter and 3800 boxes of New Zealand butter arrived at New York, while about 20,000 boxes of Australian butter arrived at San Francisco.

CATTLE SUPPLY DECLINED IN 1921

During 1921 the seven leading live stock markets received approximately 9,123,000 head of cattle compared with 10,418,000 in 1920, 12,375,000 in 1919 and 13,200,000 in 1918. If consumption during 1921 had been as heavy as in 1918, supply during the last year would have spelled shortage.

Exports of beef and purchases for army use have dwindled to small dimensions and per capita consumption of beef by our civilian population in 1921 averaged about 20 per cent less than in 1920.

The exact extent of curtailment in beef production in the last three years can not be determined. Possibly 10 per cent of the cattle sent to market in 1921 came from the sale of breeding stock rather than the annual beef product.

This increment in market supply will be absent in 1922, it is generally believed, and if restocking is carried on through 1922, further drafts will be made upon the supply of cattle which might otherwise be available for slaughter. The process is said to have been started already through the funds provided by the War Finance

from Texas, now the leading producer, into the middle west where they may be marketed during the coming winter instead of during the spring months when they usually arrive. Shipments of feeder lambs from the 12 leading markets in the last eight weeks have been nearly as large as in the same period of 1920. Furthermore, dressed lamb prices are nearly out of line with prices on other meats. Some feeders have been taken from the Chicago market up to $10.75, but in view of the elements in the situation just enumerated, purchases on this basis do not look attractive.

Seven leading markets received about 11,756,000 sheep and lambs during 1921, compared with 11,117,000 in 1920, 14,340,000 in 1919 and 12,150,000 in 1918. The gain in 1921 was undoubtedly due to liquidation in the first half of the year, which suggests a reduction in 1922. Undoubtedly sheep and lamb production has been decreased more drastically in the last three years than cattle or hog production. The decrease shown by the census of 1920 when compared with that of 1910 also is to be remembered. Receipts at seven leading markets during December amounted to about 780,000 head compared with a six-year average for the month of 840,000 head.

WOOL MARKET IS RISING.

The holiday season, usually a dull period in wool trade, was marked by further advances in the staple this year. Mills apparently have been obliged to buy to complete their orders and some speculative buying continues.

The woolen goods trade is still in an unsatisfactory state and clothing manufacturers are said to be cutting prices to move heavy stocks.

The Boston market is quoted as follows—scoured basis: Oregon—Eastern No. 1 staple, 88@90c; fine and fine medium combing, 80@85c; eastern clothing, 65@70c; valley No. 1, 75@78c.

Territory—Fine staple, 90@92c; one-half blood combing, 78@81c; three-eights blood combing, 55@60c; one-fourth blood combing, 50@53c; fine and fine medium clothing, 68@72c; fine and fine medium French combing, 78@84c.

FINANCIAL NEWS UNSETTLES GRAIN

Financial news governed the action of the grain market during the past week. The failure of a leading grain exchange firm, the taking over of two Chicago banks to prevent their failure, the collapse of a huge Italian bank and other events of less importance but of like character, together with circulation of numerous rumors, shook confidence and resulted in a sharp break in values. These seem to have largely spent their force and partial recovery has already been made.

Foreign grain markets have been quiet because of the holidays and domestic mills are still waiting for the expected increase in flour demand to materialize. Receipts at primary markets for last week were the lightest since April, 1920. Some seed wheat and seed rye will be purchased in the United States for Russian relief and the soviet government is expected to buy about 5,000,000 bushels of seed wheat, much of which may be purchased at Winnipeg. The United States still has about 15,000,000 bushels or more of durum wheat which must be sold abroad. Outside of these elements in the situation, it is quite possible that Argentine and Australian wheat will soon take the center of the stage in the export trade.

WINTER WHEAT LOWEST ON RECORD.

The official estimate upon the condition of new winter wheat as of December 1 was 76 per cent, which is the lowest on record. It compares with 87.9 on December 1, 1920, and a 10-year average of 89. The acreage estimate was 44,293,000 or about 550,000 acres less than the revised estimate for last year. Based on an average plow-up and an average season, these estimates point to a yield of about 520,000,000 bushels compared with 587,000,000 bushels which is the revised estimate for 1921. The low condition may mean more than the average abandonment next spring. During the next six or eight weeks, weather conditions in the southwest will not be much of an influence in speculative markets, but unless a decided change comes to pass, crop damage reports will be numerous by March.

RUSSIAN RELIEF PURCHASES HELP CORN.

About 3,100,000 bushels of corn have been bought for Russian relief and more purchases are expected shortly. It is reported that around 18,000,000 bushels will be bought for that purpose before the funds are exhausted.

CLOVER SEED ESTIMATE RAISED.

The final estimate on the 1921 clover seed crop was 1,411,000 bushels. This is larger than the preliminary estimate, but the 1920 crop figures were also revised upward and the 1920 yield remains only about 72 per cent of the crop during the preceding year.

Toledo, per bushel—Prime clover, $14; prime alsike, $11.40; prime timothy, $3.12½.

HOLIDAYS CURTAIL FEED DEMAND.

The holiday period has dulled the demand for by-product feeds. Wheat feeds continue to be offered for future delivery at prices below the spot market, apparently anticipating increased flour mill operations after the first of the year.

Chicago—Bran, $25.50; standard middlings, $25; flour middlings, $28; cottonseed meal, 43 per cent, $44; 36 per cent, $40; hominy feed, $22.50; gluten feed, $36.65; linseed oil meal, $47; tankage, $50@55.

HAY RECEIPTS ARE LIGHT.

Receipts of hay at distributing markets as well as country loadings are light. Postponement of the freight rate reduction has been a factor. Demand is limited.

The final estimate upon the crop was 96,802,000 tons compared with 105,315,000 tons last year and 104,760,000 tons in 1919.

Chicago—No 1 timothy, $22@24 No. 1 light clover mixed, $21@23; No. 2 timothy, $19@21; No. 3, $17@18; No. 1 clover, mixed, $18@20; sample and threshed hay, $12@16; No. 1 clover, $17@19; No. 1 to choice alfalfa, $17@23; Nebraska and South Dakota prairie, $15@17; rye straw, $15@16; oats, $13@14; wheat straw, $12@13.

SHARP BREAK IN EGG MARKETS

Egg prices broke sharply last week on both fresh and storage goods. Dealers report that fresh eggs were never more abundant at this season of the year. The four leading cities, Chicago, New York, Boston and Philadelphia, received about 45 per cent more eggs during December than in the same month of 1920. In spite of this increase in supply, cold storage holdings at these points during the month decreased about 7 per cent more than in December last year, showing the breadth of consumptive demand. Receipts for the entire year at these markets totaled about 14,250,000 cases compared with about 12,400,000 cases during 1920.

The poultry market seems to be working into a stronger position since receipts at the four leading cities during December were only slightly larger than in December, 1920, and cold storage holdings also gained only a trifle more than in the corresponding month last year. During November large gains over the same month of 1920 were noted in both receipts and cold storage holdings.

FOREIGN BUTTER DEPRESSING PRICES.

During the past week about 2300 casks of Danish butter and 3800 boxes of New Zealand butter arrived at New York while about 20,000 boxes of Australian butter arrived at San Francisco. Some of the latter is said to be moving east. Danish butter is still offered at 30 to 31 cents c. i. f. and New Zealand at 29 to 29½ cents c. i. f. New York. The duty is 6 cents. With an abundance of foreign butter and rather heavy supplies of domestic butter at the principal distributing markets, buyers have not been anticipating their needs ahead and prices declined further during the past week, especially at Chicago, which was above its usual parity with the east.

Receipts of butter at the four leading markets, Chicago, New York, Boston and Philadelphia, during December totaled about 43 per cent more than in the same month of 1920. Cold storage holdings decreased during the month about 12 per cent less than in December, 1920.

GOOD HOLIDAY CHEESE TRADE.

Demand for cheese is never large at this season of the year, but was maintained last week much better than generally expected. Prices remained steady most of the time, but declined toward the close in line with lower country markets.

Receipts of cheese at the four leading cities during December were about 400,000 pounds less than in the same month of 1920. Cold storage holdings at these markets decreased about 600,000 pounds more than in December

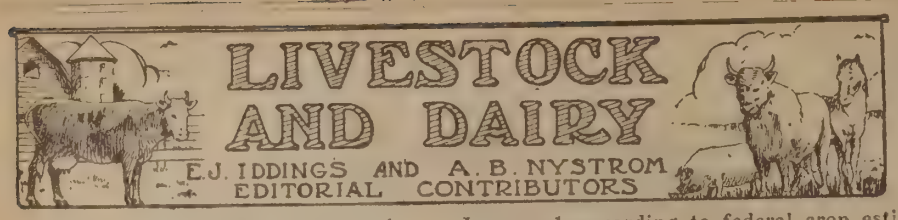
(Continued on page sixteen.)

Little Journeys to Market

THE CHICAGO HORSE MARKET.

The horse market at Chicago is an adjunct of the Union stock yards. It is located in a separate part of the yards, the horses being housed in the buildings in which the live stock exhibited at the International Live Stock show is stabled.

Some of the horses are sold privately. The buyers make the rounds of the stalls and any individuals they wish to see are taken out and put through their paces.



Most of the horses are sold in the auction ring. Just before they enter the ring, commonly known as the "bull pen," the horses are examined by a public inspector employed by the stock yards company, not by the horse commission firms. He determines the age, the soundness of eye and limb, blemishes and such defects of conformation as "buck knees." This information is given to an attendant seated inside the "bull pen" who shouts it through a megaphone when the horse enters the ring. The buyers at the ringside are supposed to make their bids with these facts as to age and soundness in mind. Another clerk records the information on a tag which is tied to the horse's halter when it is sold. The buyer immediately examines the horse for other unsoundnesses; if he finds them he can reject the animal.

While the auctioneer is crying the sale, a group of ring attendants is busy cracking whips and keeping the horse, usually badly frightened, on the jump up and down the ring, and talking up the sale with such eulogies as "There's a doll," "cheaper'n a broom" and "there's a good chunk." A mantle of charity is thrown over all defects so that a bad eye merely has a "nickel's worth of feather" in it; a spavin becomes a "coarse hock" and a horse with broken wind has only about "a cent's worth of heaves."

After a horse is sold, it is taken outside and hitched to a wagon or dray and the wheels locked. It is moved at a walk and at a trot, the buyer watching for signs of lameness, bad wind or string halt. If he finds such unsoundnesses, he is at liberty to reject the animal or to insist on a reduction in the purchase price.

Feed Not at Fault

I have a 4-year-old cow that will be fresh next February. She is in good health. I raise the cream in pans and the third and fourth milkings taste slightly bitter, and there is a stronger bitter taste in the butter. I feed oat hay straight (carrots or mangels), mill run and alfalfa meal twice a day and a wood lot for pasture during the day. Other neighbors with the same pasture do not complain. Is there anything I can do in feeding or otherwise to prevent flavor?
Olympia, Wash. SUBSCRIBER.

I don't believe the trouble is caused by the feed nor from lack of exercise, but rather by the presence of certain bacteria which cause the cream to become bitter. These may come from the water in which the utensils are rinsed or they may come from the contamination of the milk during milking.

Scald all utensils and strainer cloths thoroughly after using. Use boiling hot water, or better still, sterilize them by boiling for 10 minutes after each washing until the trouble is over. Do not attempt to dry the tinware or crocks with a cloth after the sterilization, but shake off all free water, then put them where they will dry from the heat in them. A. B. N.

Keep After Hog Cholera

Some persons think that the use of anti-hog cholera serum has become so general that we are far on the way toward the elimination of the disease, but a cleanup of cholera can not be expected through the use of this method. Besides, only a small percentage of the hogs in the country are treated each year and there is also almost a complete turnover of the swine population each year. Every 12 months we start with a new lot of pigs and the fight against disease must start at the beginning again.

Only about 10,000,000 hogs are treated annually. In recent years there have been around 70,000,000 hogs in the country on January 1, according to federal crop estimators, which means many more hogs in the spring and summer. If all these hogs were treated cholera would not be eliminated. It would simply be made impotent to kill many hogs for one season and would begin to kill again the next season if serum were not used. Serum treatment, like insurance, can not be allowed to lapse, and the government bureau of animal industry urges increased vaccination year in and year out, together with sanitary precautions to make the disease less likely.

Oats and Wheat for Cows

I would like to know how to mix some oats and wheat for my cows. I intend to have the oats and wheat ground. H. R.
Roy, Wash.

Ground oats and wheat may be mixed in the proportion of two pounds of oats to one pound of wheat, and used as a grain ration to supplement alfalfa or clover hay and corn silage. A handful of linseed oil meal at each feed in addition would be beneficial. If grain hay or mixed grass hay is used the grain should be three parts oats to one part of wheat. Rolled wheat is better than ground. If no silage or other succulence is available feed heavier in oil meal. A. B. N.

IS RUNNING BIG CHANCE.

It is almost never advisable for an inexperienced man to begin in any branch of the live stock business on a large scale. He is sure to make a mistake at first, which, with a large beginning, may result in heavy losses.

LIFE PRESERVERS FOR LIVE STOCK

By DR. E. E. WEGNER, W. S. C.

RESPIRATORY TRACT—ARTICLE 7.

Pneumonia (Continued).

The first change that takes place in the lung as a result of a disturbance that is to result in pneumonia is that of a congestion of that organ, or a condition where the blood is overfilling the vessels and the organ itself is seen to be red and heavy and solider than normal, resembling liver. Though not as solid as that organ, it has lost its characteristic spongy appearance and light weight. At this stage of the disease the temperature is elevated and the animals are likely to be chilling and trembling at frequent intervals, refusing food and showing little interest in the things that are going on about them. They do not lie down for any length of time during this period, but seem to be more comfortable when standing up. If they lie down they are likely to rise again after a very brief period and remain standing for quite a while.

At this stage the proper home treatment is to try to get the animal warm as quickly as possible. They should be heavily blanketed with woolen blankets if possible and the legs with woolen bandages as high as the knees and hocks. They should be put into a warm stall free from drafts, but having free access to the fresh air. Hot salt packs or other forms of external heat may well be applied under the blankets. Hot stimulants are also in order, but as it is difficult to get the old standard for that purpose, hot coffee is probably as good as anything that can be obtained. Your veterinarian may be called at this time to good advantage, as the treatment of the case properly in the very early stages may be the means of cutting the attack short and preventing a long and serious illness. Many of these taken early can be corrected so that the animals are quite well again in a few days, while if they are neglected in this early stage many losses result. It is well to treat any disease early in its course, but this is particularly true in pneumonia, and careful nursing is probably of more value than drugs in pneumonia, for certainly any amount of drugs without proper nursing, keeping warm and away from drafts, etc., will be of little value.

In Advanced Cases.

Many cases, however, do go beyond this first stage, either because the owner does not realize what is occurring or because the animal is not where the owner can see it at frequent intervals, as when animals are out at pasture in the winter. In these more advanced cases the animals have continued fever, refuse their food to quite an extent, do not care to move about at all unless urged considerably and stand practically all the time; if they lie down it is for only a few minutes, as they become so uncomfortable that they rise again very soon. A discharge appears at the nose, first rather thin and rust colored,

Her Comfort is Your Gain

TO neglect any discomfort of the udder or teats is costly. The slightest soreness or abnormal condition makes the cow restless and reduces the flow of milk.

Cuts, Chaps, Scratches, any congestion or inflammation can be quickly cleared up by using Bag Balm, the great healing ointment for cows. Caked Bag is promptly reduced by this softening remedy. A great aid in treating Bunches and Cow Pox.

Bag Balm, in the liberal 60c package, is inexpensive insurance against serious troubles. Keep a package on hand. Sold by general stores, feed dealers and druggists. Booklet, "Dairy Wrinkles," Free.

You are entitled to the benefit of the doubt. Why not take advantage of it?

The law is very careful in protecting the rights of a prisoner charged with a crime.

How about the Law of Common Sense and the man who has committed an error only? Isn't this a good place to use the benefit of the doubt, too?

Take your own case: If you don't know for sure whether tea or coffee is harming you, you do know that many are harmed by the drug element in tea and coffee, and that headaches, nervousness, or high blood pressure are symptoms which often tell that the drug, caffeine, is giving the nervous system too much jolt.

Probably you know, too, that some people can't drink a cup of tea or coffee at bed-time, and sleep well that night.

Where many have been harmed by tea and coffee, and you may be harmed, isn't it well to put the benefit of the doubt on your side before doubt becomes an unpleasant certainty?

There's charm without harm in Postum—a pure cereal beverage, rich in flavor, fully satisfying; the favorite table drink of thousands.

Suppose you try giving yourself this benefit today, and keep up the test for ten days; then judge the results. See if you don't feel better and work better. You can get Postum wherever good food and drink are sold or served.

Postum comes in two forms: Instant Postum (in tins) made instantly in the cup by the addition of boiling water. Postum Cereal (in packages of larger bulk, for those who prefer to make the drink while the meal is being prepared) made by boiling for 20 minutes.

WANT ADS offering farms, live stock, poultry, second-hand machinery and a hundred and one other things on "Want Ad" page of this issue.

without odor, but changes in a few days to one of a whitish-yellow color with an offensive odor, which persists until the animal is quite well again, but in any case the breath carries this odor for a considerable time.

The course of this disease varies from 10 days to several weeks, depending upon the amount of lung tissue that is diseased. If the amount is very large and the animal has not the best of care the result is likely to be death. In any case the animal loses flesh very rapidly during the course of the trouble and should be given any foods that it will eat. Grain and any concentrated foods are to be given to keep strength up as much as possible.

Even if the animals make a recovery the period of convalescence is likely to be rather long and the animals can not be put to work for several weeks or even months in severe cases, largely because of the fact that anything that affects the breathing apparatus causes the animal a weakness that makes heavy work impossible. The shortness of the breath must be overcome before the animal can be put to its accustomed work. In many cases it is well to turn the animals out to let them rusticate for a number of weeks before again putting them in the harness.—Copyright, 1922, by E. E. Wegner.

VETERINARY

By DR. S. B. NELSON.

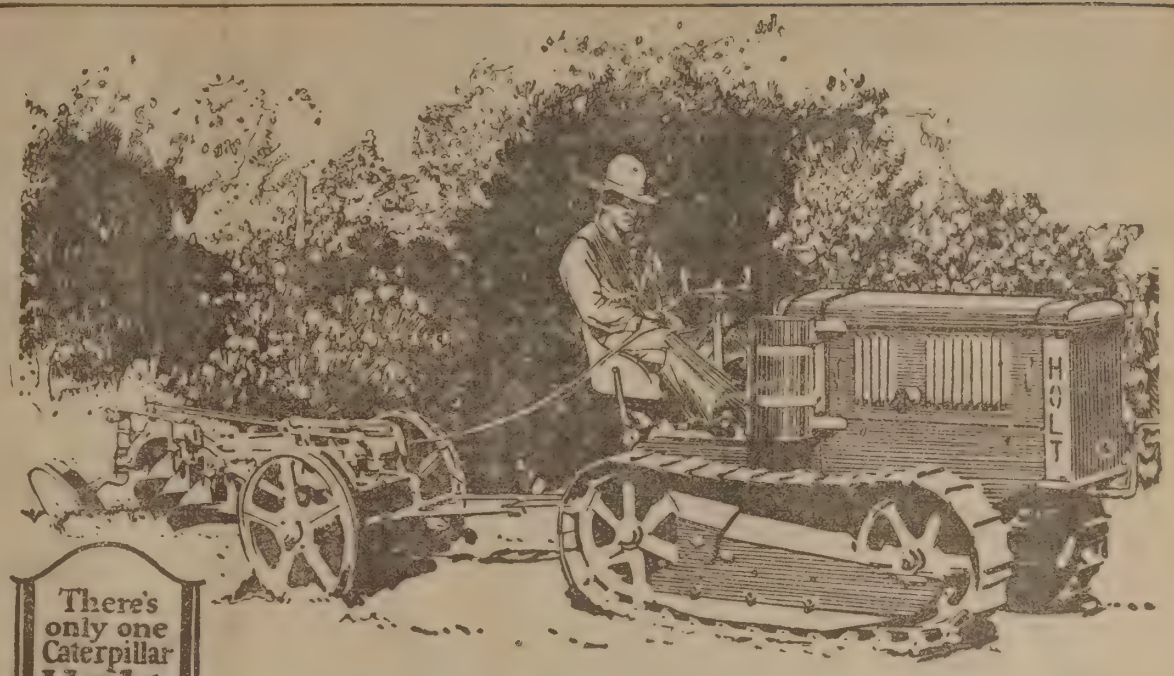
Gives Bloody Milk.—My 2-year-old heifer gives bloody milk from one of her front teats. Sometimes the milk is just blood and sometimes it comes in big blood clots. She was fresh last June. She is fed oat hay, bran and shorts and carrots.
Waukon, Wash. A. J. M.

Try giving your heifer a teaspoonful of hypo-sulphite of soda in a pint of water once daily.

Udder Is Leathery.—I have a cow that her udder seems to be getting like leather in front of her right front teat and runs up to her body and it seems to be spreading. I also have a heifer that was fresh for the first time in October and she has little specks of blood in her milk. It seems to be all from one teat.
Everett, Wash. SUBSCRIBER.

The leathery appearance of the skin in front of the udder is probably a bacillus necrosis infection. One of the best remedies for this is a mixture of one part of nitric acid with six parts of water. Then apply to the affected part with a glass rod once daily. Regarding the heifer with small specks of blood in her milk, try giving her a teaspoonful of hypo-sulphite of soda in a pint of water once daily.

Cow Has Poor Appetite.—I have a Jersey cow 7 years old that has been milking since she was 17 months old. Last August she had a severe sick spell and her milk dried up and she became thin. I do not know whether it was caused by arsenate of lead poisoning or that grass parasite, which was prevalent at the time. She seemed to recover and her milk came back nearly to normal, but she was never hungry. For the last month she has been going down in flesh, milk and appetite. I feed alfalfa hay, bran or shorts, beets, squash and she is on green alfalfa pasture, but eats only a mouthful or so of anything. A. O. B.
Grandview, Wash.



Give your cow a tablespoonful of compound tincture of gentian in a pint of water morning and evening.

Trim Horse's Foot.—How can I cure thrush in a horse's foot? It does not bother very much in a walk, but does when trotting and is worse in winter than it is in summer. N. E.
Ush, Wash.

Trim your horse's foot out until it is perfectly clean. Trim a little bit of the sole and a little bit of the frog off everywhere until you come to good, healthy tissue. Then pour into the foot tincture of iodine sufficient to wet it quite thoroughly all over the sole and frog of the foot. While damp apply a quantity of calomel and put on an absorbent or jute pack. Inclose in a bag or sack, so as to retain the same in place. Give this treatment every one, two or three days, as might be necessary after the first treatment.

Give Epsom Salts.—Please tell me how to take care of my cow. She is to be fresh some time in January. She seems to be constipated. I am drying her up. She is 6 years old. I have not had any experience with cows, so do not know what to feed her or how much. C. VAN S.
Manette, Wash.

Give your cow a handful of epsom salts in her drinking water or in a drench. If she is not too heavy a milker, feed her carrots or roots. If she has been dried up do not feed her the roots while you are trying to dry her up. If she is a heavy milker keep her on dry food and give her the epsom salts as indicated. Give her plenty of water. Outside of these general precautions, take care of her as you would at any other time.

The achievement of a high ideal

Except for the jealous care with which the Holt name and reputation are guarded, the production of a small "Caterpillar" Tractor would have been a far easier task. But the exceptional performance of the larger Holt tractors, and the high expectations of those who have awaited a small tractor of Holt quality, set a standard that has been fully and perfectly met in "Caterpillar" T35 Tractor. It is small in size, big in power. It is light weight, has big track area, ground pressure less than four pounds per square inch. It is simple, has easy accessibility, complete enclosure from dust and dirt. Most important of all, it possesses the dependability and endurance that mean uninterrupted service and long life.

The T35 fills every power requirement of small farms and is a handy unit to supplement power needs on large acreages. It is ideal for orchards, vineyards and berry fields. It is a desirable size for road patrol work, hauling and general contracting. It has almost unlimited usefulness for belt work—operating a small thresher, pumping, sawing wood, grinding feed, etc. "Caterpillar" T35 Tractor is not only built for service—it is backed by service, too. A factory on the Pacific Coast and a complete service organization in the Pacific Northwest are ready and able to see that you get service—anywhere, any time. Write at once for descriptive literature showing how the T35 will do your work quicker, better and at less cost.

POULTRY

Hens Feed the Pigs

"My chickens have been paying for the feed for the pigs. They bring in as big a check per month as the cows, and I know they do not cost as much to feed, so I know there is good money in a farm flock," said Mrs. Grant Gleason of Chehalis, Wash.

Mrs. Gleason has White Leghorns. She keeps them in a good, modern poultry house and does not let them go haphazard, as too many farm flocks are allowed to do. She feeds a commercial egg mash, gives them sprouted oats every morning, and mixed wheat and oats for a scratch feed. This latter is just as it was threshed and a cheap feed.

Meat for Chickens

How to Prepare for Following Year

I have a poultry ration that calls for mill run, which I can not get. Will you tell what proportions of the different mill feeds there is in mill run? How could I cure and prepare meat in winter, to be used as meat scraps or meat meal for chickens the following year?

Eltopia, Wash. SUBSCRIBER.

Mill run is an offal from wheat in the process of making flour. It contains both the bran and middlings. Sometimes it may contain ground wheat screenings and other byproducts. Poultrymen prefer clean, sweet bran to mill run. The bran should not be too coarse; that is, should not be in too large flakes. You should be able to obtain bran of good quality in your district.

If you have any means of drying meat to contain not more than 10 per cent moisture and if you have equipment to grind it up, it could be prepared in this way for poultry. However, the average poultryman who wishes to preserve meat for feeding chickens will find it easier to cure it like corn beef and before using it soak the salt out of it and cook it for the chickens.

The following is a standard recipe for corning meat:

"The pieces commonly used for corning are the plate, rump, crossribs and brisket, or in other words, the cheaper cuts of meat. The pieces for corning should be cut into convenient-sized joints, say, five or six inches square. It should be the aim to cut them all about the same thickness, so that they will make an even layer in the barrel. When the meat is thoroughly cooled it should be corned as soon as possible, as any decay in the meat is likely to spoil the brine during the corning process. Under no circumstances should the meat be brined while it is frozen. Weigh out the meat and allow eight pounds of salt to each 100 pounds; sprinkle a layer of salt one-quarter of an inch in depth over the bottom of the barrel; pack in as closely as possible the cuts of meat, making a layer five or six inches in thickness then put on a layer of meat; repeat until the meat and salt have all been packed in the barrel, care being used to reserve salt enough for a good layer over the top. After the package has stood over night add, for every 100 pounds of meat, four pounds of sugar, two ounces of baking soda and four ounces of saltpeter dissolved in a gallon of tepid water. Three gallons more of water should be sufficient to cover this quantity. In case more or less than 100 pounds of meat is to be corned, make the brine in the proportion given. A loose board cover, weighted down with a heavy stone or piece of iron, should be put on the meat to keep all of it under the brine. In case any should project, rust would start and the brine would spoil in a short time.

"It is not necessary to boil the brine except in warm weather. If the meat has been corned during the winter and must be kept into the summer season it would be well to watch the brine closely during the spring, as it is apparently more likely to spoil than at any other season. If the brine appears to be ropy or does not drip freely from the finger when immersed and lifted it should be turned off and new brine added, after carefully washing the meat. The sugar or molasses in the brine has a tendency to ferment and, unless the brine is kept in a cool place, there is sometimes trouble from this source. The meat should be kept in the brine 28 to 40 days to secure thorough corning."

W. A. LINKLATER,
Western Washington Experiment Station.

Mixing Dry Mash

Not every poultryman who mixes dry mash for his flock, realizes the importance of thoroughly mixing the ingredients, says Mrs. George R. Shoup, poultry specialist at the western Washington experiment station. Good, wholesome mash material, poorly mixed gives the birds a poor mash, dangerous alike to production of eggs and the health of the birds.

To thoroughly mix dry mash, select a clean floor space in the feed room and spread (not pile) the ingredients layer upon layer, until all are used. Shovel from this pile into another until the volume is all moved. Shovel back again in the place just emptied and then the third time, shovel into the final position against the wall or in a corner. By thus mixing, three times over, a uniform mixture is made and the fowls are safeguarded against the danger of overeating on unmixed highly concentrated protein feeds in the mash.

The improperly mixed mash is indeed "a feast or a famine." A few days the birds find one or two products in the mash and then a new set of feeds, so that the mixture is neither good tasting, nor satisfying to them.

Buy good ingedients, mix thoroughly and feed moderately. It pays in health of birds, as well as in maintenance of egg production.

Lack of Ventilation Causes Loss

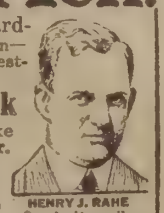
The different percentages in the egg hatches about the state are due to two distinct sources, according to W. D. Buchanan, poultry specialist of the state college.

The first in the prevalence of disease in the parent stock, while the second is a lack of vigor.

There is, however, a factor which seems to cause a greater loss than either of the above, and which is often the limiting factor in the reproduction of stock. That is the lack of ventilation in the brooders. It is rather surprising to find the loss from this source to be so high. Much of it, however, is due to overheating and improper attention and it should be a simple matter to bring the percentage down to a lower level.

Can Anybody Beat This?

Eggs containing two yolks are common. Occasionally one large egg, complete in every detail, will contain another complete egg, shell and all. How common, however, is a three-yolked egg?



E. W. Corner of Spokane reports that one of his White Wyandotte hens, a yearling, recently produced an egg with three normal yolks in it. The egg was extra large, but did not contain sufficient white for three normal yolks.

ORCHARD

GRANVILLE LOWTHER
EDITORIAL CONTRIBUTOR

Mice in Orchards

Ernest M. Curry of Amboy, Wash., writes saying: "I see by the paper that the field mice are doing considerable damage to orchards in Yakima. I came from Ontario, Canada, and the mice there do a great deal of damage to orchards. One man told me he never lost a tree from this trouble. When I asked him what he did he said, "Rub the bark of your trees with old-fashioned castor oil. Apply it in the fall and the mice will never touch them."

I can not vouch for the remedy, for I have never tried it.

Professor H. F. Wilson estimated that one field mouse, fully grown, would consume 25 to 36 pounds of food per year. At that rate, if they feed largely, or even in a considerable degree upon the bark of young trees or the roots of old ones, they would in a short time do considerable damage.

The orchards that are most infested with them are those that furnish grass, weeds and other materials for food and nesting. The growing of alfalfa in the orchards is an incalculable benefit, but it furnishes at the same time nesting places for mice. It is a little like the keeping of cats to kill the mice, at the same time the cats kill the birds that feed on insect pests that damage the trees and fruit. Clean cultivation will destroy many of the nests and young mice, but perpetual clean cultivation will impoverish the soil.

Poisons have generally been considered the most effective remedy, and among the poisons strychnine or arsenate of lead are most common. Strychnine is usually preferred and is prepared by soaking wheat, oatmeal or corn over night in a sirup prepared as follows:

Dissolve an ounce of strychnia sulphate in a pint of boiling water, adding a pint of thick sirup. This will make a quart of thick, poisoned sirup, which is enough to poison a half bushel of grain. Smaller proportions may be used as needed. If the solution is not sufficient to wet the grain thoroughly add a little water.

There is danger of destroying useful birds and, therefore, the poison should be placed under boards, the ends of which rest on cross pieces, or in some way to prevent the birds from getting it. In case of moles and gophers, the poison can be placed in their burrows or runways.

Gophers feed mostly on roots, and the tender roots of trees are greatly damaged by them. Poisoned raisins are very frequently used for their destruction.

G. L.

White Pine Blister Rust

The white pine blister rust, which has been found in three different localities in Washington, is destructive to white pines of the entire northwest, according to plant pathologists and botantists who have been on the lookout for the disease. While this disease does its greatest damage to the pine forests, which are completely destroyed in from 3 to 10 years after becoming infected, the currant and gooseberry industry is also affected, since both plants are necessary to complete the life cycle of the disease.

"If this disease is not checked in the northwest it will cause the destruction of all black currants and gooseberries wherever affected," said J. H. Hotson, botanist of the University of Washington. "It is true that there are not many of these berries grown as a commercial crop except in a few sections, but the disease will spread through the woods by means of the wild black currant. The greatest damage will be when the white pine forests are affected in eastern Washington and in Idaho.

"Whenever any one finds yellowish spots on the under side of the leaves of black currants or gooseberries they should send a few specimens to the state college experiment station or take them to some plant pathologist in order that they ascertain for a certainty where the disease is spreading."

Mr. Hotson has just returned from a meeting of representatives from the three Pacific coast states and Idaho, who drew up suggestions to offer congress to be passed which would provide means for combating the disease. Those who attended the meeting were assured that such a measure would undoubtedly pass congress, since there are many thousand acres of government timber that will be affected by the disease. Approximately $150,000 is needed to combat the trouble.

When to Prune

Would you please inform me when it is the best time to prune fruit trees?
Olympia, Wash. MRS. W. Z.

Fruit trees can be pruned any time from now until the buds start in the spring. In western Washington it is wise to delay pruning as long as possible in winter, so that the wounds will not be exposed long to the winter rains.

Summer pruning: Trees making excessive wood growth at the expense of fruit can sometimes be induced to form fruit buds by pruning during the latter part of July or in early August. J. L. STAHL, Western Washington Experiment Station.

CUT BACK FILBERT TREES.

In England filbert trees three feet in diameter are allowed to grow only five and one-half or six feet tall. They have a spread of 20 to 30 feet. The new wood which forms as the result of constant pruning is the wood which bears the crop.

GET READY FOR SPRAYING.

If you are not already familiar with the sprays needed and the proper methods of applying them in your orchard at just the right season, spend a few winter evenings studying on this subject.

A SLOW PROCESS.

Do not get in a hurry. You can not expect large quantities of fruit from your apple trees until they are from five to eight years old.

STRAWBERRY PLANTS
From Whitten always grow
Because 32 years' experience gives us the "know how," Whitten plants always grow and produce large, luscious berries all season. Exceptionally heavy-rooted, healthy plants guaranteed. Announcing the Advent of the New Force in the Fight against

Insect Pests *and* Fungus Diseases

This will announce the opening of the Dosch Chemical Company, with general office and plant at Louisville, Kentucky, an organization devoted to the preparation and distribution of fungicides and insecticides which the research of Experiment Stations and the field work of County Demonstration Agents have shown to be scientifically correct and commercially practicable.

With the firm conviction that the dusting method of insect and plant disease control offers the brightest hope of profit to the fruit and vegetable grower, the Dosch Chemical Company will concentrate upon the production of the finest dust and the best dusting machines.

This belief represents the combined experience of the plant pathologists, entomologists, practical fruit men, and field workers whose names are listed in this announcement.

Nevertheless, it is not the intention of the Dosch Chemical Company to offer the dusting method of control as a cure-all or a miracle worker. This organization proposes to conduct its operations upon a plane that will win the approbation of scientific research workers in this field, and the priceless confidence of the grower.

There are some territories for which we would consider desirable representation. We would be glad to hear from dealers where we have not already made connection.

Listed below are the products upon which the manufacturing ability of the Dosch Chemical Company will be centered in the endeavor to produce a better quality of dusting material and dusting machinery than have ever been made before.

PRODUCTS

Nicotine Contact Dust. Will control the various forms of aphis (plant lice), pear psylla, leaf hopper and apple red bug.

Nicotine Sulphate. Added to liquid sprays will control the pests which are controlled by nicotine contact dust.

Lead Arsenate. For all chewing insects. Mixed with dusting sulphur in the control of fungus diseases as well.

Calcium Arsenate. A powerful poison which is designed for the control of boll weevil in cotton, tobacco worm, alfalfa weevil and potato beetle.

Dusting Sulphur. To prevent apple scab, brown rot of stone fruits, cherry leaf spot and other diseases.

Copper Lime Dust. Used as a summer dust in combination with arsenate for the control of fungus diseases and chewing insects of apple, pear, plum, grape, potato and other vegetable crops. Used alone for celery and potato blights.

Dehydrated Copper Sulphate Dust. For combination with lime in copper lime dust.

DOSCH

Soluble Lime Sulphur Compound. Used in the control of San Jose and other scale insects and peach leaf curl.

Improved Dusting Machinery. Power, traction and hand dusters for fruit trees, vegetables, truck crops, cotton, tobacco, flowers and shrubs.

The Dosch Chemical Company was organized by Theodore Dosch and is amply financed to conduct its research and experimental work, being capitalized at $2,500,000. Mr. Dosch has previously organized and operated for thirteen years one of the largest companies in the United States, engaged in the manufacture of dust materials and dusting machinery.

OFFICERS

Theodore Dosch, president and general manager. Mr. Dosch has for thirteen years been a leader in the development of fungicides and insecticides and has conducted his work in every part of the United States and Canada.

Thomas T. Feeley, vice president and treasurer. Mr. Feeley was formerly a publisher, and county clerk of Niagara County, New York, and now lives at Louisville, Kentucky.

Harold J. March, secretary. Formerly Mr. March was a member of the firm of A. Bennett & Company, commission merchants, New York City, and now resides at Louisville, Kentucky.

John J. Raskob, director, Wilmington, Delaware. Mr. Raskob is also vice president of the General Motors Corporation, and vice president of the E. I. duPont deNemours Co.

Howard V. Pearsall, director, Williamson, New York. Mr. Pearsall is president of the State Bank, Williamson, New York. He is also president of the Williamson Cold Storage Company, and an extensive grower and dealer in fruits and vegetables.

The Dosch Chemical Co., Louisville, Ky.
Incorporated.

In the departments of plant pathology and entomology, and research work with fungicides and insecticides, the Dosch Chemical Company has obtained the services of some of the nationally known authorities in the field. The advice of these authorities will be freely given to any grower who is disturbed by plant diseases or insects.

RESEARCH STAFF

Dr. H. W. Dye, Pathologist. For the past five years Dr. Dye has been associated with the Plant Disease Investigational Work at Cornell University and the New York State College of Agriculture, and is well known to the New York State Growers and elsewhere through his work there. He has been employed also by the Bureau of Plant Industry of the United States Department of Agriculture in Investigational Work. Dr. Dye resigned as Assistant Professor of Plant Pathology at Cornell University and the New York State College of Agriculture to join the Research Department of the Dosch Chemical Company as Chief Pathologist.

Dr. G. E. Sanders, Entomologist. For several years Dr. Sanders has been associated with the Entomological work of the Canadian Department of Agriculture. He has been largely responsible for the general adoption of the dusting practice by Canadian growers and has developed the copper lime dust, which is coming into general use. Dr. Sanders is the foremost investigator today in the development of insecticides. He is resigning his work in Canada as Chief of Insecticide Investigations to join the Dosch Chemical Co., Inc.

DUSTS

Burning Out Stumps

I would like to know how to burn out some large fir stumps close to some buildings by the use of salt peter. A. N. Coupeville, Wash.

In my opinion it would be more practical to burn out stumps by the char pit method than to use salt peter. I am writing to the extension service, state college, Pullman, to have them send you a copy of a circular on the char pit method of burning out stumps.

If you decide to try salt peter, bore a 1½-inch hole at least a foot deep into the stump above each main root. This hole should be bored sloping. It should begin about one foot to 18 inches above the ground level and should be directed slightly downward. This hole should be packed during the winter or early spring season with salt peter, some water added and the hole plugged up. The stump will be ready to burn in the late summer. But the prospects are that a more complete job can be obtained by char pitting and with less danger to surrounding buildings.

W. A. LINKLATER,
Western Washington Experiment Station.

BUYS BOAR FROM TURNER.

Some time ago H. W. Turner of Sunnyside, Wash., sold to Robert Nelson of Cambridge, Idaho, the first prize Duroc Jersey junior boar pig, Pathfinder King, of the Western Royal Live Stock show. The pig was junior champion at the Washington State fair and is a fine individual of correct big type, good bone and strong back. Mr. Nelson is going to exhibit Durocs at the Denver stock show.

A "balanced diet" may sound confusing to many people

The facts, as explained here, are simple.

The secret of a "balanced diet" is to have food containing all the elements needed for proper nutrition. These elements are protein, to nourish the tissues; starch and sugar to furnish energy; fat to supply heat; and mineral salts to provide the material necessary for building nerves, brain, and tooth and bone structure.

Grape-Nuts, the nourishing cereal made of whole wheat flour and malted barley, served with cream or milk, is a complete food for young and old alike.

Go to your grocer today and get a package of Grape-Nuts. Eat it with milk or cream for breakfast; or with stewed fruit, jelly or jam, as a delicious dessert for lunch or dinner.

Every member of the family will relish this palatable and nourishing food—

Grape-Nuts—the Body Builder
"There's a Reason"

ESCANABA, MICHIGAN

POST CARDS BRING BIG RETURN

Many of our advertisers offer free booklets and information which is very much worth your while to send for. A postal will bring them. Why not place a dime or so in your rural mail box with a note requesting the carrier to leave you some cards? Then use the cards in writing advertisers. When you do so be sure to mention THE WASHINGTON FARMER.

FARMERS' WANT ADS

This is the farmers' "want," "sale" and "exchange" department for small advertisements of farmers, including live stock and poultry.

Advertising rates for ads running 1 to 3 times, 10c per word per insertion, with a special rate to Farmer subscribers, as follows: Ads running 4 to 12 times, 9c per word per insertion, ads running 13 times or more, 8c per word per insertion.

All commercial and land advertising 10 cents per word each insertion. Open also to nonsubscribers.

In using these columns advertisers must observe: (1) No advertisements will be inserted for less than $1.00. (2) Every word, number and initial, including name and address, must be paid for. (3) New advertisements, changes of copy or cancellations must reach general office, Spokane, Wash., 10 days in advance of publication date. (4) Cash must accompany order.

Above rates include insertion in The Washington Farmer, The Idaho Farmer and The Oregon Farmer, which constitute the Pacific Northwest Farm Trio, 49 Review Building, Spokane, Wash.

Baby Chicks.

YESTERLAID EGG RANCH, KENT, WASH. Dear Sirs:—It may interest you to know that only last week I was offered $2.50 each for my flock of 459 Yesterlaid pullets. I turned this attractive offer down, as I know from the way they are laying that I could not afford to let them go. I raised these birds out of the 1000 chix got from you last spring, and am so well pleased with their performance that I want you to be sure to reserve me another 1000 chix for delivery about March 31st, next. Please let me have your early confirmation of this order for which check is enclosed. Yours truly, Walter Smith, Kent Wash. The above is one of the many testimonials we receive. 12,000 of these kind of chicks hatched every five days from our own eggs. Over 40,000 already sold. Order day-old chicks and hatching eggs now. Yesterlaid Egg Ranch, Kent, Wash.

WHITE LEGHORN AND ILL-A-HEE BARRED Rock chicks—Buy chicks this year that live and grow and are bred to lay. Butler White Leghorns and Ill-a-hee Barred Rocks are known for high average flock production. Before ordering elsewhere, write for circular telling how our breeding methods produce 200 flocks for our customers. All stock trap nested and pedigreed. Also get our prices on breeding cockerels and hatching eggs for each breed. Address Butler Poultry Farms, or Ill-a-hee Poultry Farm, Jennings Lodge, Ore.

"FRESHLAID" WHITE LEGHORN CHICKS have the qualities you want; vigor and scientific breeding for heaviest egg production; every "Freshlaid" male is from a high record hen. Freshlaid farm is one of the largest and oldest chick plants in the Inland Empire. Our new catalog, "Success With Chicks," is free but is worth $ to you. Write for it. A complete guide from start to finish. Farmers read my plan, "$500 extra on every farm." You can't fail my way. Freshlaid Farm, Colfax, Wash.

CHICKS, PULLETS—OUR PURE BRED BABY chicks not to be excelled; all breeds at prices conforming to quality. Spring pullets in demand. We have 10,000 famous Tom Barron pullets. Booking orders now. MARSHALL STRAWBERRY PLANTS, $4 PER 1000. John Meyers, Rochester, Wash.

FARM LANDS FOR SALE. 651

LAND INVESTORS, VEGETABLE AND GRAIN growers: I have ready for cultivation, large tract, level, rich reclaimed land, no waste, free from stones or other obstacles; four to seven feet deep; thoroughly drained; government water right; 25c per year for 10 years then paid up. Produces unheard of grain and vegetable crops. At station on railroad; am selling at $120; $40 cash, then divide in four yearly payments, beginning in 2 years, 6 per cent interest; a splendid speculative investment. For nonresidents we will provide renter for term of years, paying 1-3 of crop at market and use rentals to pay up on land. A chance to have $300 land for $40 outlay, as this land will certainly more than double in three years. I can show you. Write for particulars. E. T. Staples, Box 203, Ashland, Ore.

AS CLEARING HOUSE FOR AN EASTERN loan company we offer 100 pieces of foreclosed property, mostly in eastern Washington, for the mortgaged indebtedness. Dry farms, irrigated lands, business buildings and orchard tracts; some good land under proposed irrigation projects as low as $10 per acre; no trades; no lists. Will make easy terms to real farmers. Write us your wants if you can not call. Hartford Land Co., 601 Paulsen bldg., Spokane, Wn.

LOGGED-OFF LAND IN STEVENS COUNTY, Washington, at greatly reduced prices. Most of land sells at from $5 to $20 per acre; thickly settled community; good schools; hard surfaced and paved roads to Spokane; best county in state for dairy and stock raising; most places water can be found at shallow depths. Write for folder. Phoenix Lumber Company, Dept. T, Spokane, Wash.

SNOHOMISH COUNTY, WASH.—6000 ACRES of the finest dairy, berry or general high-grade farm lands in the northwest, rapidly improving section; no drouths; bumper crops; tracts 1 to 80 acres; 10 yearly payments. This is your opportunity. Send for literature. Brownell Land Co., Birmingham, Wash.

DAIRY FARMERS INVESTIGATE THIS UNusual opportunity. Fine paying irrigated dairy and alfalfa ranch; famous Deschutes valley, central Oregon. $16,000. Small initial payment, new easy payment plan; ideal climate. Full particulars on request. Redmond Land & Loan Co., Inc., Redmond, Ore.

CALIFORNIA LAND UNDER THE ONLY U. S. government project in the state, producing oranges, olives, almonds, raisins and all kinds of deciduous fruits; splendid dairy and poultry section; progressive town; no killing frosts. For free literature, write Chamber of Commerce, Orland, Cal.

YOUR OPPORTUNITY—WE OWN SEVERAL cultivated, irrigated farms close to Boise, largest city in Idaho; will sell on 20 years' time, 6 per cent interest. See us at once. A. H. Eagleson & Sons, Ltd., Boise, Idaho.

120 ACRES NEAR CAMAS HOT SPRINGS; 100 acres irrigated from artesian well, bal. pasture; 3 springs, creek flows through place; fair buildings; $60 per acre, including machinery and horses. Neil Bratton, Camas, Mont.

640, 840 AND 1080 ACRES—THREE GOOD stock ranches. Will sell any one or all together. These divide up good; have free water right for 170 acres; some wheat land. If interested write 545, Heppner, Ore.

SHEEP RANCH FOR SALE—1120 ACRES; 150 acres hay land; Deer Lodge valley, Montana; 5 miles to summer range; fully stocked and equipped. Address owner, Box 56, Garrison, Montana.

SELL YOUR PROPERTY QUICKLY FOR cash; no matter where located. Particulars free. Real Estate Salesman' company, 501 Brownell, Lincoln, Neb.

160-ACRE DAIRY OR STOCK RANCH; IN northern Idaho; good range; running water; eighteen hundred; terms. Box 54, Kooskia Idaho.

DAIRY FOR SALE—INCOME $500 PER month. C. W. Henkel, owner, Aumsville, Ore.

FARM LANDS—Wanted 654

WANT TO HEAR FROM OWNER HAVING farm for sale; give particulars and lowest price. John J. Black, 80th street, Chippewa Falls, Wis.

TRACK'S END

By HAYDEN CARRUTH

A Stirring Story of Adventure

(Copyright by Harper & Bros.)

SYNOPSIS.

Track's End is a prairie village in Dakota in the early days at the end of the western railroad. Jud Pitcher, a lad of 18, is one of the "pioneers" who has left home to make his fortune in the west. Very soon after reaching Track's End he earns the enmity of a dangerous man, Pike. A terrible blizzard comes and one by one the settlers return to their old homes for the winter until Jud, the boy, is left entirely alone to spend the winter, with no more train service until spring. He has charge of the entire village with its store, bank, hotel, barn and the horses and the cows. Kaiser, the hotelkeeper's dog, and Pawsy, the hotel cat, are his only "human" companions. About him are dangers, including Pike and his roving gang, that promise to keep him busily occupied until the spring thawup, when the train resumes its weekly runs and the settlers come back.

CHAPTER VI.

Some account of what I do and think the first day alone: with a discovery by Kaiser at the end.

I woke up with a start in the morning, thinking that it was all a bad dream; then I knew it wasn't, and wished it were; and next I was very glad to hear the blizzard still roaring as hard as ever, which may seem odd to you. But the fact is that I had thought a long time after I went to bed and had decided on two things—first, that I was safe from the robbers as long as the storm lasted, and, second and more important, that I had a plan which might serve to keep them away for a while at least after the storm stopped. I got up and looked out of the window, but I might as well have looked into a haystack for all I saw. I could not even see the houses on the other side of the street.

I went down, said good morning to the cat and dog, and started the fire. It was colder; I peeped at the thermometer through the window and saw it was a dozen degrees below zero. I found the stock at the barn all right and cheerful; the chickens were down making breakfast of what I had given them for supper, all except Crazy Jane, who had finished eating and was trying to get out of the barn, maybe thinking that she could make a nest in a snowbank, or could scratch for angleworms.

After I had finished the barn work I went in and got breakfast. I started a fire in the kitchen and got a better meal than I had the night before. I went down cellar after some potatoes and noticed that there were a plenty of them, with squashes, pumpkins and other vegetables, all of which I knew before, but I observed that such things looked different to me now. I couldn't count much on the pumpkins because I didn't know how to make pumpkin pie, but I knew that the cow would be very glad to get them without their being made into pie. "It would be funny," I said out loud, as if there were somebody to hear, "if cows should find out some day that pumpkins are better in pies and farmers should have to fix them that way before they would eat them."

I found that I felt much better about the situation than I had the night before, though, of course, I still wished with all my heart that I was out of it all, and thought every minute what a fool I was to have acted the way I did. But there were so many things to do that I did not have time to worry much, which I believe was all that kept me from going crazy.

After breakfast I decided that the first thing I had best do was to look up the gun question. I found Sour's rifle in a closet. It was not loaded, but there was a box of cartridges on a shelf, and I wiped out the barrel and filled the magazine. It was 15-shot and .45 caliber and seemed a good gun. I stood it under the counter in the office and out of sight behind an old coat. In the drawer of the desk was a revolver. It was a .38 caliber and pretty big to carry, but I thought it might be handy to have, so I stuffed it in my pocket.

Taggart's hardware store was two doors toward the railroad from the hotel, but the sidewalk was so covered with snow and the wind swept down the street with such fury that it seemed next to impossible to get there. But I was anxious to see about the weapons, so I went out the back door and crept along close to the rear of the buildings till I reached it.

The door was locked, but I could see through a window that a box had been recently broken open, but, as there were no guns in sight, I concluded that the men had probably carried them over to the depot. I tried to see this through the driving snow, but could not, so I did not dare to start out to find it, knowing how easy it is to become confused and lost in such a storm.

As I stood back of the store I thought once that I heard the whistle of a locomotive; then I knew, of course, it was only the wind. "It'll be a long time before you hear any such music as that," I said to myself. There was nothing which would have sounded quite so good to me.

I was glad to get back to the house, where I could draw a breath of air not full of powdered snow. I spent some time calking up cracks around the windows, where the snow blew in. While I was doing this it suddenly flashed into my mind what if I should lose track of the days of the month and week? I thought I would write down every day, and got a piece of paper to begin on, when I noticed a calendar behind the desk. I took the pen and scratched off "December 17," which was gone, and which was the beginning of my life alone in Track's End, and the first thing every morning after that while I stayed I marked off the day before, and so I never lost my reckoning. Though, indeed, I was soon to wake up in another and worse place than Track's End, but of this I will tell later. I had very foolishly forgotten to wind the clock the night before, and it had stopped, and I had no watch by which to set it, but I started it, and trusted to find the clock at the depot still going, as it was an eight-day one.

I found myself hungry, and took it for granted that it was dinner time. The meal seemed pretty lonesome, because I had been used to having a great deal of fun with Tom Carr and the others at such times, much of it about my poor cooking. Kaiser and Pawsy appeared willing to do what they could to make it pleasant, and this time I put a chair at one end of the little table, and the cat jumped up in it and began to purr like a young tiger, while the dog sat on the floor at the other end and pounded the floor with his tail like any drummer might beat his drum. I also began to get them into the bad practice of eating at the same time I did, but I had to have some company.

It must have been two hours after dinner, and I was moving my bed down into a little room between the office and kitchen, when I first saw that the fury of the wind was beginning to lessen. The sky began to lighten up and from the front door I could soon catch glimpses of the railroad windmill. I saw that I must start the plan I had thought of the night before for keeping off the Pike gang without any delay. My idea was that I must not let them know that I was alone, and if possible make them think that there were still a good many people in town. I doubted if they had known the morning they left the letter that we were then reduced to six. I could not see how they should know it, and I felt sure that if they had known it they would have made an attack upon the bank.

My plan, then, was to build and keep up fires in several other houses, so that if they came in sight they would see the smoke and think that there was still a good-sized population. I went first across the street to the bank building. The lower part of it was locked, but I went up the outside stairs and found everything in Mr. Clerkinwell's rooms as we had left it. There were also inside stairs, and I went down and soon had a good fire going in the lower room, and as I came out I was pleased to see that it made a large smoke.

I next went to the north end of the street, where stood a building which had been a harness shop. It was locked, but I could see a stove inside, so I broke a back window, reached in with a stick and shot back the bolt of the rear door and soon had a good, smoky fire here, too. I decided that one more would do for that day, and thought the best place for that would be in the depot. The wind had now pretty well abated, and the snow was only streaming along close to the ground.

The depot was locked, but again I got in by breaking a window. There were the guns, as I expected—five new Winchesters like Sour's. There were also a lot of cartridges and three large six-shooters with belts and holsters. It was 3:30 by the clock, which was still going. I clicked at the telegraph instrument, but it was silent. I remembered that Tom had told me that the line had gone down beyond Siding No. 15, which was the first one east from Track's End. Everything made me think of Tom and I looked away along the line of telegraph poles where I knew the track was, down under the snow, but I could see no train coming to take me out of the horrible place.

I soon had another fire going. After that I hid two of the rifles in the back room and carried the others over to the hotel. I climbed to the top of the windmill tower and took a look at Mountain's house with the fieldglass, but could see nothing. I walked around town and looked in each of the houses with an odd sort of feeling, as if I half owned them. Kaiser went with me, and was very glad to get out.

It was just after sundown when I got back to the door of the hotel. Up the street in front of the harness shop I saw a jackrabbit sitting up and looking at me. Kaiser saw him, too, and started after him, though the dog ought to have known that it was like chasing a streak of lightning. I stood with my hand on the doorknob watching the rabbit leave the dog behind, when suddenly I saw Kaiser stop as another dog came around Frenchman's Butte. They met, there was a little tussle, which made the snow fly, then I saw Kaiser coming back on a faster run than

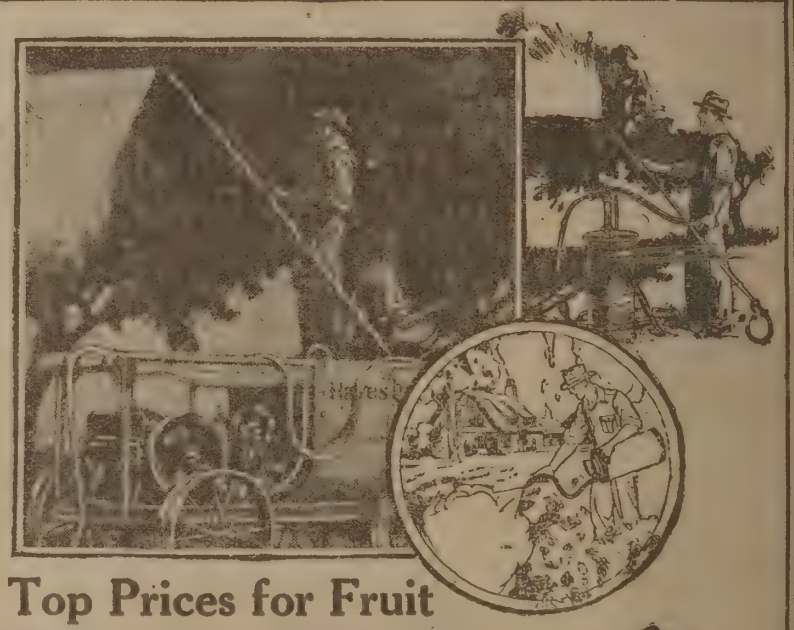
I slammed the door shut against the other dog's nose.

he had gone out on, with the other dog close behind.

"That's a brave dog I've got!" I exclaimed. I saw some other dogs come around the Butte, but I didn't look at them much, I was so disgusted at seeing Kaiser making such a cowardly run. On he came like a whirlwind. I opened the door and stepped in. He bolted in between my legs and half knocked me over. I slammed the door shut against the other dog's nose. The other dog, I saw, was a wolf.

CHAPTER VII.

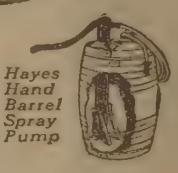
I have a fight and a fright, after which I make some plans for the future and take up my bed and move.



I don't know if the door really struck the wolf's nose or not when I slammed it shut, but it could not have lacked much of it. Poor Kaiser rushed around the stove, faced the window, and began to bark so excitedly that his voice trembled and sounded differently than I had ever heard it before. I must have been a little excited myself as I stooped to bolt the door, just as if the wolf could turn the knob and walk in. When I stepped back I met the wolf face to face gazing in the window, with his eyes flaming and mouth a little open. He was gaunt and hungry-looking. The rest of the pack were just coming up, howling as loud as they could.

I ran to the desk and got the rifle; then I dropped on one knee and fired across the room, straight at the wolf's throat. He fell back in the snow dead, and, of course, there was only a little round hole in the window pane. Everything would have been all right if it had not been for a mean spirit of revenge in Kaiser, for no sooner did he see his enemy fall back lifeless than with one jump he smashed through the window and fell upon him savagely. He had not seen the rest of the pack, but the next second half a dozen of them pounced on him. I dared not fire again for fear of hitting him, so I dropped my gun, seized an ax which I had used to split kindling-wood and ran forward. There was a cloud of snow outside, and then the dog tumbled back through the window with one of the wolves, and they rolled over and over together on the floor.

I got to the window just as a second wolf started to come through the broken pane. I struck him full on the head with the ax and he sank down dead, half outside and half inside. The others that pressed behind stopped as they saw his fate and stood watching the struggle on the floor through the window.



Kaiser was making a good fight, but the wolf was too much for him, and soon the dog was on his back with the wolf's jaws at his throat. This was more than I could stand, and I turned and struck at the animal with my ax. I missed him, but he let

FAMILY CIRCLE

ALICE BARLAND
EDITORIAL CONTRIBUTOR

Experience Letters

From Our Family Circle Women

Dear Mrs. Barland: This is the time when we need lots of bedding. I take the best parts of worn-out garments and wash and color them and make quilts, either piece them into blocks or crazy work, backs of overalls, anything and everything; the parts not good enough for the outside I use for the filling by sewing them on to strips of cloth until I get the size of the quilt. You will be surprised to see how soon you will get enough old garments or old blankets to put in place of cotton. I knot it the same as I would if the filling was cotton batting and I have quilts that can be washed and they are clean and warm. I don't make them very thick, as they are easier to wash. I have made 10 quilts and only one has cotton filling. All are pieced and knotted I never burn rags, no matter how small.

I make my pillowslips open at both ends, then they can be turned every way and they wear out alike on all sides and last more than as long again. They can be trimmed at each end or left with a plain hem.

I have quite a number of sock and stocking legs I am going to sew onto flour sacks and work feather stitching along the seams and use for the back of a quilt. There are several different colors, but they will work in, and some pieces of knit underwear, colored, will go with them.

When I read of the sisters being lonesome I wonder how it can be. It seems there is so much to do for Tom and the children that I never have time to be lonesome. I wonder if some do not forget to keep busy. MRS. L. H.

Dear Mrs. Barland: I enjoy the Family Circle and though I haven't much to contribute I want to peek in for a minute.

I live up in the mountains and I love it up here. We raise beef cattle. I have a flock of Barred Rocks and I do enjoy taking care of them. They never fail to pay their way and more. I see a good deal in THE FARMER about bald-headed hens and I want to say that it is not a disease, but lice that make them bald-headed every time.

I am sure some of you will say your henhouse isn't lousy, but if you will get a good disinfectant and use it, some good lice killer, you will find your hens will get over being bald-headed. Take good care of the hens and they will pay you every time. MRS. A. FLAHR.
Colville, Wash.

Dear Family Circle: In reply to the request for a remedy for making whooping cough easier on children I have received many recipes and I am sure among all the readers of THE FARMER there will be children with whooping cough. These home-made remedies will no doubt be good to have on hand, as children have colds, which bring on cough. Many a night I have had my sleep spoiled by trying to give relief to suffering children with a bad cough. A. W. B.

Dear Mrs. Barland: I am sending a remedy which my mother used for her 11 children and if taken in time it will prevent the "whoop." I know from experience.

Cough medicine: Slice two lemons with one-half pint of flaxseed, one-half pint of strained honey, one and one-half quarts of water; simmer, not boil, for four hours, strain, and if there is less than one and one-half pint add enough hot water to make up that amount. Keep in a cool place.

Dose: One tablespoon four times a day and one also after each severe fit of coughing.

Try oil of peppermint for chilblains. It is very effective and a very small quantity will do the work.

We use pineapple for sore throat, the raw is best, but when it can't be had the canned will do or the canned juice. Give a tablespoon every few minutes or every one-half hour till relief is received.

For a persistent cough bake lemons until soft, scrape out the pulp and sweeten with honey; take a teaspoonful after every severe fit of coughing.

We like THE FARMER in all departments and consider it worth many times the price. MRS. ELOISE D. ENGLESON.
Porter, Wash.

Dear Mrs. Barland: Can some one tell me how to clean a large rug?
MRS. N. K. H.

You do not say if your rug is soiled with grease or what. If only dusty you should take it out on the grass and have a strong man pound the dust out, or better still put it on a large rope and pound it. If you are near a cleaner it would pay to have a vacuum cleaner used on it. If your rug is soiled with grease better get some ammonia and good laundry soap and make a good suds and scrub it with a brush and dry with old cloth, then place where the air will make it thoroughly dry, but get out the dust first. ALICE W. BARLAND.

Your Health

By Royal S. Copeland, M. D., F. A. C. S.

GOOD MILK IS BEST FOOD.

There was an exposition in Cincinnati, Ohio, a few weeks ago. So well planned was it that on one evening thousands upon thousands were turned away from its doors. There was a mob in the crowded streets clamoring for admission.

Dr. Copeland.

What do you suppose it was all about? Politics? Religion? Music? Automobiles? No! It was a health exposition!

I had the pleasure of speaking there one afternoon to about 4000 persons.

It augurs well for a community when such multitudes will turn out to study health projects and to listen to discourses on right living.

There were many interesting features. Among those was a milk exhibit. Charts were displayed showing what milk does for the human family.

At a country fair or in an amusement park you have tested your strength by driving a heavy mallet down upon a wooden peg, haven't you? Your blow caused a weight to run up a registering rod. The heavier your blow the higher the weight went.

In the health exhibition there was a turntable on which stood manikins, each armed with a mallet. These were labeled: "Meat," "vegetables," "cereals," "pastry" and "milk." As the table revolved each manikin in turn struck a forceful blow and shot up the weight. Some came near the top, but every time "milk" brought down his mallet the weight flew to the very top and rang the bell.

This interesting little performance was intended to demonstrate the measure of food values. Indeed, it did show in a telling way how much milk means to us as an article of food.

In another part of the show was a great bottle supposed to hold 100 gallons of milk. It stood on a table among a lot of dinner plates, each heaped up with as much of one of the ingredients of milk as is found in 100 gallons. On each dish was a label showing the quality of the ingredients and what it does for the human body.

There were phosphorus for the bones, teeth and brain—lime for the bones and teeth—iron for the red blood—albumin for the blood and muscles—potash and soda to prevent acidity—sulphur for the blood—Magnesia for the body fluids—sugar to provide energy.

Milk is the most perfect and complete of all the foods. If we could have but one food the wise man would take milk. When it is fresh and pure, milk supplies most of our needs and will do more for us than all the rest of the foods.

It is the aim of all health officials to increase the consumption of milk. It is rare indeed to find a person who can not drink milk. At any price, good, fresh milk is the best and cheapest food.

Household Hints

By ELIZABETH QUAKER.

If the metal buttons on your coat are troublesome about cutting the threads and coming off, try threading them on a piece of fine wire. By means of a small plier make a ring of the wire and fasten the button to the garment by sewing around the wire ring.

A little strong coffee added to the starch for tan ginghams will keep them from having that "washed out" look.

Ripe tomato juice is quite efficient in removing ink stains. Simply soak the ink spot in the juice for one-half hour, then wash the garment in the usual manner. It is seldom necessary to repeat the process.

Try greasing the kettle you cook your fruit butters or jam in. This is an aid to prevent it sticking to the bottom of the kettle and scorching. Lard or some unsalted grease is best for this purpose.

If the apples you stored for winter use are not keeping well, they may be made into butter or even plain boiled and filled into what empty jars you have on hand and will be very acceptable before the fresh apple sauce season is with us again.

Be More Careful

of your teeth—combat the film

If you are brushing your teeth in a wrong way, learn what this new way means.

Authorities now advise it. Leading dentists everywhere are urging its daily use. Millions of people employ it.

Make this ten-day test and let the results show you what really clean teeth mean.

That dingy film

Film is what clouds the teeth's beauty. It causes most tooth troubles. Countless teeth discolor and decay because the old ways of brushing do not effectively fight film.

Film is that viscous coat you feel. It clings to teeth, enters crevices and stays. That is what discolors — not the teeth.

Film is the basis of tartar. It holds food substance which ferments and forms acid. It holds the acid in contact with the teeth to cause decay.

Germs breed by millions in it. They, with tartar, are the chief cause of pyorrhea.

Ways to end it

Dental science has in late years found two ways to fight film. It has proved them by careful tests. Now they are embodied in a new-day tooth-paste—called Pepsodent—for daily application.

Dentists here and abroad now advise it. It is now bringing a new dental era to some 40 races of people.

Other new effects

Pepsodent brings three other effects, natural and very important.

It multiplies the salivary flow—Nature's great tooth-protecting agent. It multiplies the starch digestant in the saliva, to digest starch deposits. They may otherwise cling and form acids.

It multiplies the alkalinity of the saliva, to neutralize the acids which cause tooth decay.

Thus every use does five things which dental authorities now regard as essential.

You'll quickly see

A 10-Day tube of Pepsodent is sent to all who ask. That shows the delightful effects. In a week you will realize that this method means much to you and yours.

Send the coupon for it. Note how clean the teeth feel after using. Mark the absence of the viscous film. See how teeth whiten as the film-coats disappear.

Watch all the effects, then read the reasons in our book. That test may lead to life-long benefits. Cut out the coupon now.

Pepsodent PAT OFF REG. U.S.

The New-Day Dentifrice

Takes the labor and expense out of every dirt moving job

High Points in News of the Week

Though there is still in Ireland a strong element opposed to the "Irish Free State" as provided in the peace treaty recently agreed upon at the British-Irish conference, that treaty was officially ratified by the dail Eireann by a vote of 64 to 57. Immediately after the vote was taken President De Valera, who has strongly opposed the treaty, announced his resignation from the presidency of the Irish republic as now existing. Indications are that the public sentiment in favor of the treaty throughout Ireland is much greater in proportion to the opposition than indicated by the 64 to 57 vote.

Under the terms of the treaty Ireland shall be officially known as the Irish Free State. It shall have the same constitutional status in the British empire as the Dominion of Canada, Australia, New Zealand and the Union of South Africa. It shall have a parliament of its own, with an executive responsible to that parliament. A provisional government is to be set up to function until the free state is officially set up, which shall be within a year. A representative of the British crown shall be appointed for Ireland in the same manner as the governor general of Canada. Ireland shall have control over all her own governmental affairs and is allowed to maintain an army as large in proportion to her population as the British army is to the population of Great Britain. The treaty gives Ulster one month in which to accept the terms of the treaty or to declare herself in favor of remaining under the British government as at the present time.

* * *

A report from Europe indicates that Britain and France are negotiating an agreement whereby England will guarantee the security of France against an unprovoked attack by Germany. It is thought probable that this guarantee, if given, will be on condition that France withdraw her opposition to the international limitation of submarines.

The allied council has been meeting in France for two weeks, debating many problems, important among which is that of demanding immediate payment of reparation installments by Germany or granting extension of time to that country, owing to her financial difficulties. It is reported that German representatives will be asked to meet with the council to discuss these questions.

* * *

The disarmament conference in Washington has reached the point of discussing limitations of aircraft for military purposes. Last week agreement was reached between the five leading powers to forbid the use of poisoned gases in future warfare. It has also been agreed that submarines shall not be used in attacks against merchant ships.

* * *

President Howard of the American Farm Bureau federation last week in a public interview vigorously defended the present agricultural bloc in congress.

"It was organized," said President Howard, "as a cross-party group to secure for agriculture some of the legislation necessary to agriculture's very life. It succeeded. The last congress passed more legislation of interest to agriculture than any congress in our history.

"Frantic appeals have been made to members of blocs in both branches of congress to 'stand by the party'; in other words, they say if your party does not give what your constituents want, abandon your constituents.

"It is the constant fear in some political quarters that the majority party will be split asunder by the agricultural 'bloc.' This fear is ungrounded, for a close analysis of the 'bloc's' action will show that the members are interested in economics of the present situation and are not playing politics, but are true to a farm bureau gospel."

* * *

A new plan for raising money to pay the proposed federal bonus to ex-service men is that the United States shall take $4,000,000,000 in British bonds as a portion of the British debt, and resell these bonds to the American public, using the money thus secured with which to pay the bonus. This is a feature of a bill now being worked out in congress which proposes that this government shall take over the bonds of the allied debtors for the $11,000,000,000 of their indebtedness. The interest rate would be 5 per cent. It is understood that this plan, including the plan for the bonus payment, has the approval of President Harding.

* * *

Indications are that there will be a vigorous fight made in congress against the acceptance of various agreements of the disarmament conference. Chief among these agreements is the so-called four-power pact between England, France, the United States and Japan for the control of the Pacific and the Far East.

* * *

There were sown last fall about 500,000 acres less of fall wheat than in the fall of 1920, according to the estimate of the department of agriculture. The total acreage of the United States is about 44,220,000.

* * *

Secretary of Agriculture Wallace has set January 23 as the date for the conference called by President Harding to take up important problems affecting agriculture. Representatives from all parts of the country, numbering some 150, are invited to attend.

Farm Business and Markets Outlook

(Continued from page five.)

a year ago. Total receipts of cheese at the four points during 1921 amounted to 172,500,000 pounds compared with about 159,500,000 pounds during 1920.

Prices for fresh No. 1 American cheese on January 4 were as follows:

Chicago—Twins, 20½@21c; S. Daisies, 21@21½c; D. Daisies, 20@21c; Longhorns, 20½@21c; Square Prints, 21½@22½c.

FRUITS AND VEGETABLES.

The final estimate upon the potato crop was 346,823,000 bushels, or about 10,000,000 bushels less than the preliminary returns. However, the estimates for 1919 and 1920 also were revised downward even more drastically which makes the 1921 crop compare more favorably with that of 1920 than was the case in the November return.

Prices for white potatoes strengthened as a result of light shipments from producing sections, but weakened again in the last few days. Northern sacked round whites are quoted at $1.75 to $1.95 f. o. b. shipping points and $1.70 to $2 per 100 pounds in principal consuming markets. Sacked rurals are bringing $1.25 to growers' wagonloads, Colorado warehouse points and $1.10 at Idaho points.

The final apple crop estimate was 96,881,000 bushels, compared with 224,000,000 bushels last year. The commercial crop was placed at 20,098,000 barrels, compared with 33,905,000 barrels last year.

The onion crop was estimated at 12,652,000 bushels, or about half the size of the 1920 crop. Production of cabbage was placed at 606,000 tons, compared with 1,029,000 tons in 1920.

Producers Open Business

The first producer-owned live stock commission company under the plans worked out by the farm bureau committee of 15 opened for business at Chicago this week. The board of directors of the National Stock Producers' association, under which the cooperative producers will operate, held its first official meeting at Chicago last week and elected the following officers: John G. Brown, Monon, Ind., president; C. E. Collins, Kitcarson, Colo., vice president; E. H. Cunningham, Des Moines, secretary-treasurer. The officers constitute the executive committee.

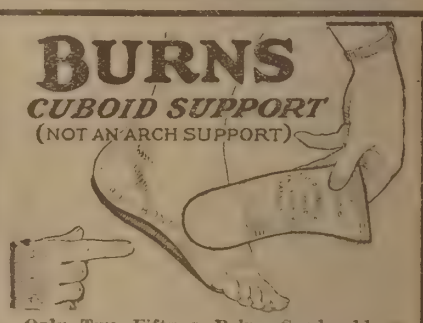
Oil Light Beats Electric or Gas



Burns 94% Air

A new oil lamp that gives an amazingly brilliant, soft, white light, even better than gas or electricity, has been tested by the U. S. government and 35 leading universities and found to be superior to 10 ordinary oil lamps. It burns without odor, smoke or noise—no pumping up, is simple, clean, safe. Burns 94% air and 6% common kerosene (coal oil).

The inventor, W. W. Johnson, 31 N. Fifth St., Portland, Ore., is offering to send a lamp on 10 days' FREE trial, or even to give one FREE to the first user in each locality who will help him introduce it. Write him today for full particulars. Also ask him to explain how you can get the agency, and without experience or money make $250 to $500 per month.—Adv.

Track's End

(Continued from page fourteen.)

go his hold, snapped at the ax, and when I started to strike again he turned and jumped through the window over his dead companion and joined the howling pack on the snowdrift in front of the house.

I seized the gun again and rested it across the dead wolf, firing full at the impudent rascal who had come in and made Kaiser so much trouble. It was a good shot, and the wolf went down in the snow. I pumped up another cartridge, but the wolves saw that they were beaten and the whole pack turned tail and ran off as fast as their legs could carry them. I took two more shots, but missed both. The wolves went around Frenchman's Butte, never once stopping their howling.

As soon as they were out of sight I had a look at Kaiser. I found him all blood from a wound in his neck, and one of his fore legs was so badly crippled that the poor beast could not bear his weight on it. I got some warm water and washed him off and bound up his throat. When I was done I heard a strange yowl, and, looking about, spied Pawsy clinging on top of the casing of the door which led into the dining room, with her tail as big as a bed bolster. I suppose she had gone up early in the wolf fight, not liking such proceedings. She was still in the greatest state of fright, and spat and scratched at me as I took her down.

I next swept up the dog and wolf fur and cleaned the floor, and after I had got the place set to rights nailed a board over the broken window and carried the three dead wolves into the kitchen, where, after supper, I skinned them, hoping that some day their hides would go into the making of a fur overcoat for me, something which I needed.

I don't know if it was the excitement of the fight, or the awful stillness of the night, or what it was, but after I had finished my work and sat down in the office to rest I fell into the utmost terror. The awful lonesomeness pressed down upon me like a weight. I started at the least sound; dangers I had never thought of before, such as sickness and the like, popped into my mind clear as day, and, in short, I was half dead from sheer fright. There was not a breath of wind outside, or a sound, except once in a while a sharp crack of some building as the frost warped a clapboard or sprung out a nail, and at each crack I started as if I had been struck. The moon was shining brightly, but it was much colder; the thermometer already marked 20 degrees below zero.

Suddenly there came, clear and sharp, the savage howling of a pack of wolves; it seemed at the very door. I jumped out of my chair, I was so startled, and stood, I think, a most disgraceful picture of a coward. Kaiser rose up on his three sound legs and began to growl. At last I got courage to go to the window and peep out, with my teeth fairly chattering. I could see them up the street, all in a bunch, and offering a fine shot, but I was too frightened to shoot. After a while they went off, and it was still again. I wondered which was worse, their savage wailing or the awful stillness which made the ticking of the clock seem like the blows of a hammer. I wished that there might come another blizzard.

But at last I got so I could walk the floor, and as I went back and forth I managed to look at things a little more calmly. The first thing I decided on was that I must no longer, in good weather at least, sleep in the hotel. It was easy to see, if the robbers came in the night and found nobody in the other houses, that they would come straight to the hotel. I made up my mind to take my bed to some empty house where they would be little likely to look for any one, or where they would not be apt to look until after I had had warning of their coming.

Another thing which I decided on was that I must keep up two or three more fires and get up early every morning to start them. I saw, too, that I ought to distribute the Winchesters more, and board up the windows of the bank, and perhaps some of the other buildings, leaving loopholes out of which to shoot. Still another point I thought of was this: Suppose the whole town should be burned? I wondered if I could not find or make some place where I would be safe and would not have to expose myself to the robbers if they stayed while the fire burned, as they probably would. I thought of the cellars, but it did not seem that I could make one of them do in any way.

My fright was, after all, a good thing, because it made me think of all possible dangers, and consequently, as it seemed, ways to meet them. It was at this time that the idea of a tunnel under the snow across the street from the hotel to the bank occurred to me, but I was not sure about this. Still, some way to cross the street without being seen kept running in my mind. In short, I walked and thought myself into a much better state of mind, and, though I still started at every sound, I was no longer too frightened to control myself.

When it came bedtime I decided to follow out my plan for sleeping away from the hotel without delay. There was an empty store building to the north of the hotel. It was new and had never been occupied. I had often noticed that one of the second-story windows on the side was directly opposite one in the hotel, and not over four feet away. I carried up the ironing board from the kitchen, opened the hotel window, put the board over for a bridge, stepped across and entered the vacant building.

I thought I had never seen a place quite so cold before, but I carried over the mattress from my bed, together with several blankets, and placed them in a small back room in the second story. The doors and windows of the first story were all nailed and boarded up, and it seemed about the last place that you would expect to find any one sleeping. I left the dog and cat in the hotel, took one of the rifles with me, and pulled in my drawbridge. I almost dropped it as I did so, for at that instant the wolves set up another unearthly howling. I got into bed as quick as I could. They went the length of the street with their horrible noise, and then I heard them scratching at the doors and windows of the barn. I could have shot them easily in the bright moonlight, but I remember that I didn't do so.

(To be continued.)

Bits of Fun for Everyone

A Rude Comparison.

A fashionable woman who, to save expenses collected her own rents, found one of her tenants in bad humor. She thought it wise to forestall his complaints by making one or two herself.

"And the kitchen, Mr. Holt," she said, "is in a terrible condition."

"Yes, ma'am, it is," agreed Mr. Holt, "an' you'd look the same way if you hadn't had any paint on you for six years."—Boston Transcript.

Proper Thing.

"I am nearly broke and want some collars."

"Ah! Then you want the kind with just a slight roll."—Public Ledger.

According to the Custom.

First Guest—I wonder if the bride's outfit is all right. You know, she should have "something old and something new; something borrowed, something blue."

Lady Guest—She has 'em. The gown is new, but the style's old. It's bought with borrowed money, and her father's the bluest thing present.—Judge.

Latest High Class Patterns for the Home

Please order the patterns you desire at least two or three weeks before you wish to use them. Desiring to obtain the latest high-class patterns for its readers, THE FARMER has made arrangements to have them sent direct from the east, and under present mailing conditions it takes about that time for them to reach you.

3832. Girl's dress. Cut in four sizes: 8, 10, 12 and 14 years. A 12-year size will require 2 7-8 yards of material 36 inches wide. Price 10 cents.

3822-3795-3838. A good utility costume. The "knickers and blouse" 3822, cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. There's Magic, in

Red Cross Ball Blue

A hundred years ago, the magic, dazzling whiteness it gives to the coarsest as well as most delicate fabrics would have caused its user to be hailed as a witch. To-day she is the envy of her neighbors, at much less labor to herself. Makes clothes beautiful.
Buy it—try it—and you'll stick to it.

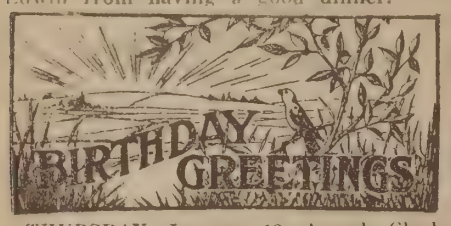
WONDERFUL CONFIDENCE

Many charged with the care of children, turn instinctively to

SCOTT'S EMULSION

as a dependable means of sustaining growth and vitality. You could not do better than profit by this confidence.

Scott & Bowne Bloomfield, N.J. 20-52



In writing advertisers, be sure to say you saw their advertisement in The Washington Farmer.

Esther Burke waited a long time before she wrote to us this time. She goes to the Summer Vale school and is in the sixth grade. She likes it. Esther is 11 years old. Her birthday is February 26. She lives in eastern Washington, near the Idaho boundary line. Esther is always glad to get The Junior Farmer.

May Brown hopes the cousins and Aunt Nellie had a Merry Christmas. She has four sisters and four brothers and they live near the Spokane river, in northeastern Washington. May is in the third grade at school and has a fine teacher. For pets she has a cat, four dogs and a pig.

"I had a Merry Christmas and a Happy New Year," says Edwin H. Foster of south central Washington. While Edwin was on his way to town in an automobile to eat his New Year's dinner a car bumped into his car and tore one of the rear fenders off and bent the hub, but that didn't keep Edwin from having a good dinner.

THURSDAY, January 12—Joseph Clark, 11 years old; Selma Schulberg, 11

FRIDAY, January 13—Rena Heathers, 8 years old; Clyde Seelen, 11.

SATURDAY, January 14—Harriet Moore; Alma West, 10 years.

MONDAY, January 16—Ethel Boie, 11 years old; Byron Henry, 7; Louise Litt, 11.

TUESDAY, January 17—Edithmay Lindsley, 10 years old; Mary Towne, 11; Bernice Williams, 10.

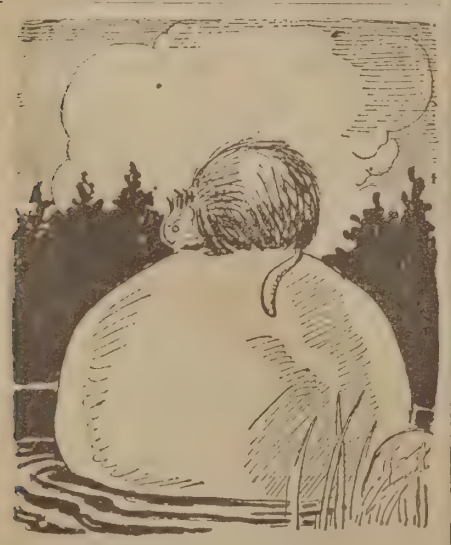
WEDNESDAY, January 18—Leona Goodno, 9 years old.

In each issue a list of the cousins' birthdays for the week will be published. At the close of each letter you write be sure to tell how old you are and when your birthday comes.

LETTERS WELCOMED BY AUNT NELLIE.

Among recent letters received by Aunt Nellie are those from cousins whose names follow. A few of these letters will be published each week in the regular edition of The Farmer, and others will appear from time to time in The Junior Farmer:

Hulda and Zeita Wood, Geraldean Ward, Juanita Porter, Melvin Hendrickson, Madoline Hays, Maria K. Runolfson, Viola Triplett, Ruth Hansen, Hazel Toulon, Irene Wilson, Robert Afton Stevens, Freda Steiner, Carl Schmick, Thelma Melger, Harold A. Stevens, Dorothy Tiff, Jennie Gibbs, Dorothy Loomis, Vernice Maurer, Lola Hollenshead, Bernice Reynolds, Agnes Maurer, Joyce McDonald, Mayme Kruse.



BEDTIME STORIES

By THORTON W. BURGESS.

Copyright, 1919. T. W. B.

LAUGH AT JERRY MUSKRAT.

Jerry Muskrat sat on the Big Rock in the Smiling Pool. Jerry Muskrat was very thoughtful. He paid no attention to Little Joe Otter, who was having a beautiful time on his slippery slide. He paid no attention to Billy Mink, who was fishing in the Laughing Brook just where it joins

Jerry Muskrat was very thoughtful.

the Smiling Pool. He paid no attention to Grandfather Frog, who was sitting on his big green lilypad watching for foolish green flies. Jerry Muskrat paid no attention to any one; he just sat and thought and thought and thought.

Little Joe Otter swam over. "Wake up, Jerry Muskrat!" shouted Little Joe Otter, splashing the water up in Jerry Muskrat's face.

Jerry shook the water off and made a face at Little Joe Otter. Then he climbed a little farther up on the Big Rock and once more began to think and think and think. By and by he hopped to his feet, smoothed out his brown coat and walked over the edbe of the Big Rock.

"I believe I'll begin right away," said Jerry Muskrat aloud, as he prepared to dive into the Smiling Pool.

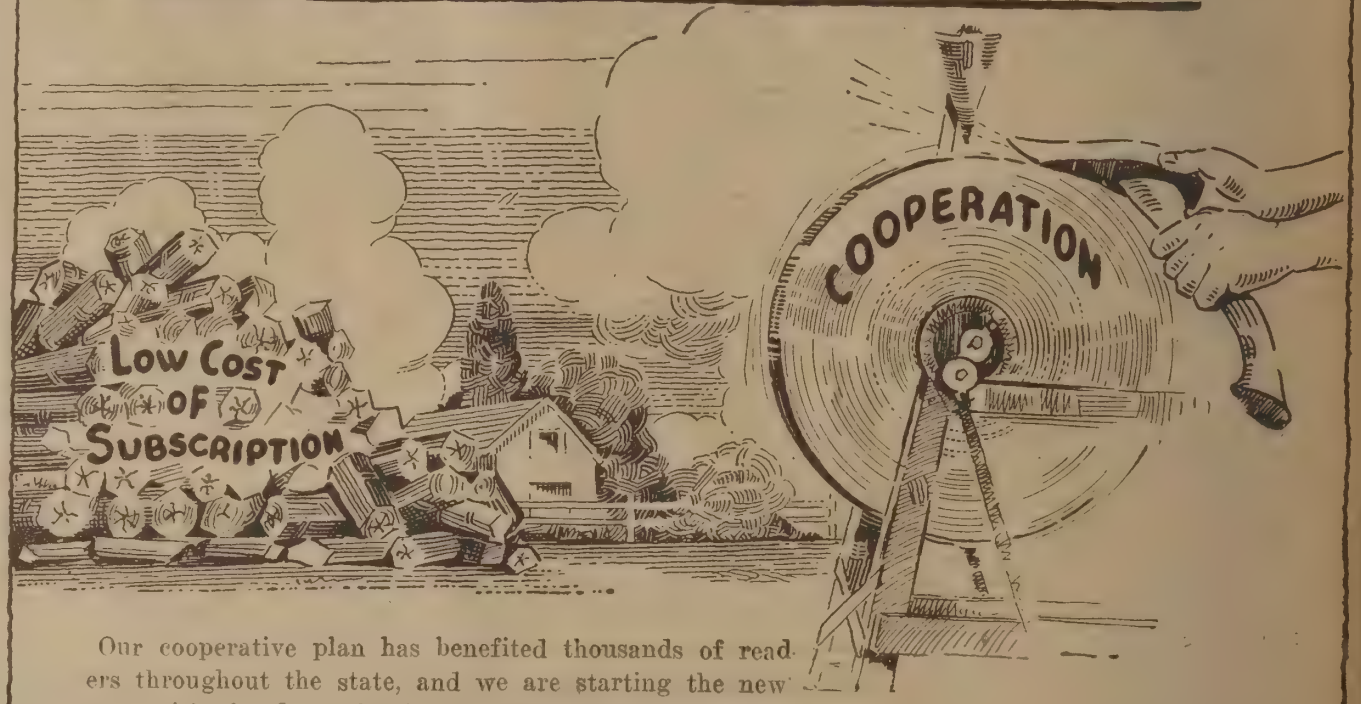
"Begin what?" asked Billy Mink, who happened to be near enough to hear.

"My new house for the winter," replied Jerry Muskrat.

Billy Mink stared at him. "Winter is a long, long way off," said Billy Mink. "What do you want to begin your house now for? You're foolish, Jerry Muskrat; you're foolish. Come on, have some fun!"

Jerry Muskrat shook his head. "It's going to be a long, hard, cold, cold winter, and I want to be ready for it early. Then I'll come and play."

Billy Mink looked hard at Jerry Muskrat to see if he really meant what he said. Jerry looked so sober and earnest that Billy Mink just had to believe Jerry meant every word. Then Billy began to laugh. He called Little Joe Otter over and told him what Jerry Muskrat had said. Then Little Joe Otter began to laugh, too. Here is was beautiful warm weather and winter a long, long way off, yet Jerry Muskrat pretended to know what kind of a winter it would be and to talk of getting ready for it now. What could Jerry know about it? Jerry must be crazy. So they laughed at him and made fun of him. They told the Merry Little Breezes, who told Spotty the Turtle and Mrs. Turtle and Mrs. Redwing and Sammy Jay and Blacky the Crow and Grandfather Frog.



Jerry's crazy as a loon!
Pretty soon he'll want the moon,
when the sun is shining bright
Jerry thinks it's almost night.
See him shiver in the sun,
Thinks that winter has begun.
Jerry's crazy as a loon!
Pretty soon he'll want the moon.

So sang Billy Mink, and then everybody laughed at Jerry Muskrat, everybody but Grandfather Frog.

"Chugarum!" exclaimed Grandfather Frog. "If Jerry Muskrat says we are to have a cold winter we surely will have a cold winter. Jerry Muskrat knows."

Jerry Muskrat looked over at Grandfather Frog and smiled.

LEND A HAND TO COOPERATION

Our cooperative plan has benefited thousands of readers throughout the state, and we are starting the new year with the determination to make 1922 the biggest year yet for this plan. In order to do this we ask each and every one of you to lend a hand. The tools won't stay sharp unless we all take a turn at the grindstone. What we did last year doesn't help if the axe is dull this year. We have to pour a little more water on the wheel and go to it again.

So we repeat, send your subscription orders direct. Get your neighbors to do the same. We will give you and your neighbors the benefit of every penny which would ordinarily go to the agent handling the subscription.

We have every confidence that you will continue to cooperate and repeat our request that you take thought as to your subscription renewal. Instead of waiting for a notification, mail in your order at least 60 days in advance of the address label of your paper. Tell your friends and neighbors about our cooperative plan and include their orders with your own. By all pulling together we can and will make 1922 a record year for cooperation. Let's do it!

Subscription Rates of The Washington Farmer:

$1.00 for Five Years 25 Cents for 1 Year.
50 Cents for 3 Years.
In Canada add 1 cent a copy for extra postage.

Jan. 12, 1922.

Scrub Bull Stands Convicted Again

By H. E. M'NATT,
Western Washington Experiment Station.

During the summer of 1920 the animal husbandry department of the University of British Columbia conducted a dairy farm in three milk producing districts of the province.

The purpose of the survey was to determine the factors governing profit and loss on dairy farms as they are operated in British Columbia. The findings of the British Columbia men apply very pertinently to western Washington dairy farms.

The investigation shows quite conclusively that the labor income of each farm, aside from seasonal effects, is almost entirely dependent upon the good judgment and modern methods employed. The labor income is the difference between the total receipts and total expenses of the farm. This is what the farmer receives in return for the time and labor invested. The following table is selected from the report of the British Columbia survey.

The following table speaks very plainly about the value of using only purebred sires. As soon as the dairyman begins using purebred sires, instead of grades, that soon does his labor income begin to climb rapidly. And the longer he continues to use purebred sires the higher his labor income grows.

The Labor Income as Affected by the Purebred Sire.

Kind of sire and number of years in use on the farm.	Number of farms.	Average number of years of purebred sire was in use.	Labor income.
Grade sire	11	...	Loss $ 41.95
Purebred sire, 1 to 5 years	20	3.2	Profit 216.04
Purebred sire, 6 to 10 years	11	7.6	Profit 495.85
Purebred sire, 11 years and over 6	6	16.5	Profit 550.36

TO GRADE UP DAIRY ANIMALS.

Although not strictly a dairy community, the farmers of Harstine island, Mason county, have decided to keep purebred sires in order to grade up the dairy animals of the island. At a meeting of the community members recently they voted to buy a purebred Jersey bull to replace ay grade sires in the neighborhood.

With the asistance of H. E. Drew, the county agent, the committee was able to secure a registered bull calf from a nearby breeder, the money having been raised by popular subscription. The animal is sired by Prosser Pogis, a full brother to Sophia's Agnes and out of Sultana's Pogis Blossom. The bull will be kept at a central farm and used as a herd sire for all herds on the island.

The majority of the farmers on the island are not dairymen, but raise poultry and berries as a main crop, while each man keeps from one to three cows for family use and sells what butterfat he can spare.

NEW BERKSHIRE HERD SIRE.

F. M. Curtiss of Fruitland, Wash., recently purchased from Dean C. F. Curtiss of the Iowa State college the yearling Berkshire boar, Ames Laurel 2d. This young boar is a very fine individual, with broad head, stretch, good bone, high arched back and approved big type. He is sired by Ames Rival 139th, son of Rival's Champion's Best, the sire of Laurel Champion, the most famous Berkshire boar ever in the northwest. The dam of Mr. Curtiss' boar is Winona Laurel, a granddaughter of Laurel Champion. Most of Mr. Curtiss' sows are of Matchless Lee blood. Mr. Curtiss, it will be remembered, is the breeder of Lord Bacon 9th, the boar that brought fame to the state of Washington and the northwest by winning grand championships at the Chicago International in 1920, an honor never before captured by a northwest bred hog of any breed. He was shown by Dean Curtiss, who purchased him from F. W. Curtiss, and is bred considerably along the same lines as the young boar.

ORGANIZE GUERNSEY CLUB.

The dairymen of the East Sound community are organizing a Guernsey club for the purpose of securing the purebred Guernsey bull owned by Mr. Donehue. The Oreas Island Guernsey club at Olga and Alfred Nelson of West Sound each have one good bull. They expect to exchange the three animals among the three communities on an even basis, since they are estimated to be of approximately the same value and owned in the county for three years. By this arrangement the three communities will get at least six years' service from purebred bulls, while they will only pay out the price of one bull. It will prevent any bull having to go to the block before his value is known. If any offspring prove to be of exceptional value the bulls will still be in the county.

MAKES GOOD AVERAGE.

John P. Martin of Satsop, Wash., has 12 official records completed by his Jersey cows during the last year. Two of the best, age considered, were made by senior yearlings. Amy's Lass, one of them, has to her credit 412.3 pounds of fat for the year, and Amateur's Lass, 412.6 pounds. Buff Lassie, as a 2-year-old, produced 461.59 pounds of fat. The average age of the 12 head is 2 years and 130 days at beginning of test, and the average production is a little over 408 pounds of fat. Mr. Martin's herd is mostly line bred Gertie of Glynllyn, with an Island cross. Both Mr. Martin and John H. Taylor of Montesano, Wash., have recently received letters telling of the good production being made by heifers sold to parties in the Colville valley a year ago last April.

MUST HAVE PLENTY OF LIGHT.

The barn that does not provide plenty of light is just to that extent an inferior one.

BEEF ON WEST SIDE.

It is the belief of G. R. Kinney, manager of the Northwood Farms at Redmond, Wash., that the cut-over lands in the lumber regions near the coast could be used to excellent advantage for ranging beef cattle. Mr. Kinney was in charge of the Bratnober company's herd of Milking Shorthorns on the fall and winter show circuit. The herd was brought to Washington on the first of October, 1920. Mr. Kinney says that cattle they do not care to sell for breeders are turned on the hills and make beef at a very small cost. The Bratnober company has a big lumber business and many acres of this cut-over land.

River Banks Better Berkshires
won 96 prizes
at the leading coast fairs this fall.
RIVER BANKS FARMS, Grants Pass, Ore.

Pay for Berkshires in Pork.
Improve your stock. You get the breeding hog now; pay when you get the pork. Write for plan.
F. M. CURTISS. Fruitland Wash.

BIG TYPE POLANDS
Bred gilts, Feb., March farrow; bred to K's Big Bob, Designer's Model and Smooth Giant. $30 and $45, papers.
B. F. KAMMERZELL & SONS,
R. 5, COLFAX, WASH.

Poland China Boars and Gilts
Spring gilts and boars, both big and medium type, good individual, good breeding. Priced for quick sale.
GRANT GLEASON, Chehalis, Wash.

Paramount
The sensational Grand Champion Boar of Idaho and the sire of the Grand Champion Boar at the Southeastern Idaho fair, 1921.
Wonder Timm
Grand Champion Boar of Idaho, 1919, a real giantess-bred boar and sire of the first senior yearling sow of the 1921 Pacific International.
These boars have been mated to, or are sires of, 40 sows and gilts that will be sold
Tuesday, January 31, 1922
at the farm, near Nampa, Idaho.
Every sow or gilt in the offering will be out of Paramount or bred to him—the boar whose get won every blue ribbon but two that they showed for in four shows in Idaho, in 1921, winning 42 blue ribbons, 8 champions and 1 grand champion; and our herd won every blue ribbon but four in four shows and every champion but two.
This is a record of which we are proud. Our fall gilts weigh up to 600 pounds and our spring gilts up to 400 pounds, the kind that grows big and raises big litters.
Will Sell Paramount
As an added attraction we will sell Paramount, Idaho's greatest Poland-China boar, at this sale. He will be a great addition to any Poland-China herd in America.
Get your name on our mailing list. Catalogues now ready for mailing.

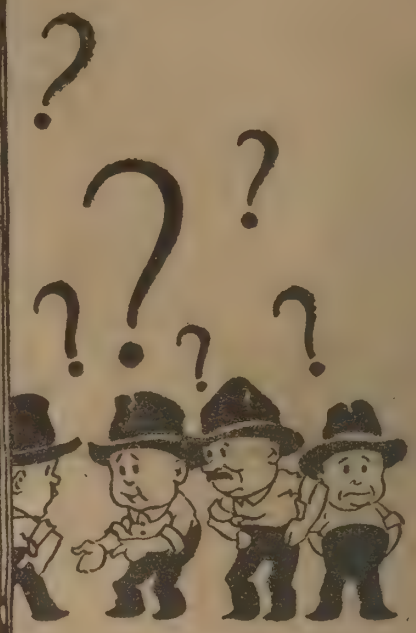
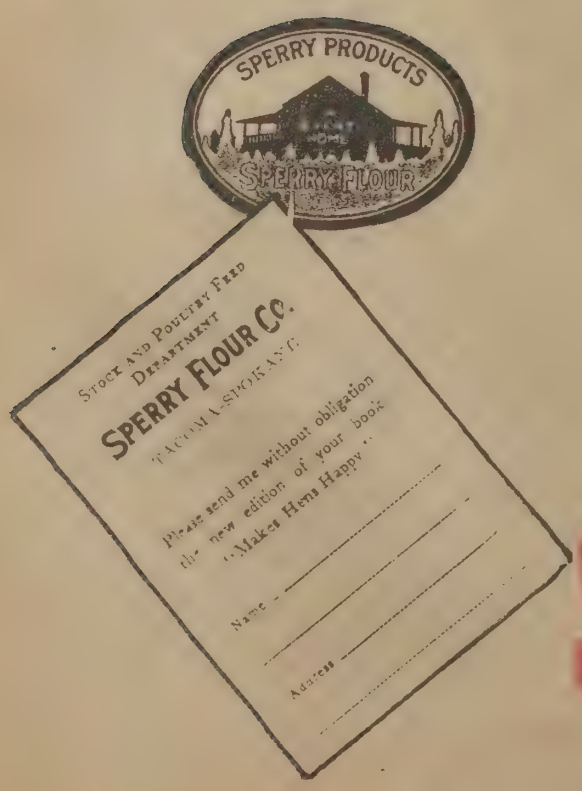
EXPERIMENT STATION
URBANA ILL



Do you know—

—three simple tests for proving a hen a good layer?
—the best months in which to cull the poor layers?
—how to pen-fatten birds for market?
—what are the feed requirements of the laying hen?
—the correct proportion of grain and mash to be fed to adult laying stock for maximum production?

These are but a few of the egg-making, money-making questions answered in the new and enlarged edition of "Makes Hens Happy." It is free— send for your copy today.



Get this 38 page guide-book to bigger poultry profits

Here is by far the most complete and helpful handbook we have ever issued on poultry husbandry. No half-fed, half-baked "theories" find place in this book. It is the outgrowth of many years of observation and practical experience in making hens happy and profitable.

The results of State and Government poultry stations; the work carried on by our feed specialists and at our own Experimental Farm; the practical, hard-pan experience of thousands of successful poultrymen up and down the Pacific Coast—all this is summed up and boiled down in this compact 38-page book. Even such subjects as breeding, housing, artificial lighting, the care of the flock during moulting, etc., are discussed.

No poultryman—regardless how "seasoned" he may be—can afford to pass up this guide-book to bigger poultry-profits. We would like every poultryman—whether or not he uses Sperry Feeds—to benefit by the information and helpful advice contained in this book.

That's why we urge you to send for your copy at once. No telling how long the edition will last. The sure way is to get your request in the mail without delay. Don't bother to write a letter—simply clip the coupon, fill out and mail today.

SURELAY

"A Sperry Product"

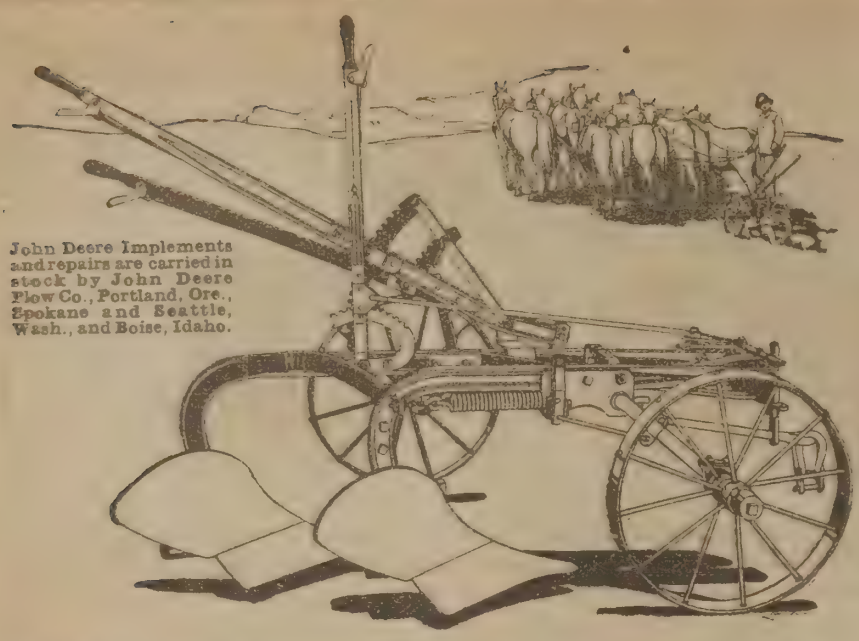
THE WASHINGTON FARMER
ESTABLISHED 1894
SPOKANE. SEATTLE.

Ordinary Scrub Sires
Mean:

Smaller Bank Balances,
Poorer Home and Community Life,
Rundown Buildings and Equipment,
Boys and Girls Leaving for the City.

Good Purebred Sires
Mean:

Bigger Bank Balances,
More Productive Farms,
Better Buildings and Equipment.
Boys and Girls Remain on the Farm.



AS stated in last week's issue of The Washington Farmer, a concerted movement is now under way looking toward the elimination of the scrub sire from the farms of this state. The movement is not a new one, though it is just now being promoted with a vigor and system that should make the scrub an applicant for a pedestal in the public museum of has beens in the near future. The picture on this page illustrates the way the battle against "the most expensive sire in the world" has been gaining momentum. C. M. Hubbard, live stock extension specialist of the state college, saw to it that there was a pair of scrub steers from scrub sires on exhibition at the Western Royal last November alongside a pair of good steers, the offspring of grade cows and purebred sires. In the picture the scrubs occupy the place of prominence in the foreground, while the good steers are shown at the back. Two of the four small cards on the wall before the animals are reproduced herewith, showing what the purebred sire means compared to the scrub.

On January 6 Dr. S. B. Nelson, director of the college extension service, and Mr. Hubbard met with a group of stockmen in Spokane to lay groundwork for a renewed attack on the ranks

(Continued on page six.)

Seattle Banks Offer to Finance Bonded Wool Warehouse—Page 3

John Deere Implements and repairs are carried in stock by John Deere Plow Co., Portland, Ore., Spokane and Seattle, Wash., and Boise, Idaho.

Consider Its Long Life

The John Deere Steel Gang is made entirely of high-grade steel. No castings to break. No pipes to bend. Beams are guaranteed not to bend or break. Unusually strong bracing keeps the plows in alignment. No matter what your soil conditions are, nor how many horses are used, the John Deere Steel Gang will stand the strain and keep on doing good work.

Farm implements are your cheapest investment. The University of Missouri found the implement cost of producing a crop of corn last year to be only one-ninth the total production cost per acre. Based on this year's prices, the cost will be only one-thirteenth.

It's a handy plow—you can turn square corners without raising the plows from the ground. Easy to raise or lower bottoms — powerful springs have almost the effect of power lift. Even width of cut can be maintained, on hillsides or around curves, by means of landing lever.

Genuine John Deere bottoms of the type to suit your soil. They scour, wear long and make good seed beds. Quick detachable shares — loosen one nut to remove share; tighten the same nut and share is on tight. Two and three-bottom sizes. Seat attachment, with or without rear wheel, can be furnished if desired.

See the John Deere Steel Gang at your John Deere dealer's. Write today for a free folder describing it. Address John Deere, Moline, Illinois, and ask for free folder S L—747

JOHN DEERE

THE TRADE MARK OF QUALITY MADE FAMOUS BY GOOD IMPLEMENTS

SURPLUS WAR SUPPLIES

ATKINS SILVER STEEL SAWS

Save Time, Labor and Money

It will pay you—in cold cash—to discard a poor saw and buy an Atkins. Why waste time and material trying to get along with poor tools?

Atkins Silver Steel used in all our best saws is made by an exclusive Atkins process. It is the highest grade of saw steel that man ever devised. Takes a keen edge, stays sharp longer, needs less filing than any other to keep in shape. There is an Atkins Saw for every purpose. Circular saws, hand saws, hack saws, docking saws, meat saws, cross-cut saws, pruning saws, etc.

No matter what use you have for a saw it will pay you to know of the Atkins line—NOW! Ask your dealer—if he does not sell Atkins Saw Service—ask us.

Sent to You—FREE "The Saw on the Farm"

A new edition just off the press, containing all sorts of useful tables and suggestions for saving time and money as well as description of the complete line of Atkins Saws. Fill in your name, address and uses you have for saws, on the coupon below and we will send you a copy today. The supply is limited, so send at once.

Sent Free Land-Clearer's Guide

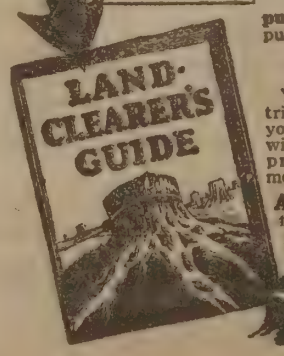
80 PAGES

This wonderful book—just out—is a real, genuine guide for land clearers. 80 pages full of valuable first hand information, pictures and beautiful colored illustrations. Explains all the best modern methods. Tells when each method should be used to get best results. You may have a copy free. Just send your name—no obligation.

Write Today
Send now for Land Clearer's Guide. Learn how to cut cost of clearing in half. Ask for special low Demonstrator prices on Kirstin Pullers. Only one Demonstrator to each locality. Send today.

Kirstin One-Man STUMP PULLER

One Man Clears Land Alone. No expensive extra help needed—you can pull the big ones alone. Kirstin One-Man Stump Puller works on wonderful patented leverage principle. A few pounds pull on the lever means tons pull on the stump—it's portable—easy to handle yourself. You alone with a Kirstin can turn your no-profit, tax-eating stump land into more bushels, more income, in your spare time.



The Kirstin line is complete. A model for every job and every purse. Eleven models to choose from. One-man and horse power pullers—all sizes—no job is too small or too big.

30 Days' Trial

You take no risk—30 days' trial protects you. Try it in your own stump field 30 days without sending us a penny—prove without risk what a money saver it is.

Send No Money

Clear your land quickly—easily—cheaply—without danger by using a Kirstin Stump Puller. Pay as you clear! Small monthly payments brings you Big Yearly returns. A few pennies a day pays for your Kirstin.

Bonded Warehouse for Wool at Seattle

Seattle Bankers Offer East Washington Wool Growers $2,500,000 to Finance the Project

By HORACE ADDIS.

Opening with a large attendance, which continued through all its sessions, the Washington Wool Growers' association, at its annual convention at Yakima January 13 and 14 held one of the most successful meetings in its history. It went on record for an increased tariff on wool and made clear cut declarations on other important matters of legislation.

After listening to the offer of Seattle business interests to provide a bonded warehouse which would furnish facilities for handling and storing 5,000,000 pounds of wool and provide for an advance on the wool after it is in the warehouse, with the provision, first that a $100,000 corporation be organized by the wool men themselves to secure loans from the war finance corporation, it appointed a committee to organize the corporation and to negotiate with the Seattle men.

Wages of herders and prices for shearing were worked almost harmoniously with the forest service in the matter of grazing permits. It listened to a number of able addresses, including one by Assistant District Forester E. N. Kavanagh; Fred Faulkner, representing the Western Wool Warehouse at Portland, Ore.; R. A. Ward, manager of the Oregon wool and mohair pool, and A. J. Knollin of the wool growers' cooperative commission company. And its sessions were closed with a most enjoyable banquet at the Commercial hotel of Yakima.

BONDED WAREHOUSE PROPOSITION.

With President T. J. Drumheller and Secretary R. D. Sears in their places, after the reading of the minutes and the appointing of committees, the president announced the presence of a number of business men from Seattle, with the bonded warehouse proposition. While waiting for the report of the committee appointed to confer with them Secretary Sears explained the working of the war finance corporation, for the loaning of money to stockmen, and how a $100,000 corporation could be organized and secure loans up to $800,000. His remarks provoked many questions and discussion was participated in by a number of the members present. It was brought out that partial payments can be made on loans at any interest paying period; that they must all be paid in full within three years from next June, when the war finance corporation automatically goes out of existence, but that if the stockmen use the corporation in the securing of many loans and its discontinuance seems necessary, some provision for continuing the granting of loans is almost sure to be made.

The committee of Seattle business men making the bonded warehouse offer and to finance the project to the extent of $2,500,000 were Joseph A. Swalwell, president of the Union National bank, and F. H. Luce, vice president of the National Bank of Commerce of Seattle. The Seattle committee also included Major Muirhead of the Port of Seattle; Mr. Gooderham, traffic manager for Frye & Co.; Messrs. Watson and Springer of the Admiral line of steamers; Mr. Collins of the Elder Steamship company and Thomas Hill, formerly editor of the Yakima Herald and now director of the state development bureau, under the auspices of the Seattle Chamber of Commerce. The committee appointed to confer with them consisted of H. Stanley Coffin, Archie Pryor, Everett Butler, T. H. Smith and Ellis Reagan, Yakima; John Smithson and Edward Mudd, Ellensburg; A. D. Dunn, Wapato; F. M. Rothrock and Peter McGreggor, Spokane; E. F. Benson, Tacoma; Charles Fales, Pasco; A. C. Fleming, Sunnyside, and A. R. Bohosky, Portland, Ore.

One big textile industry employing thousands of men is already considering plans for building a factory on Elliott bay, in view of the proposal to assemble the clip of all eastern Washington wool in Seattle, Mr. Luce said.

WAR FINANCE CORPORATION.

The resolution, as finally presented to the convention by the committee of wool men, reads: "We recommend the formation of a corporation with a capital of $100,000, to obtain funds from the war finance corporation for the purpose of financing the sheep industry; and we further recommend that the board of directors of this corporation be instructed to enter into negotiations with Seattle representatives for the establishment of a plant for the marketing of our wool."

Stanley Coffin, chairman of the committee, said the finance corporation is the first object to be accomplished, then a central marketing point, preferably Seattle. Wool should be sent to a point where it can be graded by government graders and a standard value be given it. This is a Washington industry, we are Washington men and he thought Seattle the proper place for a wool warehouse.

Mr. Swallwell, head of the Seattle delegation, said Seattle has the money; it is ready to make all necessary advances on wool; it is the best port, and he believed it to the interest of the wool men to see that a warehouse is established.

Major Muirhead told how Seattle had bonded itself for ten millions and eight and a half millions invested in terminals; that 48 steamship lines operate out of the port and that it is able and willing to help the wool men.

Mr. Hill said Seattle will grow as it serves the surrounding country; that it can serve the wool men to their advantage, as well as to the advantage of Seattle.

CLAIMS OF PORTLAND.

F. M. Rothrock said Portland had already a well-established bonded wool warehouse. There is but one great wool port in the east; that is Boston. He believed there would be but one in the west and that will be Portland. Mr. Olney of the Citizen's Bank of Wapato indorsed Mr. Rothrock's views. He gave Portland credit for what it had already done.

A number of others spoke in favor of the resolution, including Mr. Benson and Archie Pryor. It was finally passed, with no opposition.

The committee on predatory animals and sheep diseases reported that regulations are satisfactory, but recommended that no sheep be loaded without disinfecting the car, and this should be done without extra charge. Some special effort should be made to overcome the menace of rabies in coyotes.

The president said jackrabbits are a worse menace than coyotes. Dr. Glen R. Bach said the government is working on the jackrabbit problem and that thousands are being poisoned. He said 990 predatory animals had been killed in his district and 544 in another district within the last season.

Dr. Nelson, head of the extension service of the W. S. C., told of the ravages of jackrabbits. He said the college wants to help farmers and stockmen in the fight on the pests and told of some things that have been done. Appropriations are needed for this work.

Some discussion was had regarding Senator Jones' bill creating Yakima national park on Mount Adams, and of the truth in fabric bill. It showed sentiment unanimous against the first and for the latter bill.

FOREST RESERVE CONDITIONS.

At the evening session E. N. Kavanagh, assistant district forester, of Portland, Ore., addressed the convention. He said the financial situation has strengthened to a degree that warrants being optomistic. There is a shortage of sheep in Australia, Argentina and New Zealand. There is now a surplus of wool, but as European markets revive, that surplus will rapidly melt. The situation in congress is favorable.

Mr. Kavanagh referred to the law which had granted extension of time for the payment of grazing fees, which extension expired December 31. He said that in Oregon and Washington probably not over 10 per cent is unpaid. He said only in those cases where bad faith was shown would the law be invoked, which provides for cancellation and trespass charges. He wants the men to stay on the forest who have been using them year after year. Through cooperation he expects less friction between sheep herders and those who use spots in the forest for recreation. They are planning for a driveway down the west side, on the Snoqualmie, as there are ranges which will accommodate 20,000 to 25,000 sheep, though now inaccessible. He is expecting to arrange for some cut-over lands in western Washington and Oregon. Inside of a year he will have some interesting information. He explained the feeling in the corn belt which had led up to the bill for range appraisements—a plan which really headed off increased fees. He expects the results to be fair and representative. It will set up new conditions. Ranges close to railroads and water will be worth more than those far away, which take a hard drive to reach. It will get away from the blanket price for ranges.

President Drumheller said the good fellowship which had grown up between the government and the sheepmen was largely due to Mr. Kavanagh's reasonable, friendly spirit. He thanked him for this and for his address, a sentiment which was received with cheers. Several of the forest supervisors were called on and spoke briefly.

LAMB FEEDING EXPERIMENTS.

M. Bean, in charge of the W. S. C., experiment farm at Prosser, Wash., told of the work done there, where 1700 lambs are being fed. The lambs are divided into bands of 50 each. Different cuttings of alfalfa and of sweet clover are fed. Different qualities of grain are fed, with hay; also corn, hay and silage, and the results carefully checked. There is a temporary and permanent investment of about $7500.

Professor Hackedorn, head of the animal husbandry department of the college, invited the wool growers to attend, at a date in February, to be announced.

Saturday forenoon was devoted to meeting with the different forest supervisors and arranging for permits for grazing.

At the Saturday afternoon session the president announced as the committee on the wool growers' $100,000 corporation H. Stanley Coffin and Archie Pryor, Yakima; Charles Anderson, Ellensburg; A. D. Dunn, Wapato, and A. C. Fleming, Sunnyside. They reported considerable of the amount subscribed before night.

The committee on wages recommended $50 as the maximum and that each flockmaster use his own judgment as to wages of foreman and inexperienced help, which recommendation was adopted.

The shearing committee reported and, after some discussion, a motion to make 10 cents the maximum and 8 cents the minimum for both hand and machine shearing was carried.

YAKIMA BANKERS FAVORABLE.

At this time expressions were given by the bankers of Yakima as to their feeling toward the idea of forming the $100,000 wool growers' corporation for securing the money from the war finance corporation. Every one of them spoke favorable.

The resolutions committee then made its report. Every resolution offered received unanimous indorsement except the one asking for the restoration of games of chance at the state and other fairs, under the plea that blankets manufactured in Washington could thus be disposed of. With such men as Frank Rothrock, E. F. Benson, E. C. Burlingame and others opposing it, it was voted down almost unanimously.

L. D. H. Weld, representing Swift & Co. of Chicago, told how the great packing plants steady and stablize the live stock markets. He urged publicity for the slogan, "Eat more lamb," and said Swift & Co. are giving it wide publicity.

WOOL MARKETING COMPLICATED.

Fred Faulkner of Pendleton, Ore., representing the wool warehouse at Portland, Ore., spoke. He said the marketing of wool is more complicated than the marketing of the lamb crop. He said wool pools are an improvement over the old marketing system. Speaking of the Portland warehouse, he said, being bonded it gives absolute protection to the wool stored. The receipt can be used as collateral and borrowed on. Either the warehouse or bank will loan money on them. A pool, to be successful, he said, must have facilities for storing and grading. He told of the storage facilities and of the fine dock at St. Johns, close to the business district of Portland, and declared the Portland

(Continued on page six.)

Resolutions adopted at the Washington Wool Growers' association:

Demand the early enactment of a permanent tariff law, with a tariff on wool of 33 cents a pound, clean content, American valuation, with a compensatory tariff for American manufacturers;

Urge such reduction in wages and change in rules and hours of railroad labor as will allow lower freight rates;

Urge on the federal and state government a policy of license and regulation of trucks and passenger busses, which will put them on a par with the railroads in the carrying of passengers and freight;

Protest the restitution of higher railroad rates on live stock which prevailed before the present reduction went into effect, which expires in June, and ask special rates to grazing grounds, and a further reduction in general live stock rates if possible;

Request congress to amend and enlarge the federal reserve banking law to give farmers and stockmen renewal of their yearly notes;

Pledge support to the Capper "truth in fabric" bill and urge its enactment by congress;

Commend A. J. Knollin in his management of the Wool Growers' Commission company and recommend members of this association and wool growers generally to patronize and make it our strongest marketing agency;

Urge the discontinuance of shipping to live stock exchanges at all markets until they rescind their rule of not dealing with outsiders

Oppose the establishment of the so-called Yakima national park, or the creation of any new national parks, for the reasons that tourists can be served as well in the playgrounds established by the forest service and these parks are inimical to the best interests of the wool growers;

Because the forest service is fundamentally agricultural and comes directly in contact with agriculture, protests the transfer of the forest service from the agricultural to the interior department;

Oppose the transfer of the bureau of markets from the agricultural to the interior department, for the same reasons and the further reason that it has worked in harmony and has done good work where it is;

Ask congress to refrain from creating new national parks where they will interfere with grazing and ask that grazing be allowed in those parks already established;

Petition the legislature to pass a law which will tax sheep only for the portion of the year in which they are in the state and ask the states of Montana and Idaho to pass similar laws;

Commend the work of Assistant District Forester E. N. Kavanagh and his assistants, assure him of their appreciation and assert that he has done more than any other one agency to bring about good feeling and perfect understanding between the government and the sheep men;

Because it helps the mutton market and reduces excessive freight rates, commend Swift & Co. for killing lambs at Portland for shipment east, and express regret at the unwillingness of Armour & Co. to adopt the same policy at their Spokane plant;

As the United States biological survey has done splendid work in the destruction of predatory animals, they commend and indorse the work of the survey and ask larger appropriations for the work; appropriations for jack rabbit extermination, in which the extension service of the Washington State college should assist, were asked also;

Urges reduction instead of increase in the fees for grazing on Indian reservations, and insists that no bonds be required;

Urges on congress the enactment of a duty of five cents a pound on all mutton;

Favors such legislation as will allow the packers to own and manage retail markets, or check the present profiteering of the retailers;

Instruct the secretary to send a copy of these resolutions to our senators and members of congress.

A resolution favoring games of chance at the state and other fairs, with the excuse that blankets manufactured in Washington could thus be disposed of, was voted down almost unanimously.

Entered as second-class matter, January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879.

GUARANTEE OF ADVERTISEMENTS

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible bankrupts. Complaints must be sent to us within 30 days from the date of the transaction and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of diseases in stock sold through these columns.

Ask and Ye Shall Receive

Write to the state college for information on any subject concerning the management of your farm. The college people have the information or will gladly get it for you.

See That Brooders Are Ventilated

The wide margin of difference in the percentage of eggs hatched about the state is due to two distinct causes, according to W. D. Buchanan, poultry specialist at the State College.

The first cause is the prevalence of disease in the parent stock, the second cause is a lack of vigor.

There is, however, a factor which seems to cause a greater loss than either of these causes, which is the lack of ventilation in the brooder. Much of this is due to overheating and improper attention. It should be a simple matter to bring down the percentage of loss from this cause.

The Pursuit of Peace

The State College of Washington is using some old war machinery, originally built for the manufacture of ammunition and engines of destruction, for making tractor, gas engine and automobile parts. A large number of pieces of heavy machinery, secured from the war department, are being converted into machines for regular use in the engineering classes and the short courses. A machine that once made small shells is now operated to make bolts and screws for auto repairs. A lathe, once used in the manufacture of 10-inch shells, will henceforth be used in truing up and overhauling general engine parts. It all reminds one of the scriptural prophecy that "they shall beat their swords into plowshares and their spears into pruning hooks."

A Board of Trade Inconsistency

The movement for the cooperative marketing of grain is down and out. We know, because the president of the Chicago Board of Trade says so. Funeral arrangements have not been announced, however, and pending the burial the organized opposition to the cooperative movement is reported to be continuing the collection of its $250,000 fund with which to combat cooperation.

We never could see the necessity of wasting good ammunition on a corpse. If the enemies of grain growers really believed that the cooperative movement had collapsed, as they declare, they would stack arms and return home to celebrate with a little orgy of speculation.

The truth is that farmers' cooperation is about the livest thing in this country today, and this is as true of the grain growers' organizations as of any other branch of the movement. No one knows better than does the Chicago Board of Trade that cooperation is out to eliminate the evils that have existed in the old system of grain marketing. No one will be hit harder by the reformation coming in the form of cooperation. If, therefore, that board can get comfort out of the premature declaration that cooperation is dead, let us be charitable and allow it that bit of relief.

Growing Up in the Dairy Business

An unsual interest in dairy cows is reported in different parts of the state. Farmers of the Yakima valley and elsewhere are finding it possible to get money from the banks to finance them in dairying. The bankers, however, will insist that good productive cows be purchased, and steps are being taken to protect these new farmers in dairying from having inferior animals thrust upon them.

It is even being stated that cows are being taken from the ranges and sold at quite a good figure as dairy cows. The buyer passes it off to another with an added price and before the transactions are closed this range animal gets to commanding the price of a good dairy cow.

There will be an earnest endeavor to prevent this species of profiteering in boarder cows.

John L. Smith of Spokane county, a man who has had large experience with dairy cattle, declared the other day that not only must the farmers be protected from the purchase of these poor cows, but that it is inadvisable for a new beginner to commence his dairy work with registered pure-bred stock. He should begin with good grade cows and build up his herd as his experience grows.

In fact, it is the general opinion of those whose counsels are worth considering that as a new business no one should enter dairying with a large number of cows—two, three, four or possibly eight or ten should be the limit.

Similar to Bond Investment

The dairy herd which is being constructively built up by a conscientious breeder is much similar to a bond investment. It is not only important to be assured of the quality of the capital stock, but if the buyer expects to maintain a steady income from them he must not expect to keep clipping the coupons, but allow them to accumulate. If he clips them they will remain steady or perhaps depreciate in value.

It is the same with a good herd. If the owner sells the young stock to swell his purse the value of the entire herd will depreciate in value and he will be unable to breed along constructive lines. The breeder will be money ahead if he allows the calves to grow up and become new milch cows, just as coupons will accumulate if not clipped.

The Farm Bureau and Politics

The Spokane county farm bureau in its recent annual meeting went on record as opposed to partisan politics in its organization. It even went to the extent of declaring that an officer or a local leader must not, while holding such position, become a candidate for any public office or take an active public part in behalf of any political organization.

The idea is an excellent one. It has been a foundation stone of the national grange against which the storms of time have beaten without avail. The farm bureau is primarily an economic organization, with social features of value to general rural life, but it is not and must never become a political organization in the partisan sense.

Future Possibilities

The Pacific northwest is the best apple-prowing district in the world. This district includes Idaho, Oregon, Washington and a small part of Canada. It is not so much superiority of soil that makes superior fruit possible, although our soil is among the very best. It is the bright sunshine that gives color to the fruits. Besides, there is the general tendency for industries to concentrate into those sections where they are best adapted.

State Farm News

Detailed audit of the accounts of the 1921 state fair shows that the receipts from all sources amounted to $52,056.56, while the direct expenditures were $45,934.32. The total cost of holding the fair was $71,246.27. The legislative appropriation for the biennium was $40,000 and the unexpended balance when all the bills are paid will $21,990.29, which will be the sum available for putting on the 1922 state fair.

More money was paid in for general admissions this year than ever before. The attendance was the largest ever known by over 3000, and the general admissions paid at the gates exceeded those of 1920 by nearly $5000, while the expenditures of the 1921 fair fell below those of 1920 by nearly $26,000, or over $15,000, excluding expenditures for permanent improvements made in the former year. Premiums paid in 1921 exceed those in 1920 by over $3000.

* * *

Washington state shipped 23,087 cars of apples between July and December 2, according to figures announced by the federal bureau of markets. The Wenatchee district shipped 10,776 cars, Yakima district 8065, Spokane district 2374, Walla Walla district 1324 and White Salmon 548 cars.

* * *

The organization of the Kittitas County Hercules Shorthorn Baby Beef club was completed recently with 10 members, according to an announcement by County Agent W. L. Davis. Each member of the club will purchase two high-grade Shorthorn steer calves from Frank M. Rothrock of Sprague. These calves will be developed and shown as prime steers at the county fair next fall and at the Western Royal Live Stock show in Spokane next November, where substantial prizes are offered for beef club work. The following boys and girls have enrolled in the club: Jessie Woodhouse, Nora Waite, Meta Bennett, Val Bradshal, Erling Hanson, Raymond Barnhart, Walter White, William Waldron, Jr.; Eugene Wilson and Robert Kresge.

* * *

Elvin G. Wood, state extension horticulturist, conducted 22 pruning demonstrations in 24 communities in Yakima county between January 3 and 14.

* * *

Thirty-five farm project leaders will soon start work in nine different Pacific county communities, according to County Agent J. R. Beck. In conjunction with the county agent, they are lining up things for practical demonstrations of scientific farming this year. The work last year proved so popular with the farmers that the number of project lessons has swelled to 35.

Following are the communities which will carry on the work: Frances, Menlo, Willapa, Brooklyn, South Fork, South Bend, Naselle, Wallicutt and Long Beach. The program includes dairying, crops and soils, berrying, poultry, agricultural engineering and home demonstration work.

* * *

Newly elected officers of Lewis county Pomona grange are as follows:

Frank O. Miller, master; T. K. Belcher, overseer; C. W. Frase, lecturer; Mrs. C. Null, chaplain; O. C. Wisner, steward; L. Griel, assistant steward; Mrs. Groskong, secretary; W. Foster, gatekeeper. The Pomona meeting will be held next time at Silver Creek February 4.

* * *

Lewis county dairymen figuratively tightened their suspenders January 1 and made a new resolution—to resume the work of weeding out the scrub cows and star boarders by the cow-testing association route. County Agent R. G. Fowler and F. W. Kehali, assistant dairy specialist at the state college, are backing them up in the matter, and a Lewis county association will be added shortly to the list of six already active in Washington. The cost will be $2.50, plus 8 cents for each cow treated. There has been no work of this kind in Lewis county since 1917.

* * *

An old-fashioned stock sale, with which will be combined a school in stock raising, conducted by instructors from Washington State and Oregon Agricultural colleges, is being planned for some time in February by the Walla Walla County Pure Breeders' association. Both cattle and sheep will be sold, and students in agriculture from Walla Walla, Columbia and Garfield county high schools will participate in the stock judging contest.

* * *

Sheepmen who have just trailed their bands to the ranges along the Columbia river say that there has never been a better prospect for feed. Owing to the heavy rain and snow during the last two months grass has started growing and is several inches high in protected canyons. As a result they expect the sheep to come through the winter in good shape and to produce a good wool clip next spring. The estimate on sheep wintering in the Yakima valley and along the Columbia is 250,000 head.

* * *

The Washington Growers' association, composed of growers of prunes in Clarke county, and which handles the crop on a cooperative basis, recently sent out checks totaling more than $165,000 for part of the 1921 crop. The balance will be paid when the crop has been disposed of and the money collected. All expenses to date have been taken out of money already collected.

* * *

Lieser Brothers, prune and potato growers, four miles east of Vancouver, had 54 acres of potatoes in the ground this fall and had them dug just a few days before the cold weather came on. Not expecting a cold winter so early, they had not provided shelter for the potatoes.

The Washington Growers' association, which handled the prune crop of the members, has a big packing plant in the railroad yards. This was obtained and the entire crop of more than 5000 bushels was taken to the packing plant, which was kept above the freezing point.

Coming Events of Interest

Jan. 20—Charles G. Sprong Holstein sale, Grandview.
Jan. 23-28—Poultry show, Spokane.
Jan. 26-27—Grain grow'rs, ship'rs, mill'rs' meet, Spokane.
Jan. 30-Feb. 3—West. extension conference, Portland, Or.
Feb. 2-3—North Pacific Fair association meet, Spokane.
Feb. 6-7—Davis and Butchart Bros. Holstein sale, Granger.
Feb. 15-17—W. Walsh. Horticult. Ass'n meet, Mt. Vernon.
Feb. 20-21—West. Royal breeders' swine sale, Spokane.
Feb. 22—Shorthorn breeders' spring sale, Spokane.
Feb. 23—Day & Rothrock Shorthorn sale, Sprague.
Feb. 24—A. D. Dunn Shorthorn sale, Wapato.

FARM BUSINESS AND MARKETS OUTLOOK

A moderate increase in cattle receipts at the 10 leading markets has been absorbed without further reductions in price.

Around 50 per cent of the hog arrivals at Chicago during December were taken by outside buyers, the best showing since 1894.

The lamb market passed the $12 line in the middle west with the Chicago top at $12.90.

Greater activity in the horse market.

Unsettled state in the wheat market.

Egg prices crashed downward under the impetus of large receipts.

Butter markets continued weak.

FARM BUSINESS OUTLOOK

January is always the month of most numerous bankruptcies because of the year end settlements. Events of this sort which have come to the surface in the last 10 days are characteristic of the season, especially in hard times. Probably the end is not yet, as the wreckage from the financial storm must be cleared away sooner or later. Business failures in 1921 numbered 19,652, the largest since 1915, and, with this exception, the largest in 24 years. The total in 1920 was 8801.

Of all the business factors, money conditions have improved most in the last year. The rediscount rate has dropped from 7¼ to 8 per cent a year ago to a 4½ to 5½ per cent basis, the federal reserve ratio has advanced during the year from 45.4 to over 71, gold holdings of the system have increased over $800,000,000 and note circulation has decreased about $825,000,000 or around 30 per cent. Call money in the east is as low as 3 per cent and time money has been placed at 4¾ per cent in New York and 5½ per cent in Chicago.

In spite of the improvement, however, money is still tight in many country districts because of overdue loans and crop prices too low to provide the wherewithal with which to pay them. Some of these obligations will be lifted during the winter by the snout of the hog or by the productive endeavors of the dairy cow or the little brown hen, but others must wait until another crop is harvested and sold.

Gains in other directions should not be overlooked. Foreign exchange rates are higher with the exception of the German mark. The English pound is around $4.20 compared with $3.50 a year ago. Freight rates are lower.

Although farm prices have declined, most of the things farmers buy are lower in about the same proportion. Deflation is no more unbalanced than it was at the beginning of 1921.

In 1922 we can look confidently for great progress toward equalization of commodity costs. Good yields in 1922 upon the acreage planted, and prices for crops and live stock that will pay costs of production and perhaps a little more on the average would do more than any one thing to restore both industry and agriculture.

The weather will have most to do with the yield per acre. The outlook for price improvement is not especially rosy, but the probability of a lower level for farm products, barring minor fluctuations, also looks improbable.

The conclusion is that betterment will come about in most farm commodities through producing in such a way that the operation will be profitable even though prices do not advance materially.

PRIME STEERS SHOW PROFIT.

Although the premium upon steers of prime and choice grade has declined perceptibly in the last month, producers of cattle of this character which are going on the market at the present time have obtained larger profits than those who are cashing in warmed up and short fed steers which now constitute the bulk of receipts. Heavy steers which were a drug on the market two months ago are now scarce and are selling close to the top.

A moderate increase in receipts at the 10 leading markets has been absorbed without further reductions in price. In fact, slight advances are noticeable in various parts of the price list.

Unless the number of partly finished steers forced upon the market decreases, no marked improvement can be expected in values within the next six weeks. Cattle markets are nearly always inundated during January and early February with cattle of the sort which are now abundant. It is possible that the supply will run out earlier than usual this year, but there is little reason to expect a departure from the normal trend. Butcher cows and heifers gradually become more scarce as the winter advances, but as long as cheap steers are to be had, prices will fail to respond to the lighter supply in the female division.

COMMON FEEDERS NOT CHEAP.

Common and medium feeder steers at Chicago are quoted at a range of $5 to $6, while common and medium stock steers are quoted at $4.25 to $5.50. Only a few loads of thin steers are being taken to the country at prices above $6, although good and choice feeders are quoted at $6 to $6.50 and good and choice stockers at $5.50 to $6.40, while selected feeder steers are available at $6.50 to $6.75.

The spread in prices from the top to the bottom of the stocker and feeder list is abnormally narrow at most of the important markets. Frequently during the fall and winter months feeders pay too high a premium for choice cattle to put in feedlots, but this year the reverse has been true and the discount upon common feeders has been entirely too small to make them an attractive purchase.

In spite of the narrow margin between thin and fat cattle, prices for feeders show but little change.

SHIPPERS CONTROL HOG MARKET.

Eastern shippers retain control of the hog market on the demand side. Around 50 per cent of the arrivals at Chicago during December were taken by outside buyers, the best showing since 1894. Last week the percentage of receipts taken by outside buyers amounted to about 60 per cent. With this competition, prices were boosted to the highest level since October, but an increased run appeared in the last few days and part of the bloom was lost.

Although the heavy winter packing season is more than half gone, immediate consumptive demand has absorbed most of the hogs sent to market. Big packers who accumulate most of the lard and cured hog products placed in storage during the packing season refuse to store product at prevailing level of hog prices.

Exports of lard during 1921 were the largest on record and were about 75 per cent larger than the average of the five years preceding the war. Exports of hog meats during 1921 were the smallest since 1917, but the total compares as favorably with the prewar average as does lard.

Until hog market receipts become materially larger than can be absorbed by immediate domestic consumption and export demand at the prevailing level of prices, the market will be well sustained.

ANOTHER SPURT IN LAMB PRICES.

A resilient lamb market went far past the $12 line in the middle west last week with the Chicago top at $12.90. Receipts at the leading markets during the past week show a small increase over the preceding week, but not enough to stay the advance in values. No severe handicaps for the market are in sight, but it is doubtful if sensational gains can be made from this level although present values may be fully maintained. Only a few native lambs are arriving, fed westerns constituting the bulk.

Prospect of a fairly strong tone for fat lambs and advancing prices for wool have encouraged shearers to enter the market and purchase partly finished lambs at Chicago as high as $11.25.

HORSE MARKET SUPPLY EXPANDS.

The supply of horses at the leading markets has increased during the last 10 days. Chicago reports the most marked activity in months with New England and New York the principal buyers. No advances in price occurred, but the increase in the absorbing power of the market is encouraging.

Chicago—Good and choice heavy drafters, $200-300; common and medium drafters, $140-200; chunks, 1450 to 1550 pounds, $150-200; 1300 to 1450 pounds, $125-160; farm chunks, $75-150; wagon horses, $125-200.

WOOL AUCTION SHOWS PRICE GAIN.

At the government auction held in Boston at which about 8,000,000 pounds, mostly of low grade wool, were sold, prices ranged from 20 to 25 per cent higher than at the December auction. Dealers were the chief buyers, although moderate quantities went to manufacturers.

It is estimated that Boston holds only about 40,000,000 pounds of wool compared with about 139,000,000 pounds exclusive of government owned wools at this time last year. The large surplus of wools in sight 20 months ago has disappeared much more rapidly than was expected. Government holdings at this time last year were about 100,000,000 pounds, but have now been reduced to about 11,000,000 pounds. Prices generally are 25 to 50 per cent higher than last spring.

WHEAT PRICES UNSETTLED

The unsettled state in the wheat market which arrived with the new year still persists. Financial conditions have been discouraging, Europe can buy wheat in Argentina cheaper than our own, flour demand has not increased as much as expected, and rains have brought some relief for drought in the southwestern winter wheat belt.

Milling demand for wheat broadened after the first of January as it was expected to do, but with the wheat market fluctuating in a rather erratic manner, flour buyers were discouraged from taking hold as fully as they might have done and the help to the market from this source was not as great as expected.

Some parts of the southwest have received heavy rains in the last day or two. How serious the damage from dry weather has been can not be determined until spring weather arrives and much depends, of course, on whether th drought has been permanently broken.

Nebraska, Kansas, Oklahoma and Texas combined have nearly 50 per cent of the entire winter wheat acreage and the average condition of the four states, according to the official report, is 61. Records of the past show that very rarely does the crop improve beyond the December condition. This year may prove to be one of those exceptional cases.

ARGENTINE WHEAT IN LIME LIGHT.

Argentine wheat for January and February shipment is being offered to Europe at prices 8 to 10 cents cheaper than American hard winter via the gulf. Germany is reported to have bought 7,250,000 bushels of this wheat in the last two weeks. In spite of reported large crops of wheat and rye, world shipments to Germany thus far in the crop year have been about double those of the corresponding period in the previous year.

In general, Europe is buying only on a hand to mouth basis at the present time. Large imports thus far have not resulted in building up reserves, hence it is still necessary to draw upon North American wheat to some extent, notwithstanding lower quotations on Argentine grain as the latter requires much longer for transport.

Argentine growers are noted speculators and much depends upon whether they sell freely at the prevailing level or not. Financial conditions in the Argentine are said to be about as unfavorable as among producers in the United States, hence there may be a fairly rapid movement of the crop which is practically all harvested. If not, European demand should be sufficient to absorb the Argentine surplus without lowering prices.

CORN PRICES SHOW RESISTANCE.

The corn market shows a good deal of stability at the prevailing level of prices. Producers are unwilling to sell on declines so that periods of weakness are short-lived as a rule. The rate at which corn is passing into distributive channels is highly satisfactory. Purchases for Russian relief aggregate nearly 5,000,000 bushels already. It is reported that about 750,000 tons of grain will be taken for this purpose, most of which will be corn which suggests a total of over 25,000,000 bushels.

OATS DEMAND PICKS UP.

The first of the year has brought an increase in the eastern and southern demand for oats so that the largest sales in a long while have been consummated. Exporters have made inquiries also. The visible supply is decreasing rather slowly and values are unlikely to enhance a great deal as long as the demand can be easily satisfied from arrivals at primaries and small withdrawals from the supply at terminals. On the other hand, declines in price are likely to be temporary.

The range of cash grain prices for the week ending January 11 was as follows:

Chicago—Wheat: No. 3 hard, $1.04½@1.11¼. Corn: No. 2 mixed, 47¼@48½c; No. 3, 46@48c; No. 4, 44½@46½c; No. 2 yellow, 47¼@49c; No. 3, 46¼@47¾c; No. 4, 44½@47c; No. 2 white, 47¼@48½c; No. 3, 46¼@48c; No. 4, 44½@47c. Oats: No. 2 white, 35¾@37¾c; No. 3, 33@36c; No. 4, 32¼@35c. Rye: 78¾@80½c. Barley: 52@60c.

CLOVER SEED MARKET REACTS.

The Australian market is quiet as non-European countries are still buying wheat. Japan has been a recent buyer in our own northwest.

A natural reaction following a long period of strength manifested itself in clover seed markets in the last few days. Prices usually advance during the early spring months when seeding starts, but the price of red clover is slightly out of line with farm grains and other seeds, particularly alsike and alfalfa, so that further gains may be small although the recent break may be fully repaired.

Toledo, per bushel: Prime red clover, $13.60; prime alsike, $11.55@11.80; prime timothy, $3.20.

FEED MARKETS WEAKEN.

Increased offerings of wheat feeds especially from the southwest have weakened the market slightly, while hominy, gluten feed, cottonseed meal and linseed meal also are quoted lower than a week ago. Demnad for tankage remains exceptional and demand for other feeds is about all that can be expected under prevailing conditions.

Chicago—Bran, $24.50; standard middlings, $24.75; flour middlings, $28; hominy feed, $22.50; gluten feed, $35.65; cottonseed meal, 43 per cent, $44; 36 per cent, $40; oil meal, $46; tankage, $52.50@55.

HAY MARKETS STILL LIFELESS

Inactivity describes the hay markets as receipts are light and demand is limited to immediate needs. Country loadings in some surplus sections are said to be increasing. Southern buying has improved slightly during the last week.

Chicago—No. 1 timothy, $22@24; No. 2, $19@21; No. 3, $15@17; No. 1 light clover, mixed, $21@23; No. 1 clover, $17@19; No. 1 clover, mixed, $19@20; sample and threshed hay, $12@16; No. 1 to choice alfalfa, $17@23; Nebraska and South Dakota prairie, $15@17; straw, rye, $15@16; oats, $13@14; wheat, $12@13.

HEAVY YIELD CRUSHES EGG MARKET.

Egg prices crashed downward last week under the impetus of large receipts at the principal markets which reflected heavy production in the country and gave buyers confidence that the supply would be ample throughout the winter.

Prices are down 20 to 25 cents at Chicago from the high point of the season a few weeks ago.

Cold storage holdings in the United States on January 1, according to the preliminary report of the Bureau of Markets, were 904,000 cases compared with 408,000 cases a

(Continued on page sixteen.)

Little Journeys to Market

COTTON EXCHANGES.

The two chief cotton markets in the United States are the New York Cotton Exchange and the New Orleans Cotton Exchange. Other points at which a great deal of cotton is handled are Galveston, Houston, Memphis, Savannah, Augusta, Norfolk, Charleston, Little Rock, Wilmington, Boston, St. Louis, Mobile, Dallas and Philadelphia. The location of the cotton growing areas and the manufacturing centers determine which markets will lead. Abroad, the principal markets are Liverpool in England, Bremen in Germany, Havre in France, Alexandria in Egypt and Bombay in India.

The New Orleans cotton market as well as the others in the United States, with the exception of New York, are largely spot markets. The transactions involve the actual exchange of ownership of cotton which is already on hand or contracted for although at New Orleans "futures" are dealt in to some extent.

Formerly a good deal of actual cotton was handled on the New York Cotton Exchange, but the business has gradually changed until the bulk of the transactions are in contracts for future delivery. The chief excuse given for these, as in the grain trade, is that they afford cotton merchants and manufacturers an opportunity to insure themselves against the risk of loss due to fluctuations in prices. This process, known as "hedging," we have previously described. Many of the purchases and sales made in matching hedging transactions are purely speculative in character. Delivery of cotton upon these contracts is seldom called for.

Bouck Men Ousted

Followers of William Bouck, deposed master of the Washington state grange, were finally ousted from the Fort Colville grange at a meeting held Saturday. The action followed a ruling by State Master Fred Nelson and is regarded as significant, since the Fort Colville grange had been made a test case by the members of the Washington Progressive grange, the Bouck organization. It also voids the transfer of the grange hall by Bouck men to one of their number.

The decision of the state master was brought to the meeting by Frank Graham of Okanogan, a member of the state executive committee and representative of the state master. The ruling was:

"A member of the grange who has voted to secede from the national or state grange can not participate in a regular grange meeting. He has by reason of voting to secede separated himself from the order. This very definitely means 'to get out,' therefore, he could not remain within. If such a person wishes to return and the members are willing to allow him that privilege, the same as in a demit, then he should apologize and again take the obligations."

Mr. Graham ruled that the Bouck men had by their own act lost their status as members and accordingly their transfer of the grange property was not legal.

The meeting was attended by 25 of the old grange members and five of the Bouck organization, and upon refusal of the five to renew their obligation to the old grange they were asked to retire from the meeting.

State Wool Growers

(Continued from page three.)

scouring plant the best in the United States. Portland, he said, has railroad competition to the interior and low ocean rates. It is centrally located on the Pacific coast, where he believes most of the western wool will be marketed. He closed by calling attention to the fact that 20,000,000 pounds of wool per annum are already manufactured on the Coast.

R. A. Ward, manager of the Oregon wool and mohair pool, answering an invitation to speak, said a great deal is to be learned about wool marketing. The wool growers of Oregon, after painful experience, decided to sell for themselves. To widen the scope of the pool, the name had been changed to "Pacific Cooperative Wool Marketing organization." We have, he said, averaged from 2 to 8 cents a pound higher than any other organization or individual in the northwest. We sell direct to the manufacturer, but have no objection to selling to dealers. We use the warehouse Mr. Faulkner told you about. Twenty million pounds of low grade wool, he said, are now consumed on the Coast. These bring 1 to 2 cents more than the Boston price. With the fine wools it is different. We successfully sell by sample, as the letter read proves. To market wool successfully we must know what kind it is and how much it will shrink. Mr. Ward then told of the contract, which is definitely to market all the members' wool for a five-year period, which, he said, is simply five years' orderly marketing, selling throughout the months when it will bring the best price. We have, he said, facilities for handling and for knowing the market. If there is a better place, we are ready to go with you, but we do not want a lot of little organizations, which the buyers will play against each other.

COOPERATIVE MARKETING.

A. J. Knollin was next introduced. He is manager of the Wool Growers' Cooperative Commission company, with branches in Chicago, Kansas City, St. Joseph, Omaha and St. Paul. He said he had been 40 years marketing sheep. This organization was taken up when the commission charges seemed too high and the commission men would not grant any reduction. He took it up because it seemed a worthy cause. He knew a work could be done in organizing for marketing, rather than the mere difference of $10 a car. With 85 commission houses at one sheep market there is no concerted action for orderly marketing on that market, but each commission firm handles his consignment as seems best to him. He told of the heavy runs on Sunday, so the Monday and Tuesday markets are often glutted. The system of cooperative marketing enables him to market where the demand is best. The splitting up of and increase in the number of firms had made necessary the increased charges, so it was up to the producer to reduce the number of commission houses. Early lambing now practiced in some places makes it easier to string out the shipments. He declared prospects for next year excellent. He got the largest percent of Washington lambs of any state and they are the best lambs. He closed by urging the value of organization. "All for one and one for all."

The place of the next meeting was left to the executive committee. It is hoped to secure the next meeting of the national association at Spokane, in which case the state meeting will be held there at the same time.

The banquet, which closed the sessions, was held at the Commercial hotel.

THE OFFICERS.

All old officers were reelected by acclamation, as follows:

President, T. J. Drumheller, Walla Walla.
Vice president, William McGuffey, Yakima.
Secretary, R. D. Sears, Prosser.

Live Stock Producers

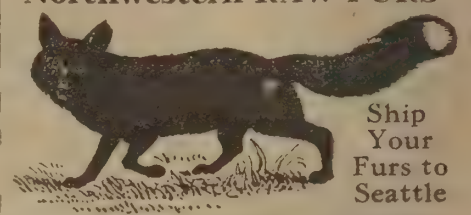
At the first meeting of the board of directors of the National Live Stock Producers' association, in Chicago, the following officers were elected: President, John G. Brown of Indiana; vice president, C. E. Collins of Colorado; secretary-treasurer, E. H. Cunningham, Des Moines, Iowa. These officers constitute the executive committee.

Urgent requests were received to establish terminal commission associations and allied stocker and feeder companies at Chicago, Indianapolis, Pittsburgh, Cleveland, Buffalo and Detroit.

The national board of directors decided to make a thorough investigation of the conditions surrounding each of these markets and no cooperative company will be established at any terminal before the trade prospects warrant it as a sound business basis.

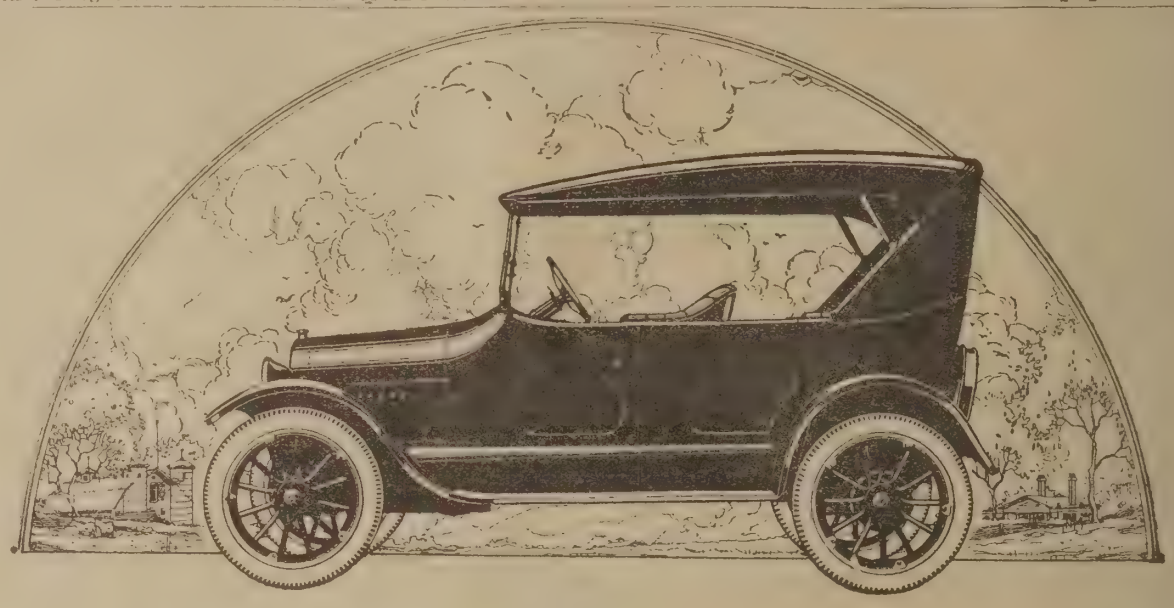
A Purebred or a Scrub Sire?

(Continued from page one.)



of scrub cattle, hogs, sheep and horses. The meeting was enthusiastic and voted January 24 as a date on which everybody interested in the fight should meet in each of the 26 counties of the state that have county agents, and in other counties where willing leaders were found, to lay plans for a survey into every locality to find out just how many scrub sires there were and start the work of replacing them by purebreds. Following the Spokane meeting five other district meetings were held in rapid succession at Walla Walla, Chehalis, Everett, Wenatchee and Yakima. These meetings agreed unanimously upon the day (January 24) for the county meetings.

At these county meetings leaders will be selected to carry the movement into each community. It is hoped that within a short time there will be, as a result, a reliable census and classification of the scrub sires now in use throughout the state, and corresponding information as to the number and kinds of purebreds that might well be substituted for them. With this data at hand, the extension service, farmers who see the benefit to be gained, breeders and stockmen will unite in a definite program of making the exchanges and financing the installation of good sires to continue with increased energy the process of improving the general live stock of the state.



TAKE UP CLUB WORK.

The Orcas Island community has the distinction of being the district in the county to take up boys' and girls' club work as one of the projects in the farm bureau for the coming year. W. H. Meyer of the East Sound Agricultural school has been appointed to take charge of this work.

What Soil Needs

Is a Debatable Orchard Problem

Orchardists, horticultural scientists, soil chemists and others who delve into fertility problems, often disagree. It is well to begin the discussion of the subject of orchard fertility, therefore, with one proposition on which they are all agreed, namely, that there is no ironclad rule to be applied to all localities. A second point of agreement, a sort of companion to the former, is that local fertility work should be based upon knowledge of local soil conditions as determined by reliable experimentation.

Now to some of the things on which there is not universal agreement:

"In the experiments of the Pennsylvania station, carried on for a period of 35 years, the greatest yields of crops were due to fertilizing with a well-balanced fertilizer, containing not nitrogen alone, but also soluble acid phosphate and potash," says E. P. Newsom of Tacoma, lecturer and chemist.

"In our experiments in the Wenatchee valley of Washington we obtained practically no results from phosphorus, potash, sulphur or lime. Nitrogen gave good results on the vigor of the trees and the fruit produced." This in substance is the statement of Roy Larsen, soil investigator in that district.

Results of Experiments.

At the recent fruit conference in Spokane Mr. Larsen presented some interesting figures from his experiments in the Wenatchee district.

Apple trees of the Delicious variety in the Fred Olds orchards produced an average of 13.55 boxes per tree where fertilized with nitrogen alone, combinations of nitrogen and phosphorus, nitrogen, phosphorus and potash, and nitrogen and potash. Those fertilized with the nitrogen alone yielded as heavily as did those with the combined fertilizers and in most instances more heavily. Trees fertilized with phosphorus, potash and phosphorus and potash combined, but in all cases without nitrogen, averaged 7.76 boxes per tree.

In the orchard of Henry Smith Delicious trees on an unfertilized plot averaged 9.4 boxes per tree, while with phosphorus and potash they averaged 9.3 boxes, with phosphorus alone 9.8 boxes and with nitrogen 11.4 boxes.

Winesap trees in the O. B. Shay orchard averaged with phosphorus fertilizer 8.35 boxes, with potash 9.15, with potash and phosphorus together 8.9, with nitrogen alone 10.3 and with no fertilizer at all 10 boxes. This orchard had grown alfalfa for six years.

In the L. T. Wilson orchard of Jonathans, where clean cultivation had been practiced, trees on a plot where Clark's special orchard dressing, a complete commercial fertilizer, was applied averaged 8.7 boxes per tree, according to Mr. Larsen, while with nitrogen alone similar adjoining trees averaged 10.3 and with sulphate of ammonia 10.1.

In the Lillis-Or orchard of Winesaps, where clean cultivation was practiced, an application of sheep manure resulted in an average of 7.6 boxes per tree, as against 16.6 boxes where nitrogen of soda was used.

Availability Is Essential.

Mr. Larsen says that the average soils of the Pacific northwest are rich in potash and phosphorus, but not so rich in nitrogen.

While not disagreeing with this statement, Mr. Larsen emphasizes the point that it is not only the presence of these fertility elements in the soil that is necessary, but their availability in a form to be used as foods by the plants and trees.

"The theory that we should analyze the soil and supply the particular plant food lacking has not worked out successfully in its application to our orchards and farm crops," says Mr. Newsom, "because an analysis of the soil may reveal the existence of an abundance of plant food; for instance, phosphate and potash, but in an unavailable form." Referring to the experiments at the Pennsylvania station, he said: "It was found that, although the analysis revealed the soil to be unusually rich in phosphate and potash, whenever either the potash or phosphate, in soluble form, was omitted from the fertilizer, the yield of crops was greatly lessened."

A point upon which there seems to be universal agreement is that orchard soils should be built up to a state of fertility that will reduce the necessity of the constant application of fertilizers of any kind. While Mr. Larsen is a devout believer in the value of nitrogen as a fertilizing element, applied in the form of nitrate of soda, he does not recommend its continuous use year after year, but, on the other hand, urges orchardists to build up fertility of their soil by means of cover crops. Where barnyard manures are available they are strongly recommended by nearly all authorities. In one instance where Mr. Larsen reported no apparent results from the use of other fertilizing elements than nitrogen, Mr. Newsom declared

1/2 more per dollar

Good News for Farmers!

The Du Pont Company announces a new farm dynamite—

DU PONT CHEMICAL ENGINEERS have developed a new dynamite, "Pacific Stumping"—and it will save you a lot of money. It will blow out ½ more stumps per dollar—blast ½ more boulders per dollar—plant ½ more trees per dollar.

Standard stumping powders are packed 85 sticks to the case. For 50 cents more, you can buy a case containing 130 sticks of Pacific Stumping—each stick of which will do equal work with any other stumping powder. This means that Pacific Stumping costs you 2½ cents (or 30%) less per stick.

This new dynamite makes stump blasting in the Northwest a far less expensive operation—and will undoubtedly make possible a great increase in land-clearing activities in this district.

See your local hardware or general store merchant now regarding your season's supply of Pacific Stumping Powder. Write us for booklet, "The Development of Logged-Off Lands," which gives full instructions for its use.

Ask your County Agent how the Federal Farm Loan System will help you clear your land.

Community Bull

Associations Help Solve Problem

Modification of the bull association plan advocated by the dairy division of the United States department of agriculture are tried frequently. Most of these plans consist of loose agreements between two or more breeders. In some cases a bull is purchased by a group of men. Sometimes two or more breeders exchange their bulls. The idea in this case is to do close line breeding and yet avoid inbreeding.

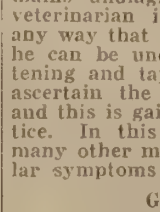
A specialist of the department who has had extensive opportunity to observe the working of most of these methods, when asked about their success, replied that some of them would give excellent results it carried out, but it was generally impossible to get them to function, for lack of the driving power and balancing influences that are found in the regular bull association.

"These ideas," he said, "are all right, but they have no working agreements nor plans of procedure to properly regulate their operation. The experience of the department is that such attempts are useless for general adoption, unless organized in a practical, definite, business-like way by a person of experience who can break down the prejudices of individuals. When such a person undertakes the organization of a cooperative breeding enterprise in a given locality, he generally finds it easier and more beneficial to form a regular cooperative bull association than a partnership of the type indicated.

"When attempts are made to organize a bull association it is nearly always the case that most farmers agree readily, on general principles, that the plan is excellent for the other fellow, but not so good for himself. It is necessary to have a community thoroughly interested in the plan and familiar with its method of operation. Some leader must bring these things about, and it is most unusual if any one other than an extension specialist will do this work. Even a partnership of two men is frequently found to meet with the same difficulty.

"After a properly organized association has been perfected it has in it the necessary conditions for permanence. Yet a directing supervision is necessary to its fullest success, and this can best be given by the regular extension organization of the department cooperating with the state agricultural colleges, and the amount of help that can be rendered will depend on how well the form of organization fits in with the other work of the extension forces.

"The plan of action embodied in the regular form of cooperative bull association is a plan approved by experience. It does better than any other plan in use. It has been tried, and it works. Some sort of cooperation for the maintenance of better sires is essential to the fullest development of the dairy industry, and I should advise any who are interested to stay with the regular association plan and carry it through without compromise."



LIFE PRESERVERS FOR LIVE STOCK

By DR. E. E. WEGNER, W. S. C.

RESPIRATORY TRACT, ARTICLE 8.

Pleurisy.

This trouble is one that the average owner knows very little about and gives very little thought to. It is often complicated with pneumonia, but again it may appear alone, as it frequently does. It is nearly always caused by exposure though it may appear at any time of the year. We sometimes get the wrong idea of exposure as a cause of disease and think that exposure means simply getting cold and therefore that winter time would be the time of greatest danger. This may be true but more disease is caused by sudden change of temperature than anything else and this is more likely to occur in the spring time or fall than in the winter. Animals are at work in the spring when the wind is chilly and get well warmed up when they are stopped and allowed to stand for a time in that heated condition. They cool off very quickly and therein lies the danger. Or, in the summer, when the nights get quite cold, the animals are brought in from the field warm and tired and if there is not sufficient barn room some must stay outside all night tied to a feed rack. This is especially true in the harvest time. It is this quick chilling that is dangerous. Many animals stay out all winter in severe weather and do not suffer from exposure to the same extent that others suffer in the spring and fall. The animal wintering out may get cold, but the change is not abrupt. A man may go get thoroughly cold in winter and not suffer any ill effects, but if he gets sweaty and hot and then must suddenly cool off the danger is great.

Development the Case.

Pleurisy in animals may develop slowly, or so it appears to the owner. His animal suffers from pain in the chest but does not complain until the trouble gets unbearable and this may take several days. Many times I have been told that an animal worked many days gradually getting worse, but little was thought of it until it became apparent that something serious was wrong, when an examination revealed a well developed case of pleurisy, with probably fluid in the chest.

If these cases could be identified early the losses would be very slight, but when the disease has become well developed before it is recognized the danger is great. The diagnosis of pleurisy is impossible unless the person is familiar with special methods of examination. I have never seen a case diagnosed at home, as the owner does not know the method of examining a chest. The symptoms are more or less obscure and the disease remains undiagnosed until an experienced veterinarian is employed. Nor is there any way that one can tell another so that he can be understood, as it requires listening and tapping on the chest wall to ascertain the character of the contents, and this is gained by experience and practice. In this respect pleurisy is unlike many other maladies. It has no spectacular symptoms that are easily recognized.

Get at It Early.

In the early stages mustard plasters on the chest wall are in order, as also blanketing the animals and treating them much like the cases of pneumonia recently referred to, and particularly the treatment of pneumonia in the early stages. In the

When Cows are Housed In—
Look Out for Disease

YOU cannot afford to have the winter season wipe out the summer's dairy profits. Watch out for sickness; don't overlook the slightest unhealthy symptom. Keep your eye on the milk yield of every cow. A little extra care in winter will keep the entire herd producing at a profit the year 'round.

Cows in barn—with very little green feed, much roughage and concentrates—need every aid possible to keep assimilation and digestion strong. Let these functions lag and the milk yield falls. The cow becomes an easy prey to serious disease.

Kow-Kare is the winter cow-health guardian in the best dairies because it supplies just the assistance needed to tone up the digestion and assimilation and keep the genital organs healthy. Besides its wide use in treating Barrenness, Abortion, Retained Afterbirth, Scouring, Bunches, Milk Fever, Loss of Appetite, etc., Kow-Kare is more and more being used during the winter months as an aid to general health and increased production. It acts directly on the milk-making organs, keeping them normal and healthy.

Kow-Kare costs so little and means so much to cow owners that no dairy should be without a constant supply. General stores, feed dealers and druggists can supply you at the new reduced prices of 65c and $1.25.

Write for our free book on cow ailments, "The Home Cow Doctor." Make this a dairy-profit winter.

Where Does the Money Go?

CLEAR, concise records will help you to make your dollars go farther and bring bigger returns. Keep records. The Papec way is simple and easy. A few entries daily in our Farmer's Record and Account Book will show you where the money goes and what return it brings. There are 50 pages for accounts, inventories, breeding records, useful tables, etc. Easily worth a dollar, but you can get it *free*.

THROWS AND BLOWS

How To Get This Book FREE If you own a silo or intend to build one this year, write us stating its size, also the name and address of your dealer. We will promptly mail you this book—*free*.

The Powerful PAPEC Ensilage Cutter

The Papec is made from the best materials by skilled workmen in the largest exclusive ensilage cutter factory in the world. Principles of construction adopted 20 years ago have been improved, but never abandoned. Time has proved them correct. The Papec runs with little power—3 h. p. and up, lasts many years and requires few repairs. *Six fans*, instead of the usual three or four, keep the silage moving in a steady stream—prevent clogging. Four sizes: 10-inch; 13-inch; 16-inch; 19-inch.

The Papec Guarantee is different—the strongest given by any ensilage cutter maker. Write for it today, also full particulars.

POST CARDS BRING BIG RETURN

Many of our advertisers offer free booklets and information which is very much worth your while to send for. A postal will bring them. Why not place a dime or so in your rural mail box with a note requesting the carrier to leave you some cards? Then use the cards in writing advertisers. When you do so be sure to mention THE WASHINGTON FARMER.

"The H-L-F Has Got Anything Skinned in the Way of a Silo"

That's what farmers tell me, and I believe it. The silo seems to be right in every way. I invented it, and I'm no long-haired inventor, but just a plain business man.

3632 H-L-F Silos in use

I invented it in 1914, when Hewitt - Lea - Funck Co. was having a hard time to sell stave silos. I got up a silo that was a building, rather than a barrel, and farmers jumped at it.

I figured, and farmers everywhere agree with this, that a wooden silo actually does keep silage better than anything on the masonry order. But the common stave silos shrink apart like any other barrel, and farmers feel, as William Cox of Kendrick, Idaho, wrote us a short time ago: "I have chores enough without climbing all over a silo with a monkey wrench every once in a while.

This H-L-F Silo, then, is a building with double walls, practically round, very strong. The outer wall protects the inner from weather, and the dead air space between walls prevents practically all trouble from frozen silage.

H-L-F Silo

Direct to You at Factory Price

That's the way we sell the silo—direct to farmers at factory price. We're taking our loss this year and prices show a big cut over 1921. We have no quarrel with agents—in fact we are willing to pay a farmer a small commission for interesting his neighbors—but we refuse to sweeten the selling price to pay for glad-hand men to travel around the country in automobiles.

Single Silos Anywhere at Carload Price

We make our silos, all the way from the tree, in a modern silo plant in the big tree country. The popularity of the silo makes it possible to form carloads by shipping in one car orders for several nearby points, so as to give every farmer a rock-bottom freight paid price—the carload price for a single silo.

Free Roof Saves $35.00

If I could afford to take a page to it, I'd tell you a lot more about this silo. For one thing, we give roofs free with early orders—that saves you $35.00. If you're interested in a silo, I wish you'd write—or just use the coupon—for my book, entitled "All About Silos." Lots of information in it, and with it goes a price list and owner list. Send the coupon right away, please. Then, if you decide to buy, you'll be in time for the free roof. And, as I said at the start, this H-L-F Silo has got anything skinned in the way of a Silo.

latter stages of pleurisy the sacs fill with fluid and emerse the lungs, or the lungs float upon the fluid until the lower parts get filled with fluid and become useless for breathing purposes. The animals then are very short winded and may be almost suffocated. The portion of the lung in the fluid becomes so diseased that it is permanently useless and even if some of these animals live they are frequently short winded and quite valueless for working purposes.

We frequently draw off this collected fluid and this gives relief for a short time, but the chest cavity usually fills again within a short time. I have removed as much as eight to ten gallons of fluid at the first tapping, this, of course, gave temporary relief but not permanent.

To be successfully treated pleurisy must be diagnosed early, as after it has once well established itself the chance of getting a recovery that leaves the animal workable is rather remote. And it is a fact that an animal that has lived only to slow down a team for the rest of its life because of its short windedness, is not worth any more than a dead animal, unless it has valuable breeding qualities.

Motor Freezing

A CORRECTION.

By L. J. Smith, W. S. C.

The article which appeared in a recent issue of this paper, under the above heading, requires further explanation. The impression was wrongly given that calcium chloride to be used in an anti-freezing solution was common salt.

It is a chemical salt, but not the salt used on our tables, which is chemically known as sodium chloride, not calcium chloride.

From a letter just received in regard to this matter, the writer apparently had the impression that calcium chloride was the same as chloride of lime, the commonly used bleaching powder and disinfectant, which is highly corrosive. Pure calcium chloride is mentioned in the standard automobile books as one of the commonly used anti-freezing solutions; but with the caution that it must be free from acid, which if present in any anti-freezing solution, would cause electrolytic action, and therefore radiator leaks.

The article above referred to gave the per cents of the sale by volume. Page gives the following, which is simpler:

Calcium chloride.	Freezing point.
2 lbs. to 1 gal. of water	18 degrees F.
3 lbs. to 1 gal. of water	1½ degrees F.
4 lbs. to 1 gal. of water	17 degr's below zero.

From the above, 3½ pounds per gallon of water would freeze at 8 or 9 degrees below zero.

If the solution has acid in it, it will turn blue litmus paper red; and the acidity should be neutralized by adding ammonia or soda ash in small quantities and stirring well, until the blue litmus paper no longer turns red. Litmus paper may be bought at any drug store.

Glycerine or any of the patent solutions should be tested for acidity before using. One should not buy a patent solution, unless it has the stamp of a widely and favorably known firm.

Wheat and Taxes

Are taxes a menace to the wheat farmer? If so, what are we going to do about it?

State Senator F. J. Wilmer of Rosalia, a recognized authority on taxation problems, is going to answer these questions before the annual meeting of the Grain Growers, Shippers and Millers' association in Spokane, January 25-27.

Other speakers on the program include D. W. Whitlock of the United States department of agriculture; J. C. Cunningham of the state department of agriculture; E. C. Johnson, director of the state college experiment station; W. J. Robinson of the Washington Wheat Growers' association; Professor George Severance of the state college; President Alfred Atkinson of the Montana State college; J. K. McCornack, Spokane banker; F. C. Forrest, banker of Pullman; W. B. Armstrong, president of the state farm bureau; Governor D. W. Davis of Idaho; W. T. Harshman, milling chemist of Spokane; M. P. Miller of Moscow, Idaho; R. L. Cox Jr. of the United States department of agriculture; E. J. Iddings, dean of the college of agriculture of the University of Idaho; B. Gillespie, farmer of Ritzville, and many others who will deliver formal addresses or participate in the discussions of vital problems.

The program includes such subjects as federal and state grain grades, general agricultural problems, the farmer's financial problem, cost of production studies, farming and banking, the war finance corporation, the milling of wheat, the farm bureau, the effect of variety of wheat on the flour produced, diversified farming, taxes, tillage methods and so on.

POULTRY

Enter Poultry Game

"We only have 300 hens which we are raising while we are learning the business," explained E. M. Cook of Alderwood Manor, who owns one of the many small poultry farms which dominate this district. Most of the farms are five acres in size and in all cases the land was purchased in the rough, the new owner either clearing out the stumps himself or contracting the work.

A large per cent of these residents have come to the neighborhood with the intention of working into the poultry game as they learned it by actual experience and very often we find a flock that is managed entirely by the housewife while the husband looks after the heavy work, such as feeding grain and cleaning the dropping boards in the morning before going to work.

In this particular case Mr. Cook attends to the work himself, having moved his family from Minnesota for their health less than a year ago. Since he got rather a late start with his new laying house, he decided to equip the building for mature birds, and therefore began to look around the neighborhood to find some pullets which would soon begin laying. He found some one who was overstocked with pullets and offered the birds at $1.50 each at the age of three and four months. At this price, Mr. Cook figures one can be more certain of getting a good start and he avoids the expense of a brooder and does not have to market the male birds.

"We had good luck in getting the birds to laying and by the first of December they were producing a 70 per cent lay," said Mr. Cook. "Of course we are using plenty of egg mash and sprouted oats as well as about 14 quarts of buttermilk daily. The lights are turned on at 6 a. m. and then again in the evening until 7.

"There are many improvements that we intend to add as we get at them, such as an oat sprouter and litter carrier. An old wheelbarrow does the work for cleaning the dropping boards at present and I have one that will just fit under the boards. It is important to get this job done early in the day so as to avoid foul air. The litter should also be kept clean and it will prevent the eggs from being dirty."

The poultry house is the open front type with glass windows that can be adjusted and the lower frame for ventilation can be set at any angle desired to break the force of the draft and direct it upward. The roosts are also protected from draft by boards which lead the incoming air behind and above, thus giving an abundance of fresh air. The roof is peaked and shingled, which is considered better than the ordinary tarred paper and it lasts longer. The arrangement is so that another section can be added later on and still be handy to the feed room, which will then be in the center of the entire building.

"We keep one cow for family use and find that the birds are more fond of the clabbered milk than they are of the buttermilk," continued Mr. Cook. "There is one trouble with it, however, and that is the fact that the milk will not clabber in cold weather. It either has to be kept warm or else allowed to stand for several days before it is ready for use. When we first began to feed the flock we tried mixing the grains at home, but we found there was a heavier egg production when we used the ready mixed feeds."

An Errant Thermometer

By MRS. L. GOOS, Washtucna, Wash.

Several years ago I had the misfortune of breaking my thermometer while cleaning the incubator. I secured a new one at once and started the incubator again. I noticed that it seemed to warm up unusually easy, also that, although I kept the thermometer near the 103 degree mark, the embryo chicks were not developing as fast as I thought they should. On the 21st day not an egg pipped. I kept the temperature up until the 23d day, but did not get a single chick. As the new thermometer was a standard make I could not understand the trouble, so I tried it once more, with the same results. One evening I brought the thermometer into the house and laid it on the dining table. My husband, who sat nearby, saw it and picked it up. Suddenly he exclaimed: "Why, I have a fever."

I looked at the thermometer, which he was still holding in his hand, and it registered 102 degrees. As I knew that my husband was in good health, the riddle was solved. We returned the thermometer to the dealer and he gave us a new one, which was correct. But I had wasted about 250 purebred eggs.

Sell Them at Auction

The idea of purebred sire sales has been successfully extended to poultry in Sonoma county, Cal. The county agent reports that there were received, preparatory to a White Leghorn cockerel sale held at Petaluma on October 15, consignments from 14 breeders on the Pacific coast.

Most of the 52 cockerels consigned represented unusually high breeding for poultry. Many of them had pedigrees extending back eight or nine generations, with trap-nest records of their maternal ancestors. Most of them had inheritance records of over 275 eggs, and some over 300 eggs, annually. A significant fact is that 1000 copies of the catalogue of this sale were printed, indicating the widespread interest in guaranteed purebred poultry stock.

Poultry Demonstrations

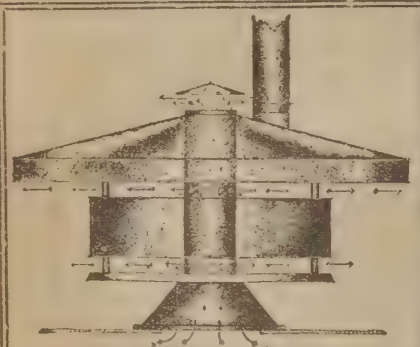
W. D. Buchanan, poultry specialist from the state college, Pullman, has arranged to devote 10 days to Lewis county during the next few months to assemble poultrymen at various convenient centers and instruct them in the business. Demonstrations of culling of birds and other information that poultrymen can use to advantage will be features of the meeting. Egg production in Lewis county is taking first rank as one of the biggest industries of the county, and more persons are making plans to engage in the business extensively next spring.

FEEDING GREEN CUT BONE.

In a recent item concerning the feeding of green cut bone as a partial remedy for the habit of feather-pulling in chickens, a typographical error was made, in which the word "pound" appeared where the word "ounce" should have been used. The statement should have read: "Green bone, fed at the rate of about one-half ounce per bird three times a week, will also help to cure this condition."

COOPERATIVE EGG MARKETING.

Through operation of cooperative buying as well as cooperative selling organizations, poultrymen of Denmark who sell their eggs in England are said to get back 98 per cent of the price the consumer pays for them.



64 BREEDS Most Profitable chickens, ducks, turkeys and geese. Choice, pure-bred, northern raised. Fowls, eggs, incubators at reduced prices. *America's great poultry farm.* 29th year. Valuable new 100-page book & catalog free. R. F. NEUBERT Co., Box 821 Mankato, Minn.

Will your "Good Morning" last all day?

Easy to start from the breakfast table with zest and enthusiasm, but how easy is it to keep on? Does ambition last, or lag, as the day develops?

The afternoon "slump" is a factor to be counted upon, in business or social life.

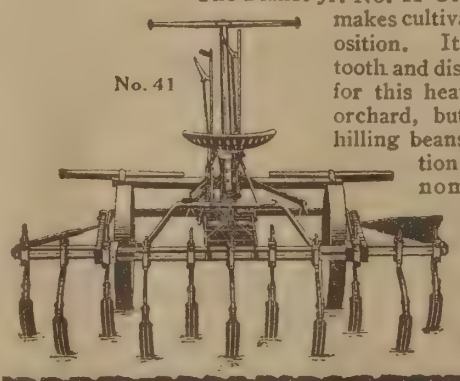
Usually, there's a reason.

Nerves whipped by tea or coffee won't keep on running, and they won't stand constant whipping.

Many a man or woman who has wished the afternoon would be as bright as the morning has simply been wishing that the nerves wouldn't have to pay the natural penalty for being whipped with the caffeine drug.

Postum gives a breakfast cup of comfort and cheer, without any penalties afterward. There's no "letting down" from Postum—no midday drowsiness to make up for midnight wakefulness; no headaches; no nervous indigestion; no increase of blood pressure.

Think it over. There's full satisfaction in Postum—a cup of comfort for anybody (the children included), any time.



You can get Postum from your grocer or your waiter today, and probably you'll begin to have better tomorrows, as so many thousands have had, who have made the change from coffee to Postum.

Postum comes in two forms: Instant Postum (in tins) made instantly in the cup by the addition of boiling water. Postum Cereal (in packages of larger bulk, for those who prefer to make the drink while the meal is being prepared) made by boiling for 20 minutes. Sold by all grocers.

Postum *for* Health
"There's a Reason"

ORCHARD

GRANVILLE LOWTHER
EDITORIAL CONTRIBUTOR

Costs to Consumers

I was in Philadelphia over Christmas and concluded to visit at Wayne, a suburb of Philadelphia, where I spent a few days. Where I stopped they had apples on the table in a large dish and every one had fruit according to taste and for every meal. The variety was Rhode Island Greening, fairly good to the taste, but scabby, scaly and such as in the northwest would be "C" grade or thrown into the cull pile, still they were ripe and of rather good flavor.

"How much do you pay for apples?" I inquired.

"Thirty-five cents for quarter peck," said my hostess.

"You mean 35 cents per peck?" I rejoined.

"No, I mean 35 cents per quarter peck and potatoes the same price," was the reply.

"Let me see," I said, "35 cents x 4 equals $1.40 per peck. One dollar forty multiplied by four equals $5.60 per bushel for either potatoes or apples."

"Now, how much did the farmer receive?"

"I do not know," was the reply.

Neither do I, but from other investigations I have made I am guessing the grower received less than one-fourth of that amount, yet here they are right near the great markets.

Recently I talked with a large apple grower on the Hudson river, near the city of New York, and this grower allowed his apples to rot in the orchard in the year 1920 because the price would not justify picking them, at the same time apples in New York city retailed for $5 per bushel.

G. L.

What Orchard Soil Needs

(Continued from page seven.)

that the orchard had received a heavy coating of barnyard manure three years previous, which he thought served to remove the necessity in that case of the fertilizers other than nitrogen.

Bacteria Essential.

"The chief agency in rendering plant food in the soil available is carbon dioxide," says Mr. Newsom. "This is generated through bacterial action in the process of the decay of vegetable or animal matter in the soil. It is also derived from the atmosphere and finds its way into the soil by means of the rain, which carries it in solution. But the bacterial action is slow and does not supply, even with the aid of alfalfa or other cover crop, the needed carbon dioxide fast enough to prevent the 'skip' crop every other year in our orchards, especially with the older trees.

"The value of rotation of crops depends upon the slowness of bacterial action. A root crop, for instance, feeding heavily upon potash, if followed by a root crop exhausts the potash faster than the supply of carbon dioxide can render it available, and hence should be succeeded in the second year by wheat or corn, that, while feeding heavily on the phosphate, uses or assimilates the potash sparingly.

"But trees in an orchard can not be rotated. Hence they should be supplied with available plant food, not nitrogen alone, but potash and superphosphate as well, to supplement the action of the bacteria and give the orchardist a maximum crop every year.

"The enthusiastic horticulturist may think he has discovered a mare's nest, or something very wonderful, when he tells you he put potash or superphosphate on an orchard and got no results. With an inadequate knowledge of the chemistry of fertilizing he may jump to the conclusion that there is enough potash and phosphate in the soil to last a thousand years, and, therefore, they are not needed. He should remember that a man with dyspepsia can not eat a regular meal, however palatable and delicious it may be. The leaf is the stomach of the tree. With a given leafage the tree can only assimilate a certain amount of available potash and phosphate. Bacterial action may supply enough available potash and phosphate to feed the tree with the given leafage, but with only a fair or poor crop of apples.

"But suppose we increase the leafage by supplying nitrogen alone without at the same time supplying additional soluble potash and phosphate. The case is the same as that of the man who, though cured of the dyspepsia, is not allowed to have anything more than his malted milk. One, therefore, might just as well put brick dust on the ground of his or her orchard as to put there superphosphate or potash and expect results, without at the same time applying to the the additional nitrogen to increase the stomach capacity, so to speak, of the tree so that it will be able to assimilate it.

"The horticulturist makes another discovery. He feeds his trees on nitrogen alone and the first year, perhaps, he gets an increased yield, and he concludes that nitrogen is the only thing needed in a fertilizer. This conclusion is equally as erroneous as the first one. In increasing the leafage the first year there is the chance that there was a slight overplus of availability of the other plant food, due to bacterial action. But when he continues the process over any measurable period of time he will find that he has laid too heavy a burden on the backs of the bacteria.

"It must be patent, therefore, that an orchardist takes little or no risk when he uses a complete, well-balanced fertilizer on his orchard."

VALUE OF SHEEP MANURE.

The moisture content makes a great difference in the fertilizing value of sheep manure and other manures. The fertilizing elements in common sheep manure are largely nitrogen, phosphorus and potash. It will test approximately 1.8 per cent nitrogen, 1 per cent phosphorus and 1.8 per cent potash. The average manure contains these elements in approximately one-third the amounts found in the sheep fertilizer.

PEACHES AT THREE YEARS.

Three-year-old peach trees often bear small quantities of fruit.

400 BU. PER ACRE — $950 PER ACRE

Sonderegger's Prizetaker Onion We find this to be the largest and handsomest Yellow Globe Onion for home or market. It grows to an immense size, but is fine-grained, mild and of delicate flavor. Fine for fall and winter use. Frank Woodfill, a Nebraska farmer, wrote: "Six Sonderegger Prizetaker Onions, set side by side, measured 22 inches. I used 100 lbs. of nitrate of soda and grew 400 bushels of Prizetaker Onions on less than one acre. They were the finest onions I ever grew."

Campbell's Early Grape A new variety, vigorous growth, very hardy, very early and an abundant bearer. Good shipper; keeps for weeks after ripening.

Perfection Currant In our entire experience this is the best bearer, the largest, sweetest and easiest to pick. Rich, mild flavor, less acid and few seeds.

Everbearing Raspberry The wonderful new St. Regis. First to bear and continues till late October. Very hardy. Yields first season.

Low Prices on all kinds of Fruit Trees and Plants, Vegetables, Flower and Field Seeds; Shrubs, etc. Get our big Illustrated Catalog, sent free. (33)

Why Are the Most Successful Farmers Using International Harvester Equipment?

MORE than 100,000 farmers who have decided in favor of International Harvester tractors have been guided by the same impulses.

They knew that, because of its 90-year contact with farming problems, the International Harvester Company was in better position than any other company to design and build long-lived, practical farm tractors.

They knew that in the International Harvester line they could find both tractors and machines which were designed to work together as field units.

They were absolutely sure that the most practical and helpful service would be quickly and easily and forever available to them. Many years' experience with the International Harvester Company had convinced them that nowhere else could they find a line of power farming equipment so closely backed by satisfactory service.

They knew that these factors would guarantee their investments for years of usefulness. Year after year the wisdom of Titan-International Tractor ownership grows more apparent.

Let the judgment of these 100,000 farmers help you. For belt work now and for drawbar work in the spring, follow their advice. Use International equipment. *Remember that both Titan 10-20 and International 8-16 now sell for $900—lowest prices ever quoted on these tractors with their present equipment.*

48 First St., Portland, Ore.

Will Keep Agent

Assurance that the Snohomish county agent and home demonstration agent will be kept for the coming year is given by a report of the solicitors who have been calling on the farmers and business men in all communities in the county and have raised approximately the $5000 needed in two weeks' time. The drive was started a few days before Thanksgiving and was hampered greatly by snow and floods, but every one concerned felt the need of raising the money in order to meet the demands of the extension service, which furnishes an equal amount of state and federal money. R. M. Turner, assistant county agent leader, has been assisting with the campaign. The county commissioners had failed to provide for this work in their 1922 budget.

The money was raised both from the business men and the farmers of the county by means of a special committee which was organized for the purpose, called the Snohomish County Agricultural Extension association. Members of the committee are as follows: A. G. Ziebell, chairman and master of Snohomish county Pomona grange; W. H. Illman of Sultan; W. G. Grimm, manager of Snohomish Dairymen's association; A. Haroldson of East Stanwood; T. H. Bowden of Everett; Mrs. N. S. McCredie of Snohomish, who represented the Woman's Federated Clubs, and Mrs. J. Mueller of Granite Falls.

In addition to the above there was a $2000 donation from one of the Everett banks for the employment of a deputy horticultural inspector. Business men of Everett subscribed a total of $2187, while the district outside of town gave a total donations with the understanding that a similar campaign will not be necessary next year.

Members of the committee felt that the drive was necessary because of the value of the work of the county agent and those who are associated with him.

Many Want the Pig

The Washington Farmer's letter contest on the subject of "Hogs as a Byproduct on Washington Farms" closed December 31. Judging of the scores of letters received is now in progress and the winner will be selected and announced in the near future. The following is a list of those writing letters in the contest:

D. M. Adams, Spokane.

Ira W. Adams, Ferndale; Mrs. A. E. Agnew, Kingston; F. L. Albright, Republic; R. L. Allen, Grandview; R. F. Allison, Prosser; Mrs. A. K. Anderson, Graham; J. C. Anderson, Graham; J. A. Anderson, Graham; Louis Anderson, Kapawsin; Mrs. S. W. Arrington, Synaren.

Mrs. C. M. Bagley, Sunnyside; Ora J. Baird, Sunnyside; Burnett Baker, Arlington; D. E. Baker, Tekoa; Joe Bakum, Enumclaw; Mrs. G. S. Barnhart, Sunnyside; Ruth Bennett, Prosser; Mrs. G. T. Beauchamp, Winlock; Mrs. W. L. Bockhouse, Gerome; W. D. Boyde, Olalla; Mrs. George W. Bradshaw, Sumner; Mrs. Nellie M. Brattain, Leese; Keith E. Brooks, Hanford; Mrs. Marion F. Byram, Kennewick.

Katherine Cady, Olalla; Sam P. Cary, Port Angeles; Mrs. Will Cheel, Ritzville; Mrs. W. H. Clubb, Omak; Ethel Cosner, Addy; A. J. Coulter, Boyds; Edward Christensen, Lakewood.

Mrs. R. G. Daggett, Port Landlow; Mrs. T. R. Dailey, Palouse; Mrs. G. S. D., Port Landlow; A. C. Daniel, Wenatchee; I. H. Davis, Olga; Mattie Deaton, Ellensburg; Frank S. Demko, South Prairie; Mrs. Ellen Dixon, Winona; Alfred Dugger, Ritzville; M. M. Dugger, Ritzville; Mrs. John E. Dunn, Washougal; M. Dworshak, Auburn; Mary Dworshak, Auburn.

POULTRY—Baby Chicks (Continued) 174

YESTERLAID EGG RANCH, KENT, WASH. Dear Sirs:—It may interest you to know that only last week I was offered $2.50 each for my flock of 459 Yesterlaid pullets. I turned this attractive offer down, as I know from the way they are laying that I could not afford to let them go. I raised these birds out of the 1000 chix got from you last spring, and am so well pleased with their performance that I want you to be sure to reserve me another 1000 chix for delivery about March 31st, next. Please let me have your early confirmation of this order for which check is enclosed. Yours truly, Walter Smith, Kent Wash. The above is one of the many testimonials we receive. 12,000 of these kind of chicks hatched every five days from our own eggs. Over 40,000 already sold. Order day-old chicks and hatching eggs now. Yesterlaid Egg Ranch, Kent, Wash.

WHITE LEGHORN AND ILL-A-HEE BARRED Rock chicks—Buy chicks this year that live and grow and are bred to lay. Butler White Leghorns and Ill-a-hee Barred Rocks are known for high average flock production. Before ordering elsewhere, write for circular telling how our breeding methods produce 200 flocks for our customers. All stock trap nested and pedigreed. Also get our prices on breeding cockerels and hatching eggs for each breed. Address Butler Poultry Farms, or Ill-a-hee Poultry Farm, Jennings Lodge, Ore.

"FRESHLAID" WHITE LEGHORN CHICKS have the qualities you want; vigor and scientific breeding for heaviest egg production; every "Freshlaid" male is from a high record hen. Freshlaid farm is one of the largest and oldest chick plants in the Inland Empire. Our new catalog, "Success With Chicks," is free but is worth $ to you. Write for it. A complete guide from start to finish. Farmers read my plan, "$500 extra on every farm." You can't fail my way. Freshlaid Farm, Colfax, Wash.

THE PROGRESSIVE HATCHERY — BABY chicks from vigorous range bred stock; trapnested S. C. White Leghorns, $20 per 100; selected S. C. White Leghorns, $18 per 100; S. C. R. I. TRACK'S END

By HAYDEN CARRUTH

A Stirring Story of Adventure

(Copyright by Harper & Bros.)

SYNOPSIS.

Track's End is a prairie village in Dakota in the early days at the end of the western railroad. Jud Pitcher, a lad of 18, is one of the "pioneers" who has left home to make his fortune in the west. Very soon after reaching Track's End he earns the enmity of a dangerous man, Pike. A terrible blizzard comes and one by one the settlers return to their old home for the winter until Jud, the boy, is left entirely alone to spend the winter, with no train service until spring. He has charge of the entire village, with its store, bank, hotel, and the horses and cows. Kaiser, the hotelkeeper's dog, and Pawsy, the hotel cat, are his only "human" companions. About him are enemies, including Pike, and his roving gang, that promise to keep him busily occupied until the spring thawup, when the train resumes its weekly runs and the settlers come back. Wolves are the first enemy to offer trouble, but Jud succeeds in overcoming their first onslaught. He devises ways and means of making marauding parties of men and Indians believe the town is still filled with people. He hunts up food and ammunition and settles down for a long vigil of several cold months.

CHAPTER VIII.

I begin my letters to my mother and start my fortifications; then I very foolishly go away, meet with an accident, and see something which throws me into the utmost terror.

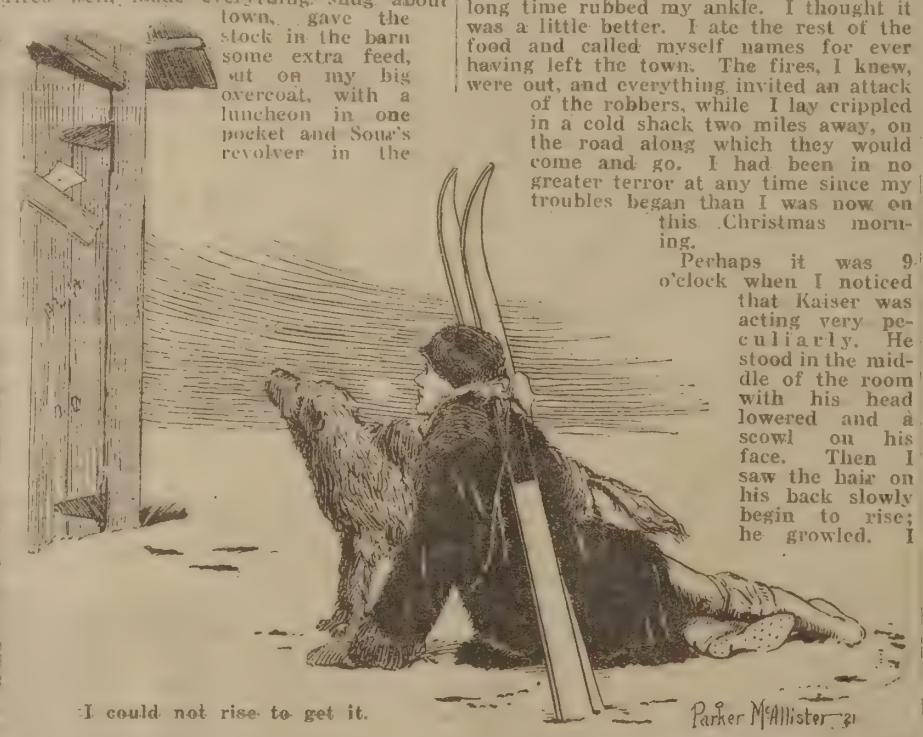
The next day, the 19th of December, was Sunday. I had been left alone (or, rather, let me say the truth, I had, like a fool, refused to go) on Friday, which seems in this case to have been unlucky for me, however it may ordinarily be. I woke up early, half cramped with the weight of the bedclothes. I had piled on so many, but I was none too warm, either. I put out my drawbridge and got back to the hotel and started the fire. Outside the thermometer stood close to 35 degrees below zero, but the sun was rising bright and dazzling into a clear, blue sky.

Kaiser's leg was no better and Pawsy was still nervous and kept looking at the windows as if she expected wolves to bolt in head-first, and I did not blame her much. It seemed to me that the wolves had howled most of the night. I only wished that the timber beyond Frenchman's Butte and the coteaux and the Chain of Lakes were a hundred miles away, for without them there would have been no wolves, or nothing but little prairie wolves or coyotes, which, of course, don't amount to much.

As soon as my own fire was started I went about town and got the others going; this I called "bringing the town to life." As I stood at the depot and watched the long columns of smoke from the chimneys it scarcely seemed that I was the only inhabitant of the town. After I had had breakfast and done up the work at the barn I sat down in the office and was glad enough that it was Sunday. I suddenly thought of a way to spend the day, and in 10 minutes I was at something which I did every Sunday while I stayed at Track's End.

This was to write a letter to my mother, stamp and direct it and drop it in the slot of the postoffice door. Of course it would not go very soon, but if nothing happened it would go some time, and, I thought, if I am killed or die in this dreadful place, the letters may be the only record she will ever have of my life here.

I accordingly set to work and wrote her a long letter, telling her fully everything that had happened so far, but without much of my fears for the future. I told her I was sorry that I had got myself into such a scrape, but that, now being in, I meant to go through it the best I could.



The next morning, Monday, I began work on my fortifications, by which name I included everything that would help to keep off invaders. I started two more fires, one in Townsend's store, at the south end of the street, and the other in Joyce's store, at the north end of town and nearly opposite the harness shop. I made another visit to Taggart's and found some barrels of kerosene, which I needed, and more ammunition. Still another thing was a number of door keys, so that I made up a string of them with which I could unlock almost every door in town. In Joyce's, besides groceries and such things, I found a buffalo overcoat, which I took the liberty of borrowing for the winter. It was so large for me that it almost touched the ground, but it was precisely what I needed, and, I think, once saved my life, and that before long.

I kept at the fortification work for four days pretty steadily, though I did not use the best judgment in picking out what to do first. I was fascinated, boylike, with the tunnel idea, when, I think, with the knowledge I then had, it would have been wiser to have paid more attention to some other things, but, as luck would have it, it all came out right in the end. I boarded up a few of the windows, but not many, and did nothing whatever at providing a secret retreat in case of fire, though I had a plan in mind which I thought was good. Worst of all, I left the Winchesters about here and there without any particular attempt at hiding them. But I kept at the tunnel hammer and tongs.

There were two front windows in the hotel office. At one of these the snow came only a little above the sill, which was the one where the wolf had come in, but the other was piled nearly to the top. It was even higher against the bank front opposite, and at no place in the street between was it less than four feet deep. Both buildings stood almost flat on the ground. I took out the lower sash of the window in the hotel and began work. I made the tunnel something over two feet wide and about four high, except where the drift was no more than this, where I did not think it safe to have the tunnel over three feet high. The snow was packed remarkably hard, and, as it all had to be carried out through the office in a basket and emptied in the street, it was slow work. But at last, on Thursday evening, it was done, and Kaiser and I passed through it, but nothing could induce the cat to come nearer than the window. I was very proud of my work, and went through the tunnel 20 times with no object whatever.

The next morning I ought to have gone at other fortification work, but instead I thought up the foolish notion that I ought to go out to Bill Mountain's to see if Pike had got our letter and had left any in reply. It was Friday, the day before Christmas, and I thought that the holiday would be more satisfactory if I knew about this, though, to tell the truth, I had not worried much about the gang's coming since I had been so taken up with the tunnel, I had been so careless that I might have been surprised 20 times a day.

It was a pleasant morning, and not very cold. Andrew had left behind a pair of skis, or Norwegian snowshoes—light, thin strips of wood, four inches wide and eight or ten feet long—and, though I had never been on them but once or twice, I determined to use them in going. I fixed the fires well, made everything snug about town, gave the stock in the barn some extra feed, put on my big overcoat, with a luncheon in one pocket and Sour's revolver in the other, and started. Kaiser's leg was still a little stiff, but I let him go along.

I could not rise to get it.

Parker McAllister—21

I think I fell down three times before I got out of town; it was as many as this at least, and outside of town, there being more room, I fell oftener. But I soon began to improve and get along better. I decided to follow the railroad grade west, as it was most of the way higher than the prairie, and the snow on it was smoother.

When I got opposite Mountain's I found the grade some 10 or 12 feet above the prairie, but it looked a very easy matter to slide down on the skis. I had seen Andrew go down the steep side of Frenchman's Butte. I accordingly slid, went wrong, fell, turned my ankle, and found myself on the hard snow at the bottom unable to stand on my feet.

I lay still some time, thinking that perhaps my ankle might get better, but it got worse. It was still almost half a mile to Mountain's, but it was over two miles back to town. I felt that I might be able to crawl the half mile, so I started, with the skis on my back. I hope I may never again have to do anything so slow and painful. Kaiser was prodigiously excited and jumped around me and barked and said as plainly as words that he would like to help if he could. But, though I thought a hundred times that I should never reach there, I kept burrowing and floundering along and did accomplish it at last. It was far past noon. The sky had clouded over. I saw a new letter behind the board, but could not rise up to get it. I pushed open the door, crawled to the heap of hay by the stove, and lay on it, more miserable, it seemed, than ever before.

I scarcely stirred till I noticed that it was beginning to get dark. Then I crept to the door and looked out; the snow was falling fast and in big flakes. I shut the door and crawled back to the hay. There seemed to be nothing to do. I knew I could not keep up a hay fire, even if I could start one. Besides, I had a sudden fear that some of the Pike gang might visit the shanty to look for an answer to their letter, and I thought if I simply lay still I might escape, even if they did come. I ate part of my luncheon and gave Kaiser part. Then I drew my big overcoat around me as best I could, made the dog lie close up to me on the hay, and tried to sleep.

My ankle pained me a good deal, and the bed was not comfortable. I thought as I lay there that my mother and father and all the folks at home must then be at the church for the Christmas tree, and I could see the lights and the bright toys on the tree, and all the boys and girls I knew getting their presents and laughing and talking, and the singing and the music of the organ came to me almost as if I had been there. Then I thought of how, if I were home, later I should hang up my stocking and find other gifts in it in the morning, and of what a pleasant time Christmas was at home.

Every few minutes a sharp twinge of pain in my ankle would bring me back to my deplorable condition there in that deserted shack sunk in the frozen snow, and I would be half ready to cry, but, with all my thinking of both good and bad, I did at last get to sleep. Once, some time in the night, I woke up with a jump at a strange, unearthly, whooping noise which seemed to be in the room itself, but at last I made it out to be an owl to-whooing on the roof. Again I heard wolves, very distant, and 20 times in imagination there sounded in my ears the tramp of Pike's horses.

When morning came I crawled to the door again. There were six inches of soft, new snow, but the sun was rising clear, and there were no signs of a blizzard. I got back to the hay and for a long time rubbed my ankle. I thought it was a little better. I ate the rest of the food and called myself names for ever having left the town. The fires, I knew, were out, and everything invited an attack of the robbers, while I lay crippled in a cold shack two miles away, on the road along which they would come and go. I had been in no greater terror at any time since my troubles began than I was now on this Christmas morning.

Perhaps it was 9 o'clock when I noticed that Kaiser was acting very peculiarly. He stood in the middle of the room with his head lowered and a scowl on his face. Then I saw the hair on his back slowly begin to rise; he growled. I told him to hush, and waited. I could hear nothing, but I knew there must be good cause for his actions.

At last I could stand it no longer. I dared not open the door, but I seized one corner of the dry goods box, drew myself up and hobbled to the window, regardless of the pain. Going straight for the town, a quarter of a mile away, were a dozen men on horseback. I could see by their trail that they had passed within 50 yards of where I was.

CHAPTER IX.

More of a strange Christmas: I make Kaiser useful in an odd way, together with what I see from under the depot platform.

I think Kaiser was the best dog that ever lived. When I looked out of the window, what with seeing the men and with the pain which shot through my leg from my ankle, I sank down on the floor in a kind of faint. How long I lay there I know not, but when I came to Kaiser was standing over me licking my face. When he saw me open my eyes and move he uttered a sort of a whine, half like a cry and half like a light laugh, and began wagging his tail. I put my arms around his neck and drew myself up so that I was sitting on the floor. At this he began to bound about and bark as if he would say: "Cheer up, Jud; this is bad luck, but we will get through yet!"

The pain in my ankle was half killing me, and suddenly it drove me desperate. I seized my foot in my hands, drew it up into my lap, and gave it a wrench that was like to break it off. I felt something crack inside, and half the pain stopped. "I've fixed it!" I cried to Kaiser, and tried to get up, thinking I could walk, but I went down in a heap, and saw that, though it was better, I was still far from walking. The ankle was swelled to twice its right size, but I felt sure that it must now improve.

I made Kaiser stop his fuss and pulled open the door. I could just make out the horsemen going along the grade almost to the town. I crawled to the hay, and thought a long time. In the first place, I knew the fires were all out and that the new snow had covered all traces of my life about the town. The robbers would find the place deserted and would go to work upon the safe. How long it would take them to open it I did not know, but one of the many things I now regretted was that, while fooling around with my tunnel, I had neglected to take out and hide the tools that were in Beckwith's blacksmith shop, as I had intended to do, for with these I did not think it would take the men long to break into the safe.

After they had got the money two things might happen: They might take it and return west, in which case they would be almost sure to stop at Mountain's and discover me; in fact, the only thing I could not understand was why they had not stopped as they went in. I knew how much mercy I could expect from Pike and the kind of men that were with him.

The other course that they might take after getting the safe open was to stay in town for several days or even weeks, and in this case I should simply starve and freeze to death where I was. The reason that made it seem likely that they would stay a while were that there was no danger, plenty of food and fuel and comfortable places to live and sleep. At first thought I saw one reason against it, and that was that there was no liquor in the town, and I knew they were the kind of men who would prize liquor higher than food. Then I remembered that, though the contents of the saloons had been shipped away when they were closed, I had heard there was a barrel of whisky in the cellar of Fitzsimmon's grocery store, and I knew, of course, that they would find it. I thought again of my detestable tunnel, for if I had not had my mind on it so much the barrel might have occurred to me and I could have disposed of it somehow.

I thought a long time, and this was the amount of it: That in any case I had best get back to town if I could. If I reached there while they were at work on the safe I might be able to slip in unseen and hide somewhere till they were gone, and even if they did not go for some days I might manage to keep out of sight and live after a fashion. Anything seemed better than staying where I was.

I was half dead from thirst, and it seemed that no harm could now come from a little fire, so I had one started and some snow melting in an old tin can. The drink and the warmth revived me a good deal, and I decided to start immediately to crawl to the town. I thought with good luck I might make it in four hours. It was now probably 11 o'clock. I left my skis and started out. Kaiser bounded around me in the greatest delight, barking and throwing up a cloud of snow. But before I had gone 20 rods I sank, half fainting with the pain of dragging my ankle. Poor Kaiser whined and licked my face. When I revived a little I crept back and threw myself on the hay again, ready to die with despair.

I lay there half an hour in the greatest mental and physical pain; then an idea that drove it all away struck me like a flash. I sat up and drew the skis to me on the floor and placed them parallel and about 10 inches apart. Then I took one of the legs of the stove and pounded a board off of the dry goods box. It was four feet long and a foot or more wide. I beat some nails out of the box and then placed the board lengthways on top of the skis and nailed it firmly. This made me a sled, low but long and light.

I had on under my coat a jacket of coarse, strong cloth. This I took off and cut and tore up into strips, knotted them together. I fastened one end of each of these to the front of the skis. Then I let out Kaiser's collar two or three holes, tied the other ends of my ropes to each side of it, making them precisely like harness traces, and pushed out of the door and sat down on my new sled. I had like to have forgotten the letter on the door, but drew myself up and got it

Experience Letters

From Our Family Circle Women

Dear Family Circle: When I gave out a few questions asking you to tell us some of your experiences on child training I expected a good many of you to write and I have received only a few letters on this most important subject. I hope to hear from more of you. I wonder if you will agree on these methods. A. W. B.

Dear Mrs. Barland: Children are my hobby and I will attempt some helpful answers to your questions.

The pleasures and comforts of my husband and children come first before dusting and darning. A healthy and optimistic wife and mother comes before canning, pickling and baking.

I had to spat my little girl's mouth for talking back to me and after this punishment a couple of times she felt very badly, for punishments are scarce in our home. So I made a bargain with her that she would do her best to think twice before answering back and I wouldn't spat her again unless I was sure she was deliberately being saucy. This habit was soon broken. Please notice I didn't ask her to "break the habit."

I should allow the child who leaves his wraps scattered around to miss a few good times because he couldn't find them. I should let him understand that I wouldn't hustle around and help locate them.

I believe that personal cleanliness and table manners must be taught by example and care from the hour the child is born. Mother and father can not eat with their knives and wipe their noses on their sleeves and expect the children to be particular. Dirty habits and bad habits of any kind are much easier to keep "shed of" than to get "shed of" after they are formed.

Always talk to a child as if you expected him to stand up to his own punishments or the consequences of his own acts. A child comes very near being what we expect of him.

As to tattling it is very hard to draw the line between it and telling what should be told, but I believe when a child learns how every one dislikes a telltale he will strive to avoid being one.

I have not found the proper method to stop "poking" except for slow dressing in the mornings. I notice that a cool room is more "hurryful" than a warm one. But rather than be continually hurrying my children I often let them poke, for I am afraid too much hurrying tends to make a nervous family.

Now for just a word to all mothers, but especially to young mothers: Strive to make your home a constructive one and not a negative one. Instead of saying, "No, no," and "stop" and "don't" so many times a day, try saying, "Come and do this or that," and get the mischievous child interested in some good work or play. Think of something to take the place of the undesirable thing or habit, then ask them to do it. You will find that children respond more readily to such discipline than to much scolding and whipping.

Never frighten a child or put him in a dark room. Find out the cause of his misbehavior and then suggest something to take its place. If you really try to form this habit you will notice that you are growing less nervous, are more cheerful and that you are becoming a better mother.

I hope I have made myself plain and that we shall hear from many mothers.

MRS. B. M. L.

Track's End

(Continued from the preceding page.)

and put it in my pocket. There was a monstrous red skull and cross-bones on the outside of it.

If you think I did not have a time teaching that dog to draw me, then you are mistaken. The poor animal had not the least notion what I wanted of him, and kept mixing up his legs in the traces, coming back and bounding around me, and doing everything else that he shouldn't. I coaxed, and tried to explain, and worked with him, and at last boxed his ears. At this he sat down in the snow and looked at me as much as to say, "Go ahead, if you will, and abuse the only friend you have got!" At last I got him square in front and, clapping my hands suddenly, he jumped forward, jerked the sled out from under me and went off on the run with the thing flying behind.

I lay in the snow with my five wits half scared out of me, expecting no less than that he would be so terrified that he would run to Track's End without once stopping. But I made out to do what I could, and called "Kaiser! Kaiser!" with all the voice I had. Luckily he heard me, got his senses again, and stopped. He stood looking at me a long time; then he slipped the collar over his head and came trotting back, innocent as a lamb, without the sled.

There seemed to be nothing to do but to crawl to the sled, so I started, with Kaiser tagging behind and not saying a word. I think he felt he had done wrong, but did not know exactly how. The crawling pained my ankle somewhat, but not so much as before, and I got to the sled at last. I saw that it was near the trail which the men on horseback had made, and this gave me an idea: Perhaps Kaiser would follow that. I pushed on over and as soon as he saw the trail he pricked up his ears, began to sniff at the snow and look toward the town. I hitched him up again, headed him the right way, took a good hold, and shouted, "Sic 'em, Kaiser!" He started off like a shot and ran till he was quite out of breath.

After he had rested and I had petted and praised him, we went on. He understood now what was wanted, and made no further trouble. We soon got up on the grade, and found it much smoother. Indeed, the horses had left a very good road, and by sitting well back on my odd sled, so that the board would not plow up the snow, it was not at all hard for Kaiser to draw me. We were soon near enough to the town so that I began to tremble for fear of being seen. My eyes were troubling me a good deal; it was snow-blindness, but, as I had never heard of it, I was frightened, not knowing what to think.

I could see the horses standing in a bunch in the open square between the depot and town, but the men were nowhere in sight, and I doubted not they were hard at work on the safe. After a good deal of labor I managed to get Kaiser to turn off to the south until the railroad buildings were between us and the town. Then I struck out straight for the water-tank, and in a few minues was up to it.

The space below the tank was enclosed, making a round, dark room filled with big timbers. One of my keys fitted the door, and I opened it, put Kaiser and the sled inside, and shut the door. The poor dog thought this was poor payment for his work, but I could could not trust him loose. I picked up a narrow piece of board and broke it to the right length for a crutch, and so managed to hobble along upright to the end of the station platform. This was three or four feet from the ground and beneath it were a lot of ties, old boxes and other rubbish. I crawled under and around to the side next to the town and peeped over a log of wood.

The horses were standing in a huddle with their heads together, and I did not pay much attention to them. A little to one side I saw a big pile of blankets, bedclothing and other things taken from the hotel and stores, and on top of it all my guns and other weapons. I expected that they would take the guns, but was surprised at their bothering with the other stuff. I could hear no sounds of their working on the safe. All at once the door of Taggart's store opened and they came out, carrying a lot of rope and other things. Then I saw that they were not the men I had thought, after all, but a band of Sioux Indians.

ROVIG
Two-Panel Doors

HERE is the door that will be giving service when all other doors are worn out. Is is constructed of three ply veneer panels. The lock rail comes at the height where most hard wear is received. The door in the home presents an unusually attractive addition to the interior. We manufacture sash, and trim, as well as other style doors. Send for our catalog. Rovig, 2203 First Avenue S., Seattle. "Better Millwork"

Meet Mr. Strong

Inventor of the Pipeless Furnace

Mr. Samuel D. Strong, inventor of the pipeless furnace is a man well worth knowing—a man whose name will go down as one who rendered a very real service to humanity—the man who freed hundreds of thousands of homes from the drudgery of caring for stoves.

In 1909 he built the first pipeless furnace in the little shop, which later grew to be the Homer Furnace Company of which he is today president.

Other manufacturers have followed Mr. Strong in this field. But the Homer Pipeless Furnace retains many marked advantages, designed and patented by Mr. Strong which others cannot copy.

The Thermo-Seal Inner Lining saves fuel and prevents the radiation of heat, forcing heated, moistened air to circulate freely into every nook and corner of the house. Then there are the heat and rust-resisting Strokel Iron Castings, and the extra heavy fire pot, which saves coal.

Write today for our book "The History of the Pipeless Furnace," and name of your nearest Homer dealer.

Homer Furnace Company, Coldwater, Mich.

Ship furs

—if you have not yet shipped to Fouke

to

Split your next shipment, skin for skin, grade for grade, send one half to the house you've been shipping to, and the other half to Fouke at once. You will get more money for the half you ship to Fouke, you can bet your bottom dollar on that.

(We believe that we are paying fur shippers 20% to 25% more for furs than any other house in the country. We want you for a regular shipper.)

FOUKE FUR CO.
396 FOUKE BUILDING
ST. LOUIS, MO.

POST CARDS BRING BIG RETURN

Many of our advertisers offer free booklets and information which is very much worth your while to send for. A postal will bring them. Why not place a dime or so in your rural mail box with a note requesting the carrier to leave you some cards? Then use the cards in writing advertisers. When you do so be sure to mention THE WASHINGTON FARMER.

High Points in News of the Week

The provisional government of the Irish Free State is now a functioning body.

Final formalities of approving the treaty with England were carried out late Saturday afternoon, when, after a historic meeting in the Mansion house of representatives of the southern Irish constituencies who formally ratified the treaty, Eamonn J. Duggan took to Dublin castle a copy of the treaty signed by the members of the new government.

Sixty-five members elected to sit in the house of commons in southern Ireland attended the morning meeting. No women representatives nor any other adherents to Eamonn De Valera, former republican president, were present.

First on the list of eight men appointed as constituting the provisional government is Michael Collins, and it is assumed he will be made the nominal head. As a matter of fact, however, the Associated Press correspondent is authoritatively informed that Arthur Griffith, as president of the dail and chairman of the delegation that negotiated the treaty, will be looked to as its supreme authority.

* * *

Aristide Briand has resigned from the premiership of France. M. Briand's resignation came with dramatic suddenness in the chamber of deputies, for the premier, returning from his conferences with the British prime minister at Cannes, had brought the opposing members of his cabinet into accord with his policies and, by a powerful speech in the chamber, had apparently won over the great majority to his side. His blunt eloquence evoked a tremendous ovation and when he abruptly declared his intention of withdrawing from the government the members of the chamber seemed overwhelmed.

M. Poincare, former president, who accepted the premiership to succeed M. Briand, after a conference with M. Barthou and other supporters, has announced his cabinet.

* * *

Passing on its last question of policy, the armament committee of the Washington conference decided against any present attempt to limit or regulate aerial warfare and voted to refer the problem to a continuing committee for future study. Only details of technical phraseology remain to be worked out before the treaty for limitation of armament is ready for signature by the plenipotentiaries of the five great powers.

* * *

E. A. Spady, a cobbler of Emporia, Kan., expects a pair of shoes by mail from President Harding, sent for repair. Homer Hoch, Kansas representative, told the president of Spady's ability as a cobbler and the president decided to try him out. Hoch and Spady were boyhood friends.

Before the war the national wealth of Europe was mortgaged to the extent of 6 per cent. Now it is mortgaged fully 65 per cent, according to Charles A. Schact of the federal reserve bank of St. Louis, who recently discussed before a departmental meeting of the American Institute of Banking the bond issues of Europe.

* * *

Facts and figures, together with "an even dozen unquestionable points in proof that the 18th amendment is being enforced" were made public by Prohibition Commissioner Haynes in a statement on the eve of the second anniversary of the national prohibition act, which became effective January 16, 1920.

The 12 points are: The disappearance of the open sale; open drinking public dining rooms; passing of the treating evil; closing of whisky cure institutions; increased savings accounts; record breaking Christmas business; decreased drunkenness; prohibitive prices of "bonded" liquor; dangerous character of illicit whisky; surrepticiousness of present day drinking; wail of the howling minority; changed attitude of former hostile statesmen.

* * *

Intention of Postmaster General Hays to retire from the cabinet in the near future to become directing head of an association of motion picture producers and distributors, at a reported salary of $150,000 a year, was announced Saturday at the White House after a conference between President Harding and the postmaster general.

WOODWARD TO LEAVE W. S. C.

Professor E. G. Woodward, head of the dairy department of the state college of Washington, has resigned to go into practical dairy work in Connecticut, where he is leasing a farm from the president of the American Guernsey club.

Farm Business and Markets Outlook

(Continued from page five.)

year ago and a five-year average of 982,000 cases.

The decline has gone far enough to stimulate consumption still further and some confidence was restored at the close of the week.

BUTTER WEAKNESS PERSISTS.

Butter markets continued weak after the holidays as receipts increased and stocks already on hand were large, while demand failed to expand. Top scores were more plentiful and lost ground as rapidly as the undergrades. Production is undoubtedly heavy. The report of the American Creamery Butter Manufacturers' association for the week ending December 31 shows an increase of 48.4 per cent over the same week of 1920. Consumption is above the level of last year, but has not increased as much as market supply. Foreign butter arrivals have been less burdensome, consisting of 1100 casks from Denmark and 3145 boxes from London. Some Canadian butter also arrived.

Prices for 92 score fresh butter on January 11 were: Chicago, 31c; New York, 34½c; Boston, 35c; Philadelphia, 35c; San Francisco Exchange quotation, 29½c.

CHEESE TRADE SATISFACTORY.

Cheese demand is fairly active, but is confined largely to immediate consumptive demand as it is impossible to move large blocks at any one time.

Prices on fresh No. 1 American cheese on January 11 were:

Chicago—Twins, 20@21c; Single Daisies, 20½@21½c; Double Daisies, 20@21c; Square Prints, 22@22½c; Young Americans, 20@20½c; Longhorns, 19¾@20½c.

FRUITS AND VEGETABLES.

Potato markets turned upward last week and at most points are higher than a week ago. Northern sacked round whites are bringing $1.75 to $1.90 per 100 pounds at shipping points and $1.85 to $2.10 in consuming markets. Colorado growers are receiving $1.40 to $1.50 per 100 pounds for sacked rurals in wagonloads. Total shipments for the season up to the end of December exceeded those of the same period in 1920 by over 15,000 cars.

The movement of apples for the season up to the end of December amounts to 45,705 cars of boxed apples and 22,979 cars of barreled apples compared with 28,318 and 57,850 cars, respectively, for the same period of 1920. Prices show little change with Baldwins quoted at $6.50 to $8 per barrel wholesale in consuming markets.

LATEST QUOTATIONS.

The Live Stock Market.

PORTLAND, Ore., Jan. 14.—Cattle—Steady; no receipts.
Hogs—Steady; receipts, 1656.
Sheep—Steady; no receipts.
SPOKANE, Jan. 14.—Cattle—Prime steers, $6.50@7.25; good to choice steers, $5.75@6.50; medium to good steers, $5.25@5.75; fair to medium steers, $4.75@5.25; common to fair steers, $4.25@4.75; choice cows and heifers, $5@6; good to choice cows and heifers, $4@5; medium to good cows, heifers, $3.50@4; fair to medium cows, heifers, $3@3.50; canners, $2@3; bulls, $3@5; light veal calves, $8@9.50; heavy veal calves, $4@8; stockers and feeders, $3.50@5.

Hogs—Prime mixed, $8.25@8.75; medium, $7.75@8.25; heavies, $5.75@7.75; fat pigs, $8.25@8.50; stockers and feeders, $7.25@7.75.

Sheep—Prime lambs, $7.50@9; fair to medium, $6.50@7.50; yearlings, $5@6.50; wethers, $4@5; mutton ewes, $1@5; feeder lambs, $5@6.50.

The Grain Market.

PORTLAND, Ore., Jan. 14.—Wheat—Hard white, hard winter, $1.09; soft white, white club, northern spring, $1.08; red Walla, $1.04.

Receipts, wheat, 68.

New Lamp Burns 94% Air

Beats Electric or Gas

A new oil lamp that gives an amazingly brilliant, soft, white light, even better than gas or electricity, has been tested by the U. S. government and 35 leading universities and found to be superior to 10 ordinary oil lamps. It burns without odor, smoke or noise—no pumping up, is simple, clean, safe. Burns 94% air and 6% common kerosene (coal oil).

The inventor, W. W. Johnson, 31 N. Fifth St., Portland, Ore., is offering to send a lamp on 10 days' FREE trial, or even to give one FREE to the first user in each locality who will help him introduce it. Write him today for full particulars. Also ask him to explain how you can get the agency and without experience or money make $250 or $500 per month.—Adv.

Why rent when you can own a farm?

Tenant Farmers—Fathers starting sons—Young men looking for a future—Farmers who have decided to seek Virgin Soil—Get this Free Book

Any Man Can Own His Own Farm in Western Canada

In Western Canada, rich, fertile land is within the reach of any man. It is not uncommon for tenant farmers to pay for their new farms with the profits of a few crops. Fathers starting up their sons are able to buy acreage they can't obtain in ordinary overcrowded farming districts.

Men who were never able to make money out of their poor soil or expensive farms, have come to Canada and achieved independence within just a few years.

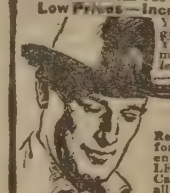
Canada welcomes such men—for here they can succeed.

Independence! Success! Here, in Western Canada, independence awaits you with every advantage at hand—schools, churches, social life, markets—everything you are now accustomed to. It is the land of unrestricted opportunity. Western Canada wants you if you will come prepared to gather the great harvest of a bountiful nature. Here you can share in bumper crops. Wheat averages are high. Rich, black loam, only awaits your hand to yield abundantly. Dairy farming is highly profitable in Western Canada. Warm, sunny summers provide unexcelled grazing—excellent hay. Dry, healthy winters make natural shelter suffice, as a rule.

This free book tells you why you will succeed in Western Canada. It tells what other men have done. It will put you in touch with your opportunity. Send for it now. It is free—your enquiry will not obligate you in any way. For a real future—investigate. You will find this book interesting as well as descriptive. Send for it now.

Canadian National Railways

Help You Select Your Farm



This department of the Canadian National Railways will help you select the farm that meets with your needs. Buy in the "cream" of the richest, most fertile wheat and cattle country of America. Own a farm that will actually pay for itself in a very few years. Taxes on land are low—buildings, improvements, animals, machinery and personal property *Are Not Taxed at All.*

Next Spring—Own Your Farm

Be your own man. Rear a future in the rich spaces of Canada. Give your children the advantages they should have. Feel "at home" with the knowledge that all your work is to *your own profit*—that it is bringing to you a reward that can't be taken away.

Low Prices—Increasing Values—Easy Terms

You can still buy land in this last great West for as low as $20 per acre. Yet, since 1915 values have increased materially. Buy now. Terms on "Selected" farms: about 10 per cent cash down, balance in equal payments over a term of years, interest usually 6 per cent.

Reduced Rates and Special Excursions

Reduced railway rates will be made for landseekers and their effects to encourage inspection of the "SELECTED" farms along the lines of the Canadian National Railways. Personally conducted excursions for this purpose also will be arranged. Full information will be sent free on request.

Your Health

By Royal S. Copeland, M. D., F. A. C. S.

HOW TO "CATCH A COLD."

Lowered vitality lies at the foundation of all colds. If you have what the doctors call "lessened resistance" you are on your way to trouble.

Dr. Copeland.

You go to a party, dance half the night, and end the affair by filling your stomach with food you do not need and may not even want. The next day you have the "sniffles," and in another day are sick with a cold. You tell your friends you sat near an open window and "caught cold." That is absurd.

A cold is the outward sign of some sort of excess on your part. The time will come when persons who have colds will feel disgraced. Their friends will smile that queer little knowing smile and ask:

"What was it this time?"

In the old days before prohibition no one had to ask why the town "drunk" had delirium tremens. Everybody knew. As popular knowledge of simple medical truths spreads, every one will know why people have colds.

When it is understood that colds result from wrong living--lack of exercise, neglect of the stomach and intestines, bad air and particularly loss of sleep—then society will be ashamed of them. And every one not only will take pains to hide the symptoms, but will so live that he will not catch a cold and thereby disclose the flaws in his methods of living.

If you neglect your body, failing to supply its proper needs with the right food, and to give it the rest and recreation it must have, you will be given a cold as a warning against your bad action.

It is your own fault if you get a cold. Knowing how and why they come you can easily avoid them.

EVER TRY ARTICHOKES?

Some farmers report great success with tuber artichokes for hogs.

Latest High Class Patterns for the Home

Please order the patterns you desire at least two or three weeks before you wish to use them. Desiring to obtain the latest high-class patterns for its readers, THE FARMER has made arrangements to have them sent direct from the east, and under present mailing conditions it takes about that time for them to reach you.

3852. Ladies' dress. Cut in six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. A 38-inch size requires 4 1-2 yards of 44-inch material. Price 10 cents.

3855. Girl's coat. Cut in five sizes: 6, 8, 10, 12 and 14 years. A 12-year size requires 3 7-8 yards of 44-inch material. Price 10 cents.

3440. Junior's dress. Cut in three sizes: 12, 14 and 16 years. A 14-year size requires 4 1-4 yards of 44-inch material. Price 10 cents.

3849. Ladies' dress. Cut in seven sizes: 36, 38, 40, 42, 44, 46 and 48 inches bust measure. A 38-inch size requires 4 7-8 yards of 42-inch material. The width at the foot is a little more than two yards. Price 10 cents.

3866. Misses' dress. Cut in three sizes: 16, 18 and 20 years. An 18-year size requires 4 5-8 yards of 38-inch material. The width at the foot is two yards. Price 10 cents.

3706. Ladies' apron. Cut in four sizes: Small, medium, large and extra large. A medium size will require 2 5-8 yards of 36-inch material. Price 10 cents.

3469. Dress for breakfast or service. Cut in four sizes: Small, 32-34; medium, 36-38; large, 40-42, and extra large, 44-46 inches bust measure. The width of the skirt at the foot is two yards. It will require 7 3-8 yards of 27-inch material for a medium size. Price 10 cents.

3845-3539. Ladies' costume. The waist, 3845, is cut in six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. The skirt, 3539, is cut in six sizes: 24, 26, 28, 30, 32 and 34 inches waist measure. The width at the foot is 1 7-8 yards. To make the dress of one material will require 6 1-2 yards 44 inches wide for a medium size. To make as illustrated will require 3 1-4 yards of figured and 3 3-4 yards of plain material, 44 inches wide. Two separate patterns, 10 cents for each pattern.

3702. Girl's dress. Cut in four sizes: 8, 10, 12 and 14 years. A 10-year size will require 3 1-4 yards of 40-inch material. Price 10 cents.

Which is Larger the Sun or a Cent

"Why—the sun of course" you will say. But remember—you can hold the cent so close to your eye that you lose sight of the sun.

Some baking powders can be bought for a few pennies less than Calumet — but don't hold these cents too close to your eyes—you will not be able to see the quality —the purity—the dependability of

CALUMET
BAKING POWDER

In other words, don't be deceived by a few pennies — the cheapest baking powder in price is often the most expensive.

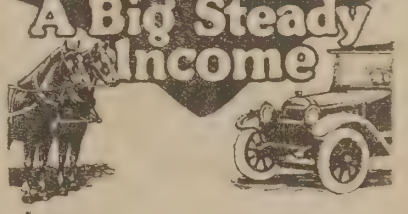
When you buy Calumet you know that it will produce pure, sweet and wholesome bakings. You know that you use less because it contains more than the ordinary leavening strength.

Buy it—try it—be convinced.

A pound can of Calumet contains full 16 ounces. Some baking powders come in 12 ounce instead of 16 ounce cans. Be sure you get a pound when you want it.

Make The Laundress Happy

by making it possible for her to turn out beautiful, snowy white, clothes like new.



Red Cross Ball Blue

will enable the laundress to produce fine, fresh-looking pure white clothes instead of the greenish yellow usually obtained. RED CROSS BALE BLUE always pleases.

5 cents.

At all up-to-date grocers.

Let Your Auto or Team Earn You A Big Steady Income

ACTIVE, energetic men who can furnish team and wagon or automobile can make big, steady incomes, selling McConnon products direct to farm homes.

The McConnon merchant is an independent business man, selling a well-known, high-quality line of farm and home necessities—extracts, spices, toilet articles, household remedies, cooking aids, veterinary specialties, etc.

Big variety—attractive prices—easy sales. No investment in merchandise or previous experience required. We furnish goods on credit—give thorough instructions in selling and co-operation of a strong, long established company *free*. Good territory now open—write for full information and records of McConnon merchants.

IMPERIAL MUSIC SCHOOL-3009 16th St.
Dept. A SAN FRANCISCO-CALIFORNIA

Curtis Rose, Lincoln county, Wash., writes: "It has been a long time since I wrote to you. I am going to school. My teacher's name is Mrs. Franklin. She is a good teacher. I have four miles and a half to go to school. I am in the sixth grade."

Ten-year-old Orven Ware of central Douglas county rides to school three miles with his sister. He says they like their teacher. He has a little pet colt named Dan and a pet calf named Specks. August 11 is Orven's birthday. He is a new cousin.

Birthday Greetings

THURSDAY, January 19—Mildred Gallagher, 8 years old; Carol Smith, 10; Esther Svinth.

FRIDAY, January 20—George Libbey, 10 years old; Bessie Padleford, 10.

SATURDAY, January 21—Jacqueline C. Gifford, 11 years old; Inez Hubbard, 9; Mildred Reynolds, 10; Nina Stringfield, 10; La Rine Kirmamon, 7; Eva Thaden, 9.

SUNDAY, January 22—Genevieve Evans, 11 years old; Pearl Fletcher, 10; Louisa Katzenberger, 9; Floyd Quick, 8; Rex Steiner, 8.

MONDAY, January 23—Theresa Komen, 10 years old; Dolly Matson, 10; John Blake, 11; Ruth Johnson, 9.

TUESDAY, January 24—Doris Gwinn, 11 years old; Laura Mill, 10.

WEDNESDAY, January 25 — Othelia Franz, 11 years old; Alice Larison, 10; Vivilore McDowell, 10; Elsie Reifenberger, 10.

In each issue a list of the cousins' birthdays of the week will be published. At the close of each letter you write be sure to tell how old you are and when your birthday comes.

Bedtime Stories

By THORTON W. BURGESS.
Copyright, 1919. T. W. B.

JERRY MUSKRAT WINS RESPECT.

When Jerry Muskrat had said that the winter would be hard and cold, and that he was going to build a new house and make ready for it, all the little people of the Smiling Pool and the Green Meadows had laughed at him, for it was still summer. So they had laughed at and made fun of Jerry Muskrat, all but Grandfather Frog.

Now Grandfather Frog is very old and is accounted very wise. So when Grandfather Frog refused to laugh, but instead said that Jerry Muskrat knew, everybody else stopped laughing and began to look at Jerry Muskrat with something very like respect. If Grandfather Frog said it was so, it must be so.

One of the Merry Little Breezes blew a foolish green fly almost into the mouth of Grandfather Frog. "Chugarum!" said Grandfather Frog as he smacked his lips and smoothed down his white and yellow waistcoat.

"If you please, Grandfather Frog, how can Jerry Muskrat know anything about the winter when it is such a long, long way off?" asked the Merry Little Breeze.

If Grandfather Frog said it was so, it must be so.

"Why don't you ask Jerry?" replied Grandfather Frog, who had his big goggly eyes fixed on another foolish green fly headed his way.

The Merry Little Breeze danced over to Jerry Muskrat. "Tell us, Jerry, please tell us how it is that you know it is going to be a hard winter," begged the Merry Little Breeze.

Jerry shook his head mournfully. "I don't know how I know, but I do know," said he. "It's down inside. Yesterday I didn't know it. I didn't think anything about winter, and if I had I wouldn't have known any more about it than you do. But this morning, as soon as I was awake, something down inside told me that we are going to have a hard, long, long winter and that I must build a new house. I'm not guessing; I know. Now I guess I'll go look for the best place to build my new house."

Grandfather Frog had been listening all the time, although not once had he taken his eyes off the foolish green fly that was coming his way. Now he made a funny little hop up in the air, the foolish green fly disappeared and Grandfather Frog sat down again with the most satisfied air.

"Chugarum!" said Grandfather Frog, patting his white and yellow waistcoat. "Jerry Muskrat knows because he knows."

"Pooh! Grandfather Frog, that's no reason at all!" cried Little Joe Otter.

Grandfather Frog grinned good naturedly. "I guess you are right," said he. "That isn't much of a reason. But if you really want to know the reason Jerry Muskrat knows, it is because Old Mother Nature whispered it in his ear while he was asleep last night. Yes, sir, Old Mother Nature has whispered the news of what the winters would be in the ears of the muskrats ever since the days when the world was young. Some time, perhaps, I'll tell you how it happens that Mother Nature tells this secret to the muskrats."

"Tell us now!" begged the Merry Little Breezes. But Grandfather Frog shook his head.

And from that time everybody had the greatest respect for Jerry Muskrat.

HAND POWER
K Stump Puller
The Fitzpatrick Products Corp. 99 John St., New York
952 Mission St. Box 32 San Francisco, Cal
Land clearing an easy, one-man job—big stumps pulled clean with this wonderful machine.
Works on any land. Operated by hand! No horses; no digging. Made of the finest steel—guaranteed. Adopted and used by U.S. Government officials and many states. Send for FREE illustrated book on Land Clearing and special offer
ACTUAL PHOTOGRAPH

The Washington Farmer is welcomed just as much by the wives and daughters on the farm as it is by those who hold the plow handles or who drive the big reaper. It devotes articles, pages and departments in every issue to the special field of women. It aims to lighten the work of those who must perform the endless tasks in the farm home, and to carry a word of inspiration and cheer to those who keep the wheels in the farm household turning smoothly.

The "Family Circle," with its constant interchange of experiences, ideas, opinions and methods, becomes more and more popular as the weeks pass.

The friendly interest of our women readers makes them warm adherents of our cooperative plan for securing and renewing subscriptions. Here is the idea. Many publications charge a high subscription price because it costs so much to gather the subscription orders. We eliminate the expensive system of having a force of agents go from town to town and from farm to farm to secure and renew subscriptions. Instead, we ask our friends to send in their own orders at least sixty days in advance of the expiration date stamped on the wrapper of your paper, and to include the orders of friends and neighbors with your own.

You get the benefit of the money saved by this economical plan. You receive this big, entertaining farm and family magazine for five years for only $1.

Continued cooperation is necessary. We hope to make 1922 even more successful for cooperation than the past years have been. Please do your part.

Subscription Rates to The Washington Farmer:

$1.00 for Five Years

25 Cents for 1 Year.
50 Cents for 3 Years.

In Canada add 1 cent a copy for extra postage.

News for Breeders

HAMMOND BUYS BULL CALF.

Dr. P. W. Willis of Seattle reports the sale of a Guernsey bull calf to J. C. Hammond, who owns a Guernsey herd at Deer Harbor, San Juan county. The animal is a few days more than a year old and comes from the Skylark strain. Mr. Hammond intends to use him as a herd sire for his eight head of grades. Dr. Willis is the owner of Sammamish Topsy, an aged cow who produced 16,526.3 pounds of milk and 831.58 pounds of fat, which is the highest for the breed on the Pacific coast.

GUERNSEY FOLK MEET.

Members of the Orcas Island Guernsey Cattle club met at Doe Bay in the latter part of December. Mrs. S. P. Davis, director of the Washington State Guernsey Cattle club, told of the benefits of the state and national Guernsey associations and of the proposed work in the county for the coming year. W. W. Henry, the county agent, urged the value of testing records in the upbuilding of a dairy herd.

MULHALL & SON WILL SELL.

Forty head of registered Shorthorn cattle, a number of Percheron horses and some farm machinery will be sold at auction by William Mulhall & Son at their headquarters on the California ranches, near Buena, Wash., on February 14.

VETERINARY

By DR. S. B. NELSON.

For Caked Udder—What is good for a cow's udder that has been caked on one side for four weeks. Nothing I put on seems to soften it. J. M.
Wauconda, Wash.

Apply the following liniment to the affected quarter of the udder after each milking: Tincture of iodine, three ounces; soap liniment, five ounces. In addition, bathe the quarter before milking and give it a gentle massage for about five minutes.

Gives Stringy Milk.—I have a cow that gives lumpy and stringy milk. The milk tastes bitter. I just bought her, so do not know when she will be fresh. She gives two gallons of milk a day. She runs on clover and alfalfa pasture and I feed alfalfa hay mixed with wheat hay and it has some weeds in it. I feed a little bran and shorts twice a day. W. J. G.
Opportunity, Wash.

Give your cow one and one-half pounds of epsom salts in three quarts of water. Two days later begin giving a tablespoonful of phytolacca in a pint of water for some 10 days to two weeks.

Side Bones.—I have a 3-year-old pony that has a swelling on both of his front feet around the hoof where the hoof touches the flesh. On his left hind leg he has a lump above his hoof where it touches the flesh. What is the matter?
Weber, Wash. J. W.

It is quite possible that your pony is affected with side bones. You might apply a blister to them and later on paint around the hair line with the following preparation: Lard, one part; pine tar, one part. Melt the lard and mix in the tar. This application should be made night and morning.

Intermittent Fever—I have a pair of 3-year-old mares that weigh 1600 each that have been sick for two months. They first take with a high fever, 104 to 107. I was told to give aconite and belladona alternately, so that took the fever down, but it comes back in a week or 10 days as bad as ever. It has done that four times. They breathe hard, but eat heartily and keep in good flesh. Who is the state veterinarian?
Naches, Wash. A. H. W.

Your horses may be affected with intermittent fever. I would suggest that you have your local veterinarian examine the horses and advise you. There may be something in these cases which you have not observed that a trained man would see. The state veterinarian is L. C. Pelton, Olympia, Wash.

The Last Call
Kin-Son Stock Farm Big Attraction Sale of Bred Sows
Nampa, Idaho, Tues., Jan. 31, 1922
Forty head of tried sows, yearling and spring gilts. An offering of rare individuality and breeding, including some of the most valuable breeding matrons.
This offering is bred to PARAMOUNT, a son of the $60,000 "The Picket" and grand champion of Idaho, in 1921; and "WONDER TIMM," by Severe's Big Timm, by the Champion Big Timm.
The wonderful sow, Miss Melbourne, the dam of our 1918 sow litter, sells: Three great full yearlings by Paramount, two of them junior champions of two shows and their dam, Miss Chief, by Bob's Chief, by Big Chief, sell.
One great fall yearling by Paramount and out of Miss Melbourne, a real 900-pound sow at maturity, sells.
Three super-attractions by Paramount, of March; three farrows out of the Great Big Lady, by Great Big Buster; these won first and second in Idaho futurity and are good for next year's junior yearling futurity.
One real spring gilt by Paramount and dam by Lee Buster, by Great Buster; a real gilt by The Peril, by The Pilot, bred to Paramount, and one by Murphy Liberator, bred to Paramount.
Paramount Sells
We are going to offer Paramount, the greatest Poland China boar in the west, grand champion of Idaho, at this sale. If you want the best, come and buy him to head your herd.

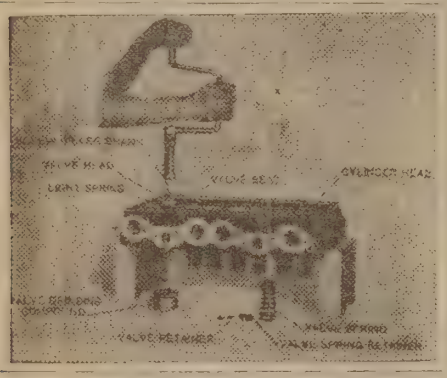
Overhauling Motor

HOW TO GRIND THE VALVES.



By PROFESSOR L. J. SMITH, W. S. C.

Ordinarily the valves should be ground twice a year. They may not require much grinding, but it is only a three or four hours' job and the increased power and fuel economy certainly justify the time spent on this overhaul. Crank over your motor slowly by hand after it is warmed up, testing the compression in each cylinder. Bring each piston up on compression, then ease off on the starting crank, and the piston should come back smartly against your reduced pressure on the

crank handle. If either the intake or exhaust valve is not seating properly there will be little or no compression.

The first step is to take out the valves and thoroughly clean both the head and the stem. Sometimes there are caps above each valve, which are unscrewed to take out the valves and get at their seats. More often it is necessary to remove the cylinder head. Often the valves are in the head itself. Remove any wire edge from the head with a file; polish the valve stem with a bit of emery cloth or fine, oily sandpaper; put valve back in place and see that it moves up and down readily. If it is not already done, mark each valve with a center punch, beginning with the front valve and marking one punch for one, two punch marks for two, etc. Next examine the valve seat; it may be necessary to use a round file to remove a wire edge there. If the valve seats fairly well on the beveled surface use only the fine grinding compound. Put a very little of the compound on the face of the valve and replace it, first putting a light spring over the stem, so as to raise the valve off the seat when the downward pressure is removed. Then, with a brace and

shank (see illustration) oscillate the valve, at the same time pressing it lightly against the seat, and every few seconds raising the valve from the seat and turning it slightly to a new position. Next rotate the valve continuously, as it would cut grooves in the seat. Continue the grinding, renewing the paste sparingly until there is a bright, even polish the entire circumference of the leveled valve and the seat. The whole width of the leveled surface, however, need not fit against the seat.

When the grinding is completed the valve, seat and guide must be carefully cleaned, using gasoline and wiping dry. Put cylinder oil on the valve stems and slide them into their respective guides, then replace the valve springs. Then you are ready to replace the cylinder head.

After grinding the valves the push rods, which are actuated by the cam shaft, thus opening and closing the valves, are usually a little too long and will not allow the valve to seat properly. Each make of motor requires a definite clearance, which is specifically stated in their instruction book. If the motor has overhead valves the clearance is measured at "A" (see illustration) between the end of the rocker arm and the top of the valve stem. It is better to have a little too much clearance than not enough. In the Ford motor the proper clearance is gotten by grinding off the end of the valve stem. The thickness of a piece of writing paper (about 3-1000) is ample for many motors The clearance is usually measured after the motor has been warmed up.

The Dirty Spark Plug.

This trouble is very annoying. A spark plug becomes foul and the motor runs on three of the four cylinders, for the electricity is no longer jumping the gap between the points of the plug; but is getting across through the carbon down in the plug. The result is that the motor only develops three-quarters its usual power, the gasoline consumption is excessive, and one has to go into "intermediate" when he should be climbing the grades on "high."

This trouble is caused by several things: oil too high in the crank case, poor oil, going up or down a long, steep grade with a little too much oil, or loose fitting pistons and weak, poor fitting or broken rings.

A motor that has a good compression usually runs with clean spark plugs. Many cars will run months at a time without touching a spark plug.

Unscrew the plug and fill it with gasoline then scrape out the carbon with an end of a small cotter pin. Blow or take out any loose pieces of carbon. Be sure that the points are clean and that they are the proper distance apart—about the thickness of a worn dime. Don't screw the plug into the cylinder very tight. It is not necessary and only brings an extra strain on the plug.

Farmers' Cooperative Plan Big Winner in 1921

Let's Make 1922 even More Successful

It will be a source of pride and gratification to every friend of cooperation, that The Washington Farmer's cooperative subscription plan has been a big winner in 1921, just as it was in previous years.

We said to our readers: "Send your subscription orders direct. Get your neighbors to do the same. We will give you and your neighbor the benefit of every penny which would ordinarily go to the agent handling the subscription." The idea met with instant and widespread response. Readers in every nook and corner of the state did their share. The cooperative plan in subscription getting was demonstrated to be WINNER.

However, in looking forward to the great amount of subscription business which must be attended to in 1922, we are reminded that "to stand still is to go backward." "A field has to be persistently cultivated or it will grow up to weeds. We must keep the pump handle going up and down or water will cease flowing from the well."

The same with our cooperative subscription plan. Its success could not continue if our friends and the friends of cooperation should cease their efforts. Every one has a part to play, and should do his share.

We have every confidence that you will continue to cooperate and repeat our request that you take thought as to your subscription renewal. Instead of waiting for a notification, mail in your order at least 60 days in advance of the address label of your paper. Tell your friends and neighbors about our cooperative plan and include their orders with your own. By all pulling together we can and will make 1922 a big year for cooperation. Let's do it!

Subscription Rates of The Washington Farmer:

$1.00 for Five Years

25 Cents for 1 Year.
50 Cents for 3 Years.
In Canada add 1 cent a copy for extra postage.

SUCCESSOR TO

Vol. 46. No. 4 THE RANCH PACIFIC DAIRYMAN HORN AND HOOF January 26, 1922

For Good Farming, Attractive Country Homes and Happy Country People

Letter to the President

Price Leveling Is Now the Most Outstanding Need of American Agriculture

The Washington Farmer has written a letter to President Harding on the present critical conditions in agriculture, pointing out what it feels to be the most urgent needs of the farmer today. The same needs are emphasized in personal letters to the delegates to this week's agricultural conference in Washington and to all members of both houses in congress. The letter to the president follows:

Jan. 17, 1922.

The President,
The Executive Mansion,
Washington, D. C.
Sir:

In behalf of the producers, not only of our own Pacific northwest, but of the entire country, we wish to commend you for calling the agricultural conference, through the secretary of agriculture.

This conference will mean much to the farmers and to the country at large if it gets down to basic problems and acts upon them vigorously, and if congress and other governmental agencies and departments follow its findings with judicious and equally vigorous action.

As long as present agricultural conditions remain, increased production can only bring increased burdens to the producers.

With these thoughts in mind, the Pacific Northwest Farm Trio, consisting of The Washington Farmer, The Oregon Farmer and The Idaho Farmer, has taken the liberty of urging upon the delegates to this conference and upon others in high positions the following points which it deems to be fundamental and vital:

(1) The most outstanding need of the hour is price leveling—the bringing up of the farmer's price or the bringing down of the other fellow's. The farmer's need of credit is due to the present inequality of prices, and credit will be supplied when the price inequality is removed. Price equalization is imperative if the world is to continue to eat and be clothed.

(2) Present freight rates are ruinous to agriculture and are detrimental to industry at large. They should be promptly reduced.

(3) The farmer is entitled to protective tariffs commensurate with those enjoyed by the manufacturing industries.

(4) With large exports of American breadstuffs during the past calendar year, the price to the farmer here has been, in many cases, below the cost of production and seldom equal to this cost plus a living profit. This situation deserves searching investigation. The entire export field needs far-reaching and scientific development for all farm products.

(5) Any and all doubts as to the legal right of farmers to market their products through cooperative associations of their own formation and under their own control should be swept away by clear-cut national legislation.

Wishing to assure you of our desire to be of the greatest possible service with you to our country's agriculture, I have the honor to be,

Yours most respectfully,

(Signed) EDWIN A. SMITH,
Managing Editor.

Causes of Unemployment

Disturbance of Equilibrium Between Agriculture and Industry Is a Serious Matter

By the call of the president there was lately held an unemployment conference. The great Hoover was the moving spirit and doubtless remedial measures will follow. But the remedies are mere expedients: Artificial improvements for the sake of giving temporary employment; public works and highway construction undertaken out of season or ahead of the demand, so as to create work. Expedients to maintain the self-respect of the needy and yet do a charity.

The deeper causes of the unemployment receive little attention.

The disturbance of the proper equilibrium as between agriculture and industry in such a country as ours is a serious matter and hard to remedy when the balance has been disturbed. It has been greatly disturbed through a long series of years and by artificial means.

The industries were made profitable beyond the mark by preferential legislation. Wages far above the competitive power of agriculture were established.

The instantaneous and high return to the laborer for his share in production and the quick gratification he could receive by spending his wages to supply his wants tipped the balance so that too many moved over to the class of wage earners.

Then the penalty follows through days of unemployment and want. Then the insistent demand that the government must in some way supply the deficiency follows.

The agricultural worker, who knows that days and weeks must elapse before his product is ready for use, has the constant admonition of care against over-spending, lest weather and markets may yield a less reward than he hopes. But when the depression does come he is in better shape than his wage-earning brother. His surplus has not slipped away so easily for picture shows and frolics and geegaws for the weaker sex. "Take no thought of the morrow" has been the dictum of the wage earner, but not of the farmer. Then when the hard day has come, there is for the latter no insistent landlord, saying, "Pay up or get out."

There is a store of potatoes in the pit and apples in the cellar, and cabbages and turnips and parsnips. There are chickens which may bring a little cash as well as meat. There are some pigs and a calf or a cow for meat, and the months when little cash circulates are not, after all, months of sharp want and dread of the future. And then there is always much labor, profitable labor, which may be done on the farm, where reward will surely come later. The farmer is a happier and a safer man, in a position where he can withstand a siege, if necessary.

The sharp driving force of necessity for the wage earner in the city when he is out of work and, of course, out of money, is a fierce thing to endure.

Nature is severe in her remedies. But she will teach America that she has gone too far in her preferential treatment of certain forms of industry and that she must restore the equilibrium by moving in the other direction.

E. A. Bryan

Whose Judgment

Shall Help Out American Farmer?

In one of his preliminary announcements of the national agricultural conference at Washington, D. C., Secretary Henry C. Wallace of the department of agriculture says: "It has been the aim to get people who know farming and also those who have judgment in helping the farmer get out of his difficulty."

The farmer is in difficulties. Everybody acknowledges that.

The difficulties of farmers are far reaching—almost everybody is finding that out.

When the farmer prospers the rest of the country prospers. This has come to be almost an axiom.

But when we come to those who have "judgment" in "helping" the farmer, we get into the region of a debate.

There is no debate over the fact that the farmer needs help and plenty of it to get out of his present difficulty, but on whose "judgment" should he rely in getting out of those difficulties?

For the past two or three years the financiers have been exercising their "judgment" in "helping" the farmers. The railroad people have been doing likewise. The wool dealers and the woolen manufacturers also have been exercising their "judgment" in "helping" the farmers out. It is high time that the judgment of the farmers themselves should be consulted in this matter. There are farm leaders today whose judgment is worth considering. Take such men as James R. Howard, president of the American Farm Bureau federation, or S. J. Lowell, master of the national grange, or Charles Barrett, president of the National Farmers' union. There are farm folks of judgment and ability in every part of the country who are capable of rendering good counsel. By birth and environment Secretary Wallace himself is in a position to render helpful aid to the farmers and his farm paper has been doing this, lo, these many years.

What is needed is a righteous compromise between the "judgments" of the great conflicting interests of the country, in which compromise the farmer shall have a square deal.

No, the farmer does not stand today in great need of the judgment of bankers, of railroad men, of manufacturers or of city people generally. He is in need of their help just as they are in need of his help in carrying ut their own best judgment about their own various interests.

It is to be hoped that when the final results of the national agricultural conference are made known that there will not be too much "judgment" and too much "help" injected into its conclusions by other than that of the farming industry itself.

Cattle and Barn Burn

Fire caused the loss of the large cattle barn and 23 head of Guernsey cattle owned by Carl F. Kunzman, who lives six miles northeast of Bellingham. The fire occurred during a heavy gale and it was impossible to fight the flames. Forty tons of hay and all the farm machinery, as well as a few tons of feed, were destroyed and the loss is estimated at approximately $10,000. The barn was built this year and was insured for $1400 and part of the live stock was covered by insurance.

Contracts Bind

Dairy Association Sustained

That a true cooperative association is built upon a firm foundation and the binding contract for the delivery of products to that association has power to hold its signer to his bargain was proven by a decision which has recently been handed down by Judge Hewin of Chehalis. The case was brought up December 15 by the Lewis-Pacific Dairymen's association against Price Frame, a Lewis county farmer, who was temporarily restrained from selling milk to other buyers. Mr. Frame appealed the case and it was brought before Judge Hewin after the defendant had filed an affidavit of prejudice against Judge W. A. Reynolds, who was to have tried the case.

After the hearing on January 12, which was attended by an unusually large audience, Judge Hewin took the case under advisement until the following Monday, when he gave his decision in favor of the association, thus enjoining Frame from selling his milk to other than the Lewis-Pacific Dairy association.

The decision is considered a great victory for the cooperative association whether it be organized among dairymen or other producers so long as they include a binding contract. Since the case was the first of its kind to be brought by the dairymen's associations of the state to enforce their milk contract with the stockholders and members, it is accepted as a test case.

The attorneys for the association were H. E. Donohoe of Chehalis and W. H. Abel of Montesano, while Gus L. Thacker of Chehalis represented Mr. Frame. It is interesting to note that Judge Hewin was the jame judge who tried the "cranberry case" more than a year ago, when the cranberry association was granted an injunction against one of its members for a similar breach of contract. The judge's decision was later confirmed by the state supreme court to which the defense had appealed.

The history of the case shows that Frame began shipping to the Chehalis plant of the Lewis-Pacific Dairymen's association in April, 1921, but soon became dissatisfied and refused to deliver any more milk under his contract, but thereafter sold his product to other buyers.

With regard to this binding contract with dairymen's associations, Oscar G. Eaton, a member of the Pierce County Dairy association, writes:

"We have had the same difficulty to contend with in the Pierce County Dairymen's association, as some members are so short-sighted they can not see anything but immediate results.

"They forget the old days when we used to pay our own freight, after hauling to the depot, and accept sour cream prices and the weight the other fellow was minded to give us.

"We have entreated, cajoled and done everything to bring some of these members into line, yet without apparent result.

"The good of the many should not suffer because of the fault of the few. The time has now come for more drastic action."

The Cover Page This Week

The Barred Plymouth Rock shown on the cover page of this week's Washington Farmer is one of the good birds of the flock of R. H. Sanderson of Seattle, a prize winner at the recent Seattle show.

Fair Price at Farm

Authorized by the agricultural bureau of the Spokane Chamber of Commerce, a committee consisting of W. T. Day, chairman; E. A. Smith, editor of The Washington Farmer, and F. A. Garrecht, counsel for Northwest Wheat Growers' Associated, has sent the following telegram to Henry C. Wallace, secretary of agriculture, Washington, D. C.:

We commend the president and yourself for bringing about the agricultural conference to consider the pressing problems of the farmers.

We submit that there can be no remedy for the difficulties of the producers of farm products until a fair price of such products is received at the farm, and means must be devised to stabilize such prices.

THE WASHINGTON FARMER

Subscription price: Five years, $1.00; three years, 50c; one year, 25c. Canadian, one year, 75c. Foreign, one year, $1.25.

OUR GUARANTEE TO SUBSCRIBERS.

Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unused portion of the amount paid for the subscription will be refunded. You must be satisfied.

Entered as second-class matter, January 13, 1915, at the postoffice at Spokane, Washington, under the act of March 3, 1879.

GUARANTEE OF ADVERTISEMENTS

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible bankrupts. Complaints must be sent to us within 30 days from the date of the transaction and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of diseasee in stock sold through these columns.

A Farmer on Reserve Board.

The passage of the Kellogg-Smith bill in the senate by the overwhelming vote of 63 to 9 marks another sweeping victory for the agricultural bloc. This bill provides that the agricultural interest shall have a spokesman on the federal reserve board.

THE FARMER, however, has no fear that the agricultural bloc of 20-odd senators will become a permanent party in congress. The American farmers needed a champion, and the senators who constitute this bloc came to their call in an hour of dire need. When that need has passed, the agricultural bloc will dissolve and we shall see a return to the old party alignments.

It is one thing to oppose the permanent formation of parties along class lines. A good deal can be said in opposition to that departure from the traditions and practices of government in this country. We can readily understand that the national welfare would suffer if congress were made up of "blocs" of conflicting interests—one group fighting always for organized labor, another for the organized farmer, another for the organized railroad interests, another for the bankers and yet another for the commercial interests. But the coming together of a considerable number of senators and representatives, drawn into united action spontaneously by an overwhelming menace to the agricultural interests of the nation is another proposition.

We think we know the heart and purpose of the farmers of this country. We know it is not their desire that they should have special or preferential treatment by the government. They want only such regard for and consideration of agriculture as will be of benefit to the entire nation. The fact that the purchasing power of the American farmers has been cut down $8,000,000,000 in two years, as reported by Secretary Wallace, is conclusive proof that the slump in prices of farm products was an injury not only to the American farmer, but a deep injury to the nation.

Offers Remedy for the "Pest"

In a recent issue there appeared on this page an editorial entitled "A Pest Hard to Combat." This pest was described as "the fellow in a fruit-growing district that fails, either through negligence or intent, to combat the enemies that infest his orchards." He is the fellow who does not spray for codling moth, who allows blight to run riot in his own orchard to infest those of his neighbors, who neither traps nor poisons the gophers and the mice that are destroying his own trees and making his business a failure, and who refuses to become a part of the community organization for the united stand against all manner of ills that affect the fruit-growing industry.

Comes now a reader who admits that he qualifies under the above description. But he gives a remedy to control himself and his fellows who have neglected orchards. Here it is in his own words:

Let your live orchardist go to that man and say: "See here, let us take care of your trees, under contract, for three or four years. We will spray, prune, cultivate, gather and pack the fruit for a share or a price per box to be agreed upon." How many men would refuse, if rightly approached? Why, a man who came to me with an offer like that would not have to speak twice to get (150 per cent?) of the first year's crop. Really, I have often wondered why some skillful horticulturist does not engage to take care of all the run-down orchards that he can handle. It looks to me like an opening for the right kind of man, and it would be much more successful than our present law of compelling spraying or destruction of the orchard.

A run-down orchard is much like a run-down machine. It is hard to repair. A tree must be carefully pruned from its very first year until maturity, and thereafter, if it is to be a producer of first-class fruit. Trees that have been subjected to the ravages of all manner of pests for several years are in many cases almost, if not quite, beyond redemption. The orchard that is permitted to become the seat of serious fruit diseases can in only exceptional cases be redeemed. The development and care of an orchard is the process of a lifetime, not of one season.

Our original editorial was not meant in a personal way toward any one. Nor is this restatement of the case so meant. Nevertheless, we are of the same opinion still: That the man who allows his orchard to go to rack and ruin, the victim of pests and diseases, is a serious menace to the orchard industry, and one harder to combat than blight and codling moth.

"Give Me the Water"

The agricultural engineering specialist of the Missouri extension service recently installed in a Missouri farm home a sink, tank, water front and piping, bathtub and piping in a room adjoining the kitchen at a cost of $95.

When the demonstration was finished the farm housewife, with tears in her eyes, put her arms around the home demonstration agent and said: "Jimmy and I owe this all to you because we never would have believed we could afford it if we had not seen the demonstration given at the church last summer. I have waited 30 years for this."

The editor of The Washington Farmer recollects visiting a farm home in the highlands of the Big Bend section some years ago. It was one of the best diversified farms in that part of the state. Eleven children had been raised in the family and all the water used on the place for stock as well as for family use had been hauled for quite a distance. The house, though comfortable, was lacking in modern conveniences. Finally the time came when by the most careful prudence a sum of money had been saved. The question was put up to the good housewife whether that money should be expended in remodeling the house or in getting water, pumped by a windmill and forced through a long line of pipe into the house. The one would be about as expensive as the other.

"Give me water," said the housewife and at the time of the visit there was certainly a look of contentment on that good woman's face.

Patronize Reliable Dealers

One could fill up the columns of THE FARMER with gold brick stories of all kinds. The crop of schemers and the folks who are enticed into getting something for nothing or getting a good deal for a little seems never to fail.

A story now comes from California that a poultry-keeping concern has imported a Chinaman who is said to have the gift of being able to determine the sex of a day-old chick and is selling the pullets at a good price, while it turns over the culled out chicks to another firm, who in turn sells them as ordinary day-old chicks, which are found to contain only 10 per cent pullets.

The old advice is never out of date, to take extra pains to find out reliable dealers and to patronize them.

State Farm News

Open house was held by the poultry department at Washington State college, Pullman, January 14, when the new plant, which replaces the one destroyed by the windstorm last year, was opened for public inspection.

A new candling room is part of the plant. In one room was an exhibit of fresh eggs. Piled on a table was exhibited the amount of food a chicken consumes in a year.

Thirty birds dressed for exhibition by students were displayed, together with two chicken "curiosities," one a cross between a bantam and a Chinese pheasant and the other a cross between a Barred Plymouth Rock and a Chinese pheasant.

* * *

Miss Ruth Cresswell of Kennewick, graduated from the department of home economics at Washington State college last year, has resigned as assistant state leader in charge of girls' club work to accept a similar position in Michigan. She has left for Marquette, Mich., where she will make her headquarters.

* * *

Development of a 10,000-acre irrigation project in Okanogan county, near Riverside, is being pushed by Okanogan residents. According to present plans, it is proposed to tap the Okanogan river at a falls about six miles above Riverside to obtain the water supply. A preliminary survey indicates that the dam at this point would produce 2000 horsepower to be utilized for lifting water 50 feet into a main canal which would supply the area which it is proposed to reclaim.

* * *

A cow-testing association is soon to be organized in Lewis county.

* * *

Twenty-seven thousand two hundred acres cropped on the Tieton project this year brought gross returns of $3,166,411, an average of $116.40 an acre, according to the annual report of J. L. Lytel, head of the United States reclamation service at Yakima. Apples, the most valuable crop, realized $2,059,830 from 7160 acres. Alfalfa on 13,350 acres was worth $368,964, at $9 per ton. Other large crops were peaches, pears and potatoes.

* * *

The Bushnell farm, consisting of 432 acres on Lake St. Clair, on the Yelm road, about 10 miles southeast of Olympia, has been sold to James B. Howe of Seattle. It is one of the finest places in Thurston county and is a part of the William Habard, William White and Eaton donation claims.

* * *

The combined shipments of fruit, grain, stock and mixed agricultural products from the Pateros district in 1921 were the largest ever made. The principal shipments were of apples, of which 600 cars have gone out, with some stored quantities yet to be forwarded. The stock, wheat and other products have exceeded 400 cars and are not yet finished.

Pateros is the confluence of rail transportation for the Methow valley, which lies to the west, and the upper Columbia river region to the east.

* * *

The Western Washington Horticultural association will hold its 12th annual convention at Mount Vernon, commencing Wednesday, February - and lasting four days. The following committee was appointed to arrange a program: Chairman, C. W. Orton, Sumner; J. L. Stahl, Puyallup; E. A. Bartell, Puyallup, and L. M. Hatch, Alderton.

* * *

Approximately 7,000,000 feet of timber was blown down and otherwise uprooted during the storm period on the upper Skagit, Sauk and Suiattle rivers, according to word received at the office of the forestry service at Bellingham.

* * *

Kansas may lose its sunflower prestige when the results of C. B. Sherwood's experiment with this flower become beter known. As an experiment he planted a quarter acre on gravelly soil on his Satsop farm to this crop last summer. The big flowers grew amazingly and he harvested 9300 pounds, or at the rate of 18 tons to the acre. His cows seem to thrive on the diet. Other farmers will plant sunflowers this year.

* * *

Vegetable growers of Kelso and vicinity met recently at Lee & Grim hall and after hearing talks by M. J. Newhouse of Vancouver and County Agent T. Y. Blanton appointed the following committee to make plans for organization: Andrew Olson, chairoan; Sherman Vogel, Floyd Carroll, W. B. Ramsay and R. L. Wilkins.

* * *

Increased interest in poultry is being reported from the Montesano district. A Montesano breeder sold 4000 day-old chicks in this section last year. Already he has received orders for 14,000 chicks for spring delivery. John E. Hill is building a chicken house 20 by 110 feet on property he has purchased just east of Montesano. E. C. Roberts, a Satson rancher, will build a similar house soon on adjoining land.

* * *

The annual value of farm products in Pacific county has been increased from $500,000 to $750,000 in the last few years, and County Agricultural Agent Beck will try to get it nearer the $1,000,000 mark in 1922. Lumbering has so eclipsed farming that, although there are large areas of good farm land in the county, agriculture has suffered. The principal work planned for this year is drainage and farm sewage, dairying, crops, soils, horticulture, poultry, clothing and home management and boys' and girls' clubs in dairying and poultry. Nine communities will participate in the work: Brooklyn, Frances, Willapa, Menlo, South Fork, South Bend, Naselle, Wallicutt and Long Beach.

Coming Events of Interest

Jan. 25-27—Grain growers, shippers, millers, Spokane.
Jan. 30-Feb. 3—West. extension conference, Portland, Or.
Feb. 2-3—North Pacific Fair association meet, Spokane.
Feb. 6—Holstein sale, Granger.
Feb. 6-7—Davis and Butchart Bros. Holstein sale, Granger.
Feb. 7—Berry growers' meeting, Puyallup.
Feb. 10-11—Pierce county Pomona grange, Puyallup.
Feb. 14—Yakima Guernsey Cattle club, Yakima.
Feb. 15-17—W. Walsh. Horticult. Ass'n meet, Mt. Vernon.
Feb. 16-18—Farmers' short course, Parma.
Feb. 20-21—West. Royal breeders' swine sale, Spokane.
Feb. 22—Shorthorn breeders' spring sale, Spokane.
Feb. 23—Day & Rothrock Shorthorn sale, Sprague.
Feb. 24—A. D. Dunn Shorthorn sale, Wapato.
March 7—Holstein-Friesian annual meeting, Seattle.

FARM BUSINESS AND MARKETS OUTLOOK

A surfeit of steers in little better than feeder condition is universal complaint.

An increase of nearly 25 per cent in hog supply at leading markets was absorbed on an ascending scale of prices which reached the highest level in over four months.

Top lambs at Chicago reached across the $13 line.

The mule market is showing more life.

The advance in the wool market is still unchecked.

An increased quantity of wheat has been absorbed by the mills.

Argentine wheat is being forced upon the export trade at prices below a parity with North American wheat.

Slight rise in the price of hay.

Consumption of eggs has been heavy throughout the winter..

Downward course in butter prices.

CATTLE MARKET EASILY OVERLOADED

Cattle prices trended slowly upward last week only to sag again later. A fortnight of light runs has cleared eastern dressed beef channels of their pre-holiday accumulation but the saturation point is soon reached and there is no prospect of supply contraction in the next six weeks sufficient to lift prices to a much higher level. Bare spots may begin to show up by the middle of February which will result in price appreciation as beef consumption is at low ebb and changes on that side of the market are altogether likely to be in the direction of increase.

A surfeit of steers in little better than feeder condition is universal complaint, which suggests that holding such cattle until later in the season may work out advantageously.

Butcher cows and heifers and bulls are less numerous than a month ago, but as long as warmed up steers are plentiful, independence in price trends is out of the question. The veal calf market is erratic as usual with eastern points holding on a relatively high basis.

IS STOCKER SCRAMBLE COMING?

Advance reminders of the usual spring scramble for thin cattle to go on grass are furnished by orders at Chicago from Wisconsin graziers and a few transactions closed in the southwest at a date much earlier than usual. These may have involved drouth stricken cattle. The supply of aged steers which can be moved to Kansas pastures from Texas is said to be only 70 per cent of the number purchased last year. If the season is favorable, restocking in the northwest is anticipated, but the losses of the last few years, the narrow margin between feeders and fat cattle and the fact that money is none too easy will temper enthusiasm and may restrain stock cattle prices from an extreme advance during the spring months. Those who want to anticipate any such rise in values can scarcely hope to make purchases in the next two months much below prevailing levels.

HOGS HIGHEST IN FOUR MONTHS.

An increase of nearly 25 per cent in hog supply at leading markets during the last 10 days was absorbed on an ascending scale of prices, which reached the highest level in over four months on the best day, the Chicago average rising to $8.15. Shipping trade is as insatiable as at any time in the last six weeks while packing houses, crippled during the strike, are now on a nearly normal basis at most points.

Good sized runs respond to the bait of high prices so that not all of such advances is held. A liberal supply until early March and even longer is a reasonable certainty, but if hog meats continue to disappear into distributive channels as they have in the last 10 weeks there need be no further fear of $6 hogs at Chicago this winter. The farther the season advances, the more legitimate the appearance of such bulges as that of last week.

With prices of lard and salted meats below a parity with hogs and with fresh pork trade booming, packers have had no incentive to store product. The season is now far enough along that efforts to accumulate reserves for sale during the late summer period of light runs will help to sustain the hog market. That no new high record stocks like those of the two preceding years will be piled up is a foregone conclusion.

COLORADO LAMBS ON HORIZON.

With top lambs at Chicago across the $13 line, the market seems to have discounted most of the bullish factors, although the market remains in a bullish position and further advances are not impossible. A few Colorado lambs are coming to Chicago and Kansas City and the real movement from that quarter is due soon. Colorado feedlots are not nearly so well-filled as a year ago, but there should be enough lambs to prevent much further price aviation. Eastern shipping demand at Chicago last week was the broadest in months. With the dressed lamb market higher, prices mounted to the highest point since December, 1920, in spite of an increased supply.

A year ago last fall feeder lambs were purchased at prices so high that huge losses were inevitable owing to the subsequent course of the fat lamb market. Feeder lambs for a time brought as much as fat ones, increasing the returns of producers of thin western handsomely. This year the tables have been reversed. Lambs bought as feeders a few months ago at $5.25 returned last week and brought $13.

HORSE MARKETS MIXED.

Most of the recent improvement in demand for horses at Chicago disappeared last week and prices in some cases are $10 to $20 per head lower at that point, while St. Louis reports an active trade. Runs are liberal with eastern buyers the principal support, although the south is buying a small quota of cheap horses. The mule market is showing more life and a large run was cleared at St. Louis last week, while at Kansas City prices advanced about $10 in two weeks, although all the gain was not maintained.

WOOL PRICES AGAIN HIGHER.

The advance in the wool market is still unchecked. Prices are up about 10 cents a pound above the low point of the season reached in mid-summer. Sales in London, Antwerp and various points in Australia and New Zealand were at higher prices than the preceding auctions so that the loss early in December has been recovered. South American wool markets are in an excited state with prices higher and Americans buying. Some American buying has been in evidence at London. In this country manufacturers have been obliged to buy at the advance in order to fill out their requirements and talk of scarcity is becoming more prevalent. Unsold stocks of wool at Boston on December 31 were reported to be 63,542,000 pounds compared with 139,602,000 pounds on the same date last year. Latest reports point to a permanent tariff of 30 cents per clean pound. Woolen goods trade sentiment is not optimistic, but lower prices upon cloth are not anticipated.

The Boston market is quoted as follows:

Wisconsin, Missouri and average New England—1-2 blood, 36@37c; 3-8 blood, 34c; 1-4 blood, 31@32c.

Scoured basis: Oregon—Eastern No. 1 staple, 93@97c; fine and fine medium cloth combing, 85@90c; eastern clothing, 73@75c; valley No. 1, 80@82c.

Territory—Fine staple choice, 95c@$1; 1-2 blood combing, 80@85c; 3-8 blood combing, 60@65c; 1-4 blood combing, 53@55c; fine and fine medium clothing, 75@79c; fine and fine medium French combing, 62@65c.

FLOUR MILLS NEED WHEAT.

Although demand for wheat from mills failed to show the urgency expected after the first of the year, there has been an increase in the quantity absorbed by them. Their stocks of wheat are reported to be very light for this season of the year. A strong domestic statistical position in the wheat market is largely offset at the present time by the large supply in commercial channels and by the pressure of Argentine wheat upon the European market. Wheat prices have been holding within a narrow range so that flour buyers see no cause for anxiety and are purchasing but little more than needed for immediate requirements. Concerted efforts to reduce the retail price of bread have tended to confirm this attitude. If the price of wheat should show a tendency to advance, it is not impossible that flour buyers would begin to anticipate their wants for several months ahead.

It is estimated that the Pacific coast states have around 37,000,000 bushels of wheat for export and for carryover. In the northwest about 15,000,000 bushels of durum, which must largely be exported, are still on hand. Deducting these amounts it is believed that milling grades have been heavily over exported from east of the Rocky mountains. If a deficit is actually being created, imports from Canada are expected instead of shipments eastward out of a surplus along the first of March.

ARGENTINE WHEAT DOMINATES EXPORTS

Argentine wheat is being forced upon the export trade at prices below a parity with North American wheat. Germany and Portugal have been the principal buyers. Most of the sales have been for deferred shipment. Although port receipts from the Argentine interior have been smaller than expected, growers have been selling more freely in the last week or two. This may be only a temporary spurt, as the temper of the Argentine growers is not yet fully known.

Sales from the Australian surplus have not been reported recently, but official estimates upon the crop yield indicate a smaller outturn than last year.

Although Argentine wheat is receiving most attention abroad, about 5,000,000 bushels of Canadian wheat have been sold in the last few days for Russian relief and to Greece. About 1,300,000 bushels of durum were sold to be sent to Russia for seed and the Pacific northwest reported export sales of 300,000 bushels. The market has made little or no response to this demand, showing the extreme apathy of speculative buyers.

An eastern statistician has calculated that world's imports of wheat in the last six and one-half months have aggregated 40,000,000 bushels, or over 8 per cent, more than in the same period a year ago. Large takings by non-European countries have been a prominent factor in this increase, as they amount to about 25 per cent of the total. Several European countries, however, including United Kingdom, Italy, Germany, Holland, Portugal and Greece, have taken more wheat thus far than they did a year ago. It is noteworthy also that the world's available stocks of wheat and flour in commercial channels on January 1 were only 233,000,000 bushels, the smallest with one exception in the last 10 years.

HUGE VISIBLE SUPPLY OF WHEAT.

As an offset to the foregoing analysis, which shows a rather strong ultimate situation for wheat, there is in the United States and Canada a combined visible supply and bonded stock of wheat totaling 100,000,000 bushels. Mill and elevator holdings are estimated at about 25,000,000 bushels more. No anxiety to possess this wheat is in evidence. The situation may not change until the stock has been whittled down or until the possibility of a crop scare which looms on the horizon is nearer at hand.

IS OATS SCARCITY COMING?

The supply of oats including the new crop and the carryover on August 1, 1921, was only about equal to the average farm consumption during the last five years. Nevertheless, sales from the farm have been about as large as usual. With an abundant corn yield it is possible that that grain is being substituted for oats on the farm, otherwise scarcity is likely before the next crop is harvested. Primary receipts are now running about 1,000,000 bushels per week less than the average rate at which oats have disappeared into consumptive channels since the crop year started. This rate is not sufficient to make a rapid reduction in the huge visible supply. Pronounced price changes are improbable until the latter shows stronger signs of dwindling to small proportions by spring.

CASH GRAIN MARKETS.

The range of cash grain prices for the week ending January 18 was:

Chicago—Wheat—No. 2 hard, $1.09@1.11.

Corn—No. 2 mixed, 48 1-4@49 1-2c; No. 3, 47@48 1-2c; No. 4, 45 3-4@47 1-4c; No. 2 yellow, 48@49 3-4c; No. 3, 47@49c; No. 4, 45 1-2@47 1-4c; No. 2 white, 48@49 1-2c; No. 3, 47@48 3-4c; No. 4, 45 1-2@47 1-4c.

Oats—No. 2 white, 36 1-2@38 1-4c; No. 3, 33 3-4@36c; No. 4, 32 1-2@34 1-2c.

Rye—78 1-2@ 79c.

Barley—53@61c.

CLOVERSEED OUTLOOK A TOSSUP.

No pronounced change in red cloverseed values is in prospect in the immediate future, as the small size of the crop is counterbalanced by the fact that prices are now high compared with the purchasing power of farmers, and Europe is sending seed this way in spite of a small crop over there. The discount on alsike is decreasing. Timothy seed prices are slowly creeping upward.

Toledo, per bushel—Prime red clover, $13.85; prime alsike, $11.60; prime timothy, $3.25.

FEED MARKETS.

Slight weakness has been present in feed markets, although prices are only slightly lower. The movement of flour has increased to some extent, which determines the position of millfeeds. Larger cotton oil mill operations and inactivity of exporters have weakened the cotton seed meal market. No radical changes in values are expected.

Chicago—Bran, $24; standard middlings, $24.50; flour middlings, $26; hominy feed, $22; gluten feed, $34.65; cottonseed meal, 43 per cent, $43; 36 per cent, $39; oil meal, $46; tankage, $52.50@55.

HAY PRICES MOST ATTRACTIVE.

Hay loadings for Chicago and Kansas City have increased in the last week. Prices rose slightly during the first half of January and this advance, in addition to freight rate reductions, has made values more attractive to producers. Demand has increased slightly.

Chicago—No. 1 timothy, $22@23; No. 2, $19@20; No. 3, $15@17; No. 1 light clover mixed, $20@21; No. 1 clover, $17@19; No. clover mixed, $18@19; sample and threshed hay, $12@16; No. 1 to choice alfalfa, $17@23; Nebraska and South Dakota prairie, $15@17; straw, rye, $15@16; oat, $13@14; wheat, $12@13.

EGG PRICES ERRATIC

After declining to around 30 cents per dozen at Chicago, the egg market advanced nearly 10 cents only to lose half of this gain once more. The future course of the market is uncertain, as production has undoubtedly been stimulated by cheap feeds and favorable weather and it is possible that it is being overdone. Consumption of eggs has been heavy throughout the winter and the drop in prices may already have gone far enough to offset the increased supply available. Cold storage holdings of frozen poultry in the United States on January 1 were 103,355,000 pounds. The increase in stock during December was slightly less than in the same month a year ago.

BUTTER PRICES TREND DOWNWARD.

Although the slump in butter prices was arrested in the first half of last week, prices soon resumed their downward course. Arrivals of fresh butter were liberal, dealers again began to force their holdings upon the market and a shipment of over 3000 casks of Danish arrived at New York. Fancy butter was less abundant and moved freely most of the time. Receipts of butter at the four markets continue heavy, although reports from creameries indicate a slight decrease in production. The break in prices should have discounted most of the bearish factors.

Some of the Australian butter which arrived on the Pacific coast has been shipped to eastern market, where it is held above the prevailing level. C. i. f. quotations were 35 cents for Danish, 26 cents for Australian and 23 1-2 cents for New Zealand. About 10,000 boxes of the latter to arrive on March 1 were bought.

Prices of fresh 92 score butter at the four markets on January 18 were: Chicago, 33c; New York, 37c; Boston,

(Continued on page sixteen.)

Little Journeys to Market

WOOL MARKETS.

The main wool markets in the United States are Boston, Philadelphia, Chicago, New York, St. Louis, Portland, Ore., and San Francisco. Boston is the acknowledged leader because of its nearness to the woolen and worsted mills, which are concentrated in New England, and stocks held there are usually larger than at any other point. The woolen goods industry also is quite important in New York, Philadelphia and St. Louis. Chicago is less important as a wool manufacturing center than as a concentration point for wool grown in the middlewest and on the range. The large packing plants make Chicago prominent also as a source of pulled wools.

With the exception of a limited amount of fall shearing in the southern part of the United States, most of the wool clip comes off the sheep's back during the spring months while the consumption of wool by most mills in ordinary times is rather uniform from month to month. Most of the wool in the past has been concentrated in the hands of large dealers at the points named soon after shearing, who graded and stored it until manufacturers were ready to absorb it at fairly uniform prices which usually were high enough above the farm price to reward the dealer generously for his trouble.

At these big markets, most sales are made privately from samples or upon inspection of stocks in warehouses. There is no open market similar to the auctions held in Great Britain or in some of the countries in the southern hemisphere, although the United States government is using that method to dispose of the wool held since war time.

A Grave Menace

Was Cause of the Agricultural Bloc

David Lawrence, the correspondent whose interpretation of political currents at the national capital have a nationwide audience, discussed the agricultural bloc sympathetically in a special dispatch to The Spokane Spokesman-Review.

The underlying purpose of the senators who constitute that bloc, as Mr. Lawrence points out, is not to usurp the domain of the president. This bloc was called into existence by the widespread distress suffered by agriculture when farm prices came tumbling down with a crash and the farmers found themselves under the necessity of buying manufactured goods and other merchandise at a continuing high price level.

"The farmers feel," says Mr. Lawrence, "and their attitude is completely reflected in the aggressive position taken by senators from agricultural states, that the federal reserve board was unduly severe on the farmer during the deflation period, which began nearly two years ago. The banks of the nation were advised not to loan money on declining markets. The farmer was caught in the matelstrom of rulings and advice by the federal reserve system."

Mr. Lawrence's interpretation is not new, but it will impress a great many readers in all parts of the Union who follow his utterances with confidence.

Repeatedly THE FARMER pointed out at the time that the federal reserve board was bearing down so hard on the agricultural industry that its policy was short-sighted and unwise. The federal reserve board was criticized at that time, not for curtailing credit, but for delaying so long that restraining action and then clamping the compressor down so tightly on the farmer. National extravagance and inflation of credit were allowed to gain too much momentum before the federal reserve board took any action at all. When action was taken the members of the board should have known that the farmer has only one turn-over a year; that his crop was produced at high cost, and that a sharp curtailment of agricultural credit would send farm prices down like an avalanche and the whole country would suffer.

That is evidently the view that President Harding takes of the matter, as during the time the senate was moving slowly toward a vote on a measure to provide for a farmer representative on the reserve board, word was received from the president that he would observe the intent of the legislation and would name a farmer member.

Mr. Lawrence further reminds the opponents of the agricultural bloc that the farmers are pointing to the war finance corporation as the best evidence of their ill treatment at the hands of the federal reserve board. He puts the matter concisely and effectively when he says:

"Why should the war finance corporation have been necessary, ask the agricultural groups, if the federal reserve board had comprehended the needs of farmer finance? The fact is, the war finance corporation has done some wonderful things, for which the farmers in those sections of the country which have been helped will be everlastingly grateful, and the praises of Eugene Meyer Jr., head of the finance corporation, are loudly sung in the north, east, south and west, wherever timely financial aid has been extended through the finance corporation."

Dairymen Win

Dealers Buy From the Association

An agreement has been signed in Spokane between the Inland Empire Dairy Producers' association and all of the principal milk distributing companies of that city except one, the Broadview, under which the distributors agree to purchase practically all of their milk supply for a period of three years from the cooperative association. The price to be paid at the present time is $2.85 per 100 pounds net to the producers' association for 3.7 per cent milk. All the milk will pass through the byproducts plant of the association, where it will be weighed and tested, but each private distributing company will process its own milk in its own plant. The producers' distributing company, which is composed of former milk drivers, will continue to receive its supply of processed milk direct from the producers' byproducts plant.

The agreement also provides that the retail price of milk in the city of Spokane shall be 13 cents per quart, instead of 10 cents, which it has been for several months as a result of the milk war between the producers' association and the private distributors. The new price is already in effect.

Manager A. A. Newbery declares that the consummation of the agreement is the greatest victory for cooperative dairy marketing ever won in the Pacific northwest.

Manager Newbery and others associated with him in the conduct of the affairs of the producers' association had believed that it would be possible to maintain a price of 10 cents per quart for bottled milk delivered in the city of Spokane, but declare that this is not possible, owing to the fact that the people of the city did not support the association with the loyalty which it merited. Notwithstanding the fact that the association reduced the price of milk to 10 cents per quart from the 13 cents per quart that it was when the producers' byproducts plant was started, about 75 per cent of the consumers continued to purchase their requirements from the private distributors, according to Manager Newbery, who declared that the association could not maintain the low price with the small volume of business it was, therefore, compelled to do.

City officials of Spokane have threatened an investigation to see if the agreement between the distributors and the producers for a 13-cent price in the retail milk trade does not constitute a violation of federal law as an illegal combination.

Hay Growers Will Continue

J. F. Schreiner, who was recently appointed receiver for the Washington Hay Growers' association following financial difficulties of the organization, has secured authority from the courts to continue the business of the association under existing regulations and contracts. It is held by the court and Mr. Schreiner that the continuation of business by the association will be of benefit not only to its 400 members, but to its creditors as well.

The association still has under contract between 10,000 and 15,000 tons of the 1921 crop, according to the report from Yakima. The association plans to continue to operate during the 1922 season under its present contracts, with an estimated production of some 35,000 tons of hay.

It is understood that the liabilities of the association total about $35,000, with assets estimated at from about half of this amount to $25,000.

The financial difficulties are understood to have resulted from over-enthusiasm during the early part of the 1920 crop season, when growers were advanced $21 per ton on their hay. When the market went down the average price could not be maintained as high at $21, but refunds from members who received this amount have not yet been secured.

Poultry at Spokane

Following the show in Seattle early in the month, and a considerable number of lesser shows throughout the state, the annual Spokane show is being held this week. Many parts of the state, as well as British Columbia and the neighboring state, are represented by exhibits. Many birds that took premiums in the Seattle show have reached Spokane, after participating in other shows en route. While the affair is being held under the auspices of the Spokane Poultry Breeders' association, it is the official American Poultry Breeders' association's gold medal show for this state, according to B. F. Mitchell of the management. Judging is being done by James A. Tucker of Michigan.

The state poultry breeders' association holds its annual convention during the show. A report of both the show and the convention will be given in THE FARMER in an early issue.

DO NOT HURRY THE COW.

It is poor policy to hurry the milch cow. Quiet and ease are essential parts of her ration.

The Seattle Show

One of the leading poultry shows of the Pacific northwest this season was that held in Seattle the early part of this month. A general report of this show was given in a previous issue of The Washington Farmer, the awards being omitted because of lack of space in that issue. The awards were as follows:

Dark Barred Plymouth Rocks—Randall Poultry Yard, Seattle, 2d young hen; 4th cockerel. Roselure Farm, Yarrow, 1st cock, 3d and 5th hen. Guy E. Knowles, Kent, 3d cock, 4th hen. Ray Leftwich, Tacoma, 2d and 5th cockerel, 3d young pen. Ellis S. Jennings, Tacoma, 2d cockerel, 2d pullet. Jacobson Poultry Yards, Tacoma, 1st and 2d cock, 1st and 2d hen, 1st and 3d pullet, 1st old pen, 3d cockerel. R. H. Sanderson, Seattle, 1st young pen; 1st cockerel. H. B. Densmore, Seattle, 4th cock, 5th pullet.

Light Barred Plymouth Rocks—Randall's Poultry Yard, 1st cockerel, Truetype Poultry Farm, Tacoma, 4th pullet, 4th cockerel. Ray Leftwich, 2d pullet. Jacobson Poultry Yards, 1st hen, 3d pullet.

Buff Plymouth Rocks—Harry H. Collier, South Tacoma, 1st cock; 1st, 2d and 3d hens; 1st, 2d, 3d and 4th pullets. Fred Kuhns, Seattle, 2d cock.

Silver Spangled Hamburgs—Fred A. Johnson, Tacoma, 1st cock; 1st cockerel; 1st hen, 1st pullet.

S. C. Rhode Island Reds—P. H. Babcock, Seattle, 1st, 2d cock; 1st, 4th hen; 1st, 5th cockerel; 2d pullet; 4th young pen. P. S. Murphy, Seattle, 3d cock. J. T. Randall, Seattle, 1st pullet. E. D. Tirana, Seattle, 2d pullet. Mrs. F. H. Herman, Seattle, 3d, 4th and 5th pullets. Thomas Svaleson, Suquamish, 5th young pen. Mrs. H. A. McCall, Seattle, 5th cockerel. Colin W. Robertson, Seattle, 1st cockerel; 3d young pen; 1st old pen; 3d and 4th cockerel. Mrs. O. L. Williams, Sunnyside, 2d cockerel; 2d and 3d hen; 5th pullet. Fred Kuhner, Seattle, 4th cock.

Rhode Island White—Fred Hoyt, Seattle Heights, 1st and 2d pullets. J. F. Randall, 1st hen; 1st cockerel. Cowherds Duckery, Ferndale, 1st cockerel; 1st pullet. Mrs. C. M. Sylvester, 1st young pen.

White Wyandottes—George E. Plummer, Seattle, 3d and 4th cockerel; 4th and 5th pullet. James H. Nichols, South Tacoma, 1st and 2d hen; 1st cockerel. Raynard H. Moul, Seattle, 4th hen. James H. Nichols, South Tacoma, 1st and 2d pullet. Charles Bickert, Yakima, 1st old pen; 3d pullet; 2d and 5th cockerel; 3d hen. V. J. Hemmert, Seattle, 2d pullet. J. W. Thatcher, 1st cock.

Blue Wyandottes—Methow Valley Live Stock company, Seattle, 1st young pen; 2d cock.

Buff Wyandottes—Fred A. Johnson, 1st pen; 1st cockerel.

Silver Wyandottes—Fred A. Johnson, 1st old pen.

Partridge Wyandottes—Mrs. O. Bogstedt, Seattle, 1st young pen.

Silver Laced Wyandottes—Mrs. E. N. William, Seattle, 2d old pen; 1st hen; 1st young pen; 1st pullet.

White Rocks—Jack Bertram, Lents, Ore., 2d cock; 5th cockerel; 1st hen, Axel Wold, Seattle, 1st pen; 1st cockerel; 4th and 5th pullets. Mrs. S. Y. Bennett, Olympia, 3d cock; 4th cockerel; 2d and 4th hen. Ideal Poultry Yards, Hoquiam, 1st old pen. A. A. Giersch, Seattle, 1st cock; 3d cockerel; 3d hen; 1st and 2d pullets. James Wright, Richmond Heights, 2d old pen; 5th hen. George Haakons, Seattle, 2d young pen; 3d pullet.

S. C. White Leghorns—David Trouts, Lents Station, Ore., 1st pullet. James J. Scanlon, Lakeview, 1st cockerel; 5th pullet. L. A. Babcock, Seattle, 3d pullet. Theodore M. Thorsen, Bellingham, 4th pullet. R. R. Upper, Orilla, 1st hen; 1st and 2d cock. E. D. Hosmer, Sherwood, Ore., 4th cock. Fred A. Johnson, 3d cock; 3d hen; 1st, 2d, 3d and 4th cockerel. Fish Bros. White Leghorn Farm, Seattle, 5th cock. W. F. Sheets, Alderwood Manor, 3d, 4th and 5th hen.

Light Brahmas—Jud Maguire, Seattle, 2d old pen. Charles Bylsma, Seattle, 1st and 2d cock; 1st old pen; 1st young pen; 1st and 2d cockerel; 1st and 2d pullets; 1st and 3d hen. O. T. Seymore, Seattle, 2d young pen; 2d and 4th hen; 1st capon.

Black Langshans—A. E. Indriedson, Seattle, 2d cock; 1st and 2d hen; 3d pullet. Mrs. L. B. Carroll, Seattle, 1st cock. J. K. Klein, Seattle, 2d hen; 1st and 2d cockerel; 1st and 4th pullet; 1st young pen.

White Orpingtons—C. H. Harrop, Seattle, 1st young pen; 1st cockerel; 3d pullet. Frank H. Torrey, Edmonds, 1st and 2d hen; 2d and 3d cockerel; 1st and 2d pullet.

Buff Orpingtons—C. H. Harrop, 2d pullet; 1st and 2d young pen; 2d cockerel and 2d pullet. Mrs. James Wright, Richmond Highlands, 4th and 5th pullet; 2d and 4th hen; 1st cock; 5th cockerel. J. C. McGinnitie, Mt. Vernon, 1st and 3d cockerel; 1st pullet. R. C. Simpson, Seattle, 1st hen; 1st old hen; 4th cockerel. Elliott Higgins, Three Tree Point, 3d young pen; 3d old pen. Mrs. B. Hildebrandt, Edmonds, 2d old pen; 3d pullet.

Blue Orpingtons—Hjalmer T. Johnson, South Tacoma, all awards.

Black Minorcas—A. Hollings, Seattle, all awards.

Mammoth Bronze Turkeys—Mrs. F. R. Hawley, Kirkland, 1st young tom. Mrs. Charles E. Stevens, Seattle, 2d old tom; 3d old hen. Mrs. B. Hildebrandt, 1st yearling tom; 1st young hen. Mrs. James Wright, 3d old tom; 1st and 2d old hen; 3d and 4th young tom. Mammoth Bronze Turkey Farm, Walla Walla, 1st old tom; 4th and 5th old hen; 2d young tom; 2d and 3d young hen. Mrs. J. W. Denny, Seattle, 2d yearling tom.

White Holland Turkeys—Mrs. F. R. Hawley, Kirkland, 1st young tom.

Jersey Giants—Cowherd's Duckery, 1st pullet. M. S. Meengs, Seattle, 1st cock. Fred Hoyt, Seattle, 1st and 2d hen.

Anconas—The Ancona Grove, Walla Walla, 1st and 2d cock; 2d cockerel; 2d pullet. U. R. Edinger, Seattle, 1st cockerel; 1st young pen. Ray Leftwich, 1st pen; 1st pullet.

R. C. Anconas—The Ancona Grove, 1st cock; 1st cockerel; 1st and 2d pullet.

Buff Leghorns—Mrs. O. Schmanke, Seattle, 1st cock; 2d and 3d young pen. Bush Farm, Portland, Ore., 1st young pen.

Andalusians—J. N. Scott, Tacoma, 2d cock; 2d cockerel; Mrs. J. W. Denny, Seattle, 1st cock; 1st hen; 1st cockerel; 1st pullet.

White Faced Black Spanish—Fircrest Poultry Farm, Puyallup, 1st and 2d cockerel; 1st pullet.

Light Brahmas—Charles Bylsma, 1st and 2d cock.

Red Cornish—Cowherd Duckery, 1st pullet; 1st cockerel.

Dark Cornish—Methow Valley Live Stock Co., 1st cock; 1st young pen.

White Silkies—L. P. Smith, Bellevue, 1st cockerel; 1st pullet.

Golden Sebright Bantams—Mrs. Lilly Hollings, Seattle, 1st cockerel.

Black Cochin Bantams—Wilbur Hosmer, 1st cock; 1st hen. Thomas O. Anders, Seattle, 1st young pen.

Partridge Cochins—V. J. Hemmert, Seattle, 1st young pen.

S. C. Light Brown Leghorns—Fircrest Poultry Farm, 1st cockerel; 2d pullet. Fred A. Johnson, 1st cock; 1st hen, 2d cockerel; 1st pullet. D. C. Kessler, Seattle, 2d cockerel. Mary E. Nichols, Portage, 1st young pen; 2d cock. Hjalmer Johnson, 1st cock; 1st cockerel; 1st pullet.

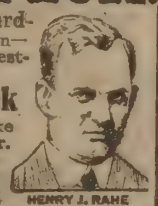
Houdans—Leland M. Bridgman, Seattle, 1st old pen.

Silver Crested Black Polish—H. K. Carter, Tacoma, 1st cockerel, 1st pullet.

Toulouse Geese—H. H. Collier, Tacoma, 1st young gander; 1st young goose.

Guinea Fowl—Mrs. L. T. Michel, Seattle, 1st cock; 1st pullet.

Mallard Ducks—Z. B. Rauson, Seattle, 2d cockerel; 2d pullet. Edward Rauson, Seattle, 1st cockerel; 1st pullet.



Rouen Ducks—Cowherd's Duckery, 1st cockerel; 1st pullet.

White Muscovy Ducks—L. P. Smith, Bellevue, 1st cock; 1st, 2d, 3d and 4th hen.

IS NOT LAYING WELL.

The hen with the frozen comb probably is producing very few eggs.

I Want Men!

I want 500 men—regardless of age and education—to qualify *at once* for interesting work at

$40 to $100 a Week

Or to open garages and make $10,000.00 to $25,000.00 a year. Three Billion Dollars will be spent for motor cars this year. Thousands of Rahe-trained mechanics needed! Get into this big-money business NOW! You can do it easily.

I Will Pay Your Railroad Fare To Chicago, Cincinnati or Kansas City

I'll pay your fare to my school *nearest your home.* Then a short course in my wonderful shops—working with tools, *not books*, under master instructors—and you'll be ready for REAL MONEY. No "book learning" needed.

SPECIAL LOW RATE—7-DAY GUARANTEE

I've always given the BEST course for the LOWEST price. Now, with three schools, I can cut the tuition still lower and pay your railroad fare, too. And, if not convinced after a week that I can make you a GOOD mechanic, withdraw from school and it won't cost you NOTHING. This will be a BIG year. Get started EARLY. Write for Free Book and PROOF that easy Rahe training will get you out of the rut in a few weeks. A card will do.—HENRY J. RAHE.

Seattle Machine Works
84 W. Lander St.
Seattle, Wash.

Reduce your coal bill 10%

Just one little fact, if realized and used by most people, would save them at least 10% and perhaps 15% on their coal bill. It is this—.

For your furnace, range or heater there is a nut coal or combination of nut coals which will fit your requirements fully as well as lump—in some cases better than lump.

By purchasing nut coal instead of lump from us you save the price of one ton of coal every ten or seven tons you buy.

Nut and lump from the same mine are exactly the same quality—the difference in size makes NO difference in quality. Nut costs less to handle—we pass the saving on to you.

To obtain the kind of nut coal best suited for your purpose, tell the coal expert who answers the phone just where and how you intend burning it—his recommendation will prove satisfactory and economical.

PACIFIC COAST COAL COMPANY

Black Diamond Coal
Newcastle Coal
Issaquah Coal
South Prairie Coal
Franklin Coal
Diamond Briquets

If you live east of Yakima there seldom is any advantage in insisting on Pacific Coast Coal Company coals. West of Yakima there invariably is an advantage. If you live west of Yakima and can not readily obtain these coals from your dealer, address the Sales Department of the Pacific Coast Coal company, Seattle, and we will arrange to have you supplied.

Aged Ewes

Parcelled Out to Small Farmers

Cooperative distribution of aged ewes among small farmers would appeal to range sheepmen, in the opinion of R. A. Ward, general manager of the Pacific Wool Growers, but it should be undertaken at the time of the annual culling of the ewe band, or shortly after, in order to make it practical, he believes.

Soon after publication of Dr. E. A. Bryan's article on "The Menace of the Aged Ewe Shortage," some weeks ago, inquiries as to where such ewes could be purchased began coming into the office of THE FARMER. In a search for this information, Mr. Ward was consulted and his idea of how the cooperative buying idea could best be carried out was asked.

"On the whole the plan is sound," he replied, "but there are a few practical details which make its application difficult in certain cases. It is customary among sheepmen at lambing time or in the fall, when the lambs are taken off and shipped to market, to go over the old ewe band and take out all of the old 'gummers,' 'broken mouths' and 'spread mouths.' They are usually cashed at this time or placed in what we call the 'hospital band,' which is made up of cripples and these old ewes. In the fall, as soon as the ewe band is given this culling, in most instances it is sent out on the winter range, but in case of very severe weather it goes into the feed lot. In either case, it is not practical to cull them again until shearing or lambing time the following spring.

"This would make it necessary for cooperative distribution to be undertaken at the time of the annual culling or shortly after.

"Range sheepmen will be glad to sell these old ewes at a very reasonable figure, but they would not care to job them out in small lots to a number of ranchers," Mr. Ward continued. "They would, however, be glad to turn them over to a county agent or to a representative of a group of cooperative buyers, so that the entire transaction would be closed as far as they were concerned at the time of the transfer. This is because they would not have facilities for caring for the ewes on their own ranches until they were all distributed. We had an example of this this year. A number of growers desired to stock up with a few aged fine-wool ewes apiece, which were suitable for one or two lamb crops on farms. We arranged with a large sheepman to secure these ewes at a very reasonable figure. He went to considerable trouble and separated all of the ewes which were 5 years old for the purpose of supplying the wants of the flock man. When he had the aged ewes segregated the farmers delayed in securing their purchases so long that he was finally forced to throw the old ewes back into the band, as he had no place to hold them on good feed. This is just what will occur in the majority of cases where range men are concerned and this could only be solved by having a representative of the farmers take over all of the ewes at culling time, even though they would have to be disposed of in small lots over quite a period.

"On a recent trip through eastern Oregon and Idaho I found that a majority of the range men were forced to cash their entire lamb crop, including the ewe lambs, in order to meet interest on maturing loans and to provide expense money for the coming year. This is to be regretted, because most of these bands are beginning to show the effects of the aged ewe. I know of one conservative and constructive banker, who in spite of present financial conditions served warning on his customers that no ewe lambs in his county should be marketed, and I understand that the majority of his people were able to hold their ewe lambs and sold only the wethers and the old ewes. This is as it should be. We hope that next season the financial situation will be easier and that this can be done in every range section."

Content and Comfort

By C. W. Hickman, University of Idaho.

Fattening steers should be handled as quietly as possible, avoiding any excitement which would make them leave their feed.

Cattle should be fed regularly, never varying more than 15 minutes.

the even-tempered, regular man, who is quiet in manner and movement, invariably proves more satisfactory than the tratic, irregular one.

Steers should have plenty of fresh water before them at all times.

The feed yards should be provided with plenty of bedding.

The whole aim is to keep the steer contented and comfortable if we are to expect the most gain for the feed consumed.

Milk Tastes Tainted

Please tell me what can be done for my cow. Her milk and cream tastes tainted. I feed her wheat, hay and mill feed, potatoes and carrots. W. J. C.
Nespelem, Wash.

You do not state whether the milk is tainted as it comes from the udder, or whether it develops the taint upon standing. If it appears in fresh milk it is possible that the potatoes are responsible for it, especially if they are fed raw. Cooked potatoes are not so likely to cause bad flavors. If the bad flavor appears after the milk is 12 or 24 hours old, it is caused by organisms that get into the milk some way. To guard against these wash the udder well and dry it before milking. Milk with dry hands. Then sterilize carefully all the buckets, strainers and pans or the separator if you use one. I have known of cases where it took a careful sterilization of all utensils every day for a week before the trouble was controlled.
A. B. N.

World's Dairy Congress

The meeting of the world's dairy congress in the United States, which was originally scheduled for this year, has been postponed until 1923 in order to give more time for the preliminary arrangements. The joint resolution providing for the delay was introduced into congress by Senator George W. Norris of Nebraska and Representative Edward E. Browne of Wisconsin. The present plan is to hold the world's dairy congress in October, 1923, just in advance of the national dairy show and in the same city.

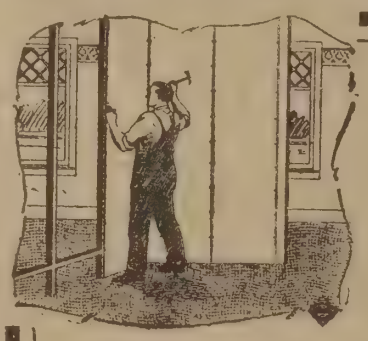
Many ambitious men and women live only half a life—and don't know it

No person whose nerves are continually irritated, whose appetite and digestion are disturbed, or who doesn't sleep well has more than half his normal chance for success in life. For weakness, debility, anemia and general lack of tone are a serious handicap to anybody.

Those who drink tea or coffee are often sufferers from these conditions. Tea and coffee contain caffeine, a substance which has a decided stimulant action on the nerves and brain cells.

Each cup of strong coffee contains about as large a dose of caffeine as your doctor would ordinarily give to a very sick person.



You can readily see that the effect of giving this stimulant regularly to a well person might finally have a tendency to make him sick.

If you want to avoid a very common cause of irritation and enjoy restful sleep, good digestion, and all the feeling of vigor and robust endurance that comes to healthy, normal people, quit tea and coffee, and drink Postum, instead. It is a rich, coffee-like cereal beverage—perfectly delicious!

Order Postum from your grocer today. Drink this fragrant, aromatic beverage and see how much better you'll feel—able to do more without becoming fatigued—as thousands have discovered for themselves.

Postum comes in two forms: Instant Postum (in tins) made instantly in the cup by the addition of boiling water. Postum Cereal (in packages of larger bulk, for those who prefer to make the drink while the meal is being prepared) made by boiling for 20 minutes. Sold by all grocers.

Postum *for* Health
"There's a Reason"

"PERFECTION" PLASTER WALLBOARD Is Nailed On Just Like Lumber

You can plaster your own walls and ceilings with a hammer and a saw, and no battens are required over the joists to finish the job. You nail direct to studding or rafters, and by using "Perfection" you get all the advantages of the finest plastered job with none of the muss or delay—you can install finish lumber the same day as you put in the "Perfection" Plaster Wallboard.

The Story of "PERFECTION" Tells You How---and It's FREE for the Asking!

When it comes to walls and ceilings everyone admits that there's nothing like plaster, and when it comes to plaster those who have used it say there's nothing like "Perfection" plaster wall board. This booklet tells the whole wonderful story.

ASK YOUR HARDWARE OR LUMBER DEALER OR WRITE DIRECT TO THE MAKERS.

Maintenance Ration

It has been shown by careful experiment that the chief difference between a good dairy cow and a poor dairy cow lies in their relative abilities to consume feed in excess of that required to maintain the bodily activities, says H. E. McNatt, dairyman at the western Washington experiment station. In other words, a poor dairy cow can be induced to consume little feed above a maintenance ration, unless she has a marked disposition to lay on fat. This latter is an opposite tendency to milk production, and is always an indication of a poor milker. On the other hand, a good dairy cow readily consumes large quantities of feed over and above that needed for maintenance. This extra feed is used for milk production instead of for beef production.

It is more accurate to say that the good dairy cow is compelled to consume a large amount of feed because the inborn milking tendency drains her body of large amounts of milk material, which must be replaced if the animal is to remain at constant weight. The milking function of the poor cow is poorly developed and hence does not tend to drain her body of nutrients to a large extent. This results in a limited appetite after maintenance needs are met.

Since the dairyman's profit comes only from that feed consumed above maintenance needs, it becomes readily apparent that the maintenance ration should be as small as possible in proportion to the total ration.

Some of the things causing increase in the maintenance needs are:

(1) Exposure to cold fall rains. The cold water on the animal's body must be heated to about 100 degrees F. This takes feed.

(2) A developing foetus within the cow's uterus.

(3) Cold drinking water, which must be warmed by the feed consumed.

(4) A too thin condition of flesh, which results in rapid loss of body heat.

Does it not seem apparent, then, that only an unusually good cow will return a profit, if her maintenance requirements are enlarged by a developing foetus, being kept in a thin condition, offered only cold drinking water and being compelled to stand out in the cold fall and winter rains? A mediocre or poor cow will return a loss under such conditions.

The best policy is to keep only good cows, then give them a chance. Keep them in good condition, well stabled and abundantly fed.

VETERINARY

By DR. S. B. NELSON.

Cow Has Lumpy Jaw.—I have a cow that has a big lump on the side of her jaw. It breaks open and runs a bloody matter. The swelling started some time in May and has been growing since that time. Recently she has had three of these lumps on the swelling. Is there anything I can do for her, as there is no veterinarian close? She is dry now. This cow's mother had a lump on her jaw, but did not have any trouble with it. Is such a thing inherited? F. L.
Springdale, Wash.

Your cow without doubt has lumpy jaw, an infectious disease, and I would be of the opinion that in her condition it would not pay to treat her. The chances are she would not recover and it is quite probable that she would be a source of infection to the rest of your cattle. It is quite likely that this animal did not inherit it from her dam, but became infected later on in life. The disease is transmissible to man.

White Discharge.—My 3-year-old cow calved nine weeks ago and was bred about three weeks ago. She discharges a slight white mucous fluid occasionally. What does it indicate? J. L.
Olympia, Wash.

If the cow retains the foetus, the slight white discharge does not indicate anything. If not, it may indicate contagion, abortion, infection.

Red Water.—I have a milch cow that will calve in about two weeks. She is showing bloody urine. Has been in that condition about a mont. Is it probable that she will recover after calving or will the trouble grow worse? Does this trouble affect a cow's milk or render her unfit for beef? E. E. G.
Auburn, Wash.

It is possible that your cow will recover after she has calved. At the present time there is no reliable remedy known for the disease of red water, from which your cow is probably suffering. In this disease they frequently recover and then it reappears and each time that it comes the animal suffers more severely from it.

Horses Have Goiter.—I have two mares about 15 years old and both have a goiter on the neck. Is there anything that will take them off without an operation?
Tolt, Wash. E. G. M.

There is no satisfactory remedy for the removal of the goiter in old horses, as you mentioned. Most horses are affected this way late in life.

Apply Iodine Daily—I have a cow that was taken silk about two weeks ago with sore throat and I bathed it with turpentine and lard and gave her a little strong alum water twice a day. Her appetite is good now and she eats and drinks well and chews her cud. There is a hard ridge on the left side of her neck. What should I do for it? J. R. L.
Reardan, Wash.

Apply tincture of iodine to it daily.

Udder Swells—I have a cow 7 years old and at periods varying from two days to three weeks or more I notice, usually at the evening milking, that the right quarter of her udder is as hard as a bullet and I do not get the usual flow of milk from it. The next morning this quarter seems to be perfectly normal again. There is no apparent soreness. This cow has had milk fever twice at calving. She also tries to hold back her milk. A. H. H.
Ellensburg, Wash.

Try giving the cow a tablespoonful of fluid extract of phytolacea in a little water once daily. Apply the following liniment to the affected quarter of the udder after each milking: Tincture of iodine, three ounces; soap liniment, five ounces.

To Cure Ring Bone—I have a mare that is pretty lame in her front foot. It seems to be a ring bone, as it is just above the hoof and it seems to be hot. She began to get lame about a year ago and now I can not work her. I can not get her to a

Cow Comfort Means Milk Dollars

Have you ever stopped to consider that every penny you invest in making your cows more comfortable brings you back dollars in extra profits on account of increased milk yield?

And cow comfort is only one of the advantages Star Barn Equipment offers. Every day you delay modernizing your barn by installing Star conveniences is costing you money—no matter how few or how many cows you own.

United States patents protect the exclusive features that put Star Barn Equipment in a class by itself—you will find these advantages in no other brand. For instance, the Unit System which enables you to add stalls as your herd grows—the Star Alignment Device which keeps bedding and stalls clean and lessens labor—the Star Curb Clamp which cuts down installation cost—these and many other features you wouldn't be without are exclusive with Star.

In the Star Line, you'll find more than merely Steel Stalls and Stanchions—everything for the barn, inside and out, is there: Water Bowls, Pens, Ventilation Systems, Litter and Feed Carriers as well as Harvester Hay Tools, Cannon Ball Door Hangers, Hoghouse Equipment, Garage Door Fixtures and a world of other farm specialties.

Our 348-page bound catalog, profusely illustrated in colors, is free if you'll write for it and tell us when you're going to build a new barn or remodel your old one. Our Plan Department is at your service, free. Use the coupon for plans. Write for the catalog.

POULTRY

An Early Start

By MRS. GEORGE BURTON.

Success in any business depends a good deal on getting a good start, but especially so in raising early chicks.

The first thing is to see that the incubator and brooder are in good order. Don't wait until it is time to use it, but any warm day during the winter get it out and examine carefully in every part. Sometimes the lamp or water pipes have a leak. The first year I used my big one I had to take off the entire top to solder a leak in the pipe, because the people I bought it from had carelessly left some water to freeze in the pipe. Examine your thermostat and regulator pin and put with the thermometer to prevent rust. If rusted, scour off all rust and oil. Test your thermometer with a neighbor's or a doctor's thermometer, or in case you have several, with each other.

Test in a cup of milk or warm water. If too hot it may break them. Sun and disinfect the machine and the trays. Lay trays out in the sun all day.

The little round ones often need new felt or paper in the egg chamber if badly soiled. I like to have everything to set as early as I can get eggs. I want to begin hatching by the first of February or sooner.

Pea Fowls

"The Black Shoulder pea fowl is the best breed for the Pacific coast," according to G. Poncin of Seattle, who has had a number of years' experience with the birds, and who believes them to be the hardiest and more prolific, than any of the others.

The Mammoth is a more common breed and is much less expensive. The white breeds are very rare.

Pea fowls need plenty of room under a dry shed where they can keep out of the rain. They will not do well if they get wet. The young birds are brooded by the pea hen and they will get along in fine shape if kept out of the wet. They are more delicate than turkeys and should be protected until they have feathered out well.

Cleaned Eggs

A cleaned egg will not keep. This has been well established by observation of cleaned eggs under cold storage conditions, and it apparently makes little difference whether they are "spotted" or washed, either with vinegar, sal soda solution or water, or whether they are cleaned dry with steel wool or sandpaper. Deterioration starts quickly and proceeds rapidly, hence cleaned eggs can not be shipped east or put into cold storage, and if detected never will be graded as "selects." They go into a class known as "firsts," the same class they would grade into if not too dirty. The time and labor required for washing them, therefore, might he spent more wisely in preventive work—cleaning dropping boards more frequently, renewing nest straw, keeping floor litter deep. The failure to keep is accounted for by the fact that cleaning removes a protective covering which keeps out air. An expert candler will detect a cleaned egg almost invariably, under the lamp, and often it is possible to do so merely by the touch.

Bronchitis in the Flock

My full blooded Rhode Island Reds wheeze and have a noise in their throats similar to a child when it has croup. They also turn white around their eyes and mouths. They eat well, have a good, dry house and are getting mash, scratch feed and lots of green feed.

Chehalis, Wash. MRS. E. S.

The disease present in your Rhode Island Reds, which causes them to "wheeze" is bronchitis or pneumonia. Very often this condition is produced by the fowl being exposed to a draft, dampness or general improper ventilation.

I would suggest that you isolate any birds found to be affected with this condition and put a drop of spirits of camphor in the mouth, once daily, for several days. In case considerable improvement is not shown in a week's time I would suggest that you dispose of affected birds. Sometimes this condition will persist for months and the birds finally die of the trouble. In the meantime, egg production is entirely suspended, or considerably diminished. W. T. JOHNSON.

Western Washington Experiment Station.

Barred Plymouth Rocks

"I have always tried to breed for egg production as well as type," said G. E. Knowles of King county, Washington, who is a breeder of Barred Plymouth Rocks. "I would not be satisfied with any hen unless she was a good layer."

Mr. Knowles told how some of the best strains of Barred Plymouth Rock were running very close to the lighter breeds in egg production at the egg laying contest. The average for four pens at the Puyallup contest for 1921 was 290 eggs per bird, which is very good when one considers that the Barred Plymouth Rock is a remarkably good table bird.

"Like other good laying strains, the hens in our flock will not show any inclination to set until late in April. In fact, we had to buy a few mongrel hens to hatch our settings. We have a 300-egg incubator, from which we make two hatches, the first early in March and the second in April. We find that there is a good demand for young stock in this breed."

Agglutination Test

Will you please tell me what the agglutination test for eradication of vacillary white diarrhea is? How is it used? MRS. E. R.

Newport, Wash.

The agglutination test for eradicating vacillary white diarrhea is a laboratory test, applied for the purpose of detecting affected individuals, which are to be used as breeders and eliminating them from the flock.

In carrying out this test, a sample of blood is obtained from each individual bird in the flock. These samples are then tested in the laboratory, in order to determine which of the fowls are carrying the germ of vacillary white diarrhea.

W. T. JOHNSON.

Western Washington Experiment Station.

LIME WILL HELP.

A little well-slaked lime, sprinkled on the dropping boards and in crevices about the poultry house, will help to keep it sanitary.

ORCHARD

GRANVILLE LOWTHER
EDITORIAL CONTRIBUTOR

Organic and Inorganic Fertilizers

In a previous article discussing the comparative values of nitrogen, phosphorus, potash and other fertility elements, Mr. Newsom urged the need of a complete orchard fertilizer in preference to one consisting in whole or largely of nitrogen. The same article gave experiments conducted by Roy Larson, soil investigator in the Wenatchee district of Washington, tending to show that potash, phosphorus, sulphur and lime are not needed in the average orchard soils of the Pacific northwest. In the following extracts from an address delivered by Mr. Newsom before the Northwest Fruit exposition at Seattle last fall he takes up the question of the comparative value of organic and inorganic fertilizers.

By E. P. NEWSOM, Chemist and Lecturer, Tacoma, Wash.

The Encyclopedia Britannica states that at Rothamsted station, England, organic fertilizers were used for a period of 51 years, resulting in the average yield of wheat of 37 bushels per acre, as compared with an average yield for the same period of only 13 bushels on the same kind of soil unfertilized. The same results were obtained at Woburn, England, for a period of 31 years. A further fact is stated that the good effects of organic fertilizers on the soil could be seen for 15 years after their use was discontinued.

On the other hand, in Pennsylvania, where the strictly chemical, or organic, fertilizers were used for several years, it was seen that when their use was discontinued, the soil was found to be dead. In other words, that it would not respond with a yield of crops without the fertilizer.

Dead soil is simply soil where the bacterial life has been destroyed.

Chemical, or inorganic, fertilizers, while at times useful as a tonic for "sick" trees, tend to destroy the bacterial life of the soil by their residual effects. Their use is advocated on the ground of cheapness and the "quick kick" they have. So also morphine and cocaine have a "quick kick" and for a few minutes the victim imagines that he is a millionaire and that in comparison to himself John D. Rockefeller is a humpbacked mendicant, but the drug soon kicks the victim into inefficiency and degradation and makes him a parasite and an unproductive citizen of the commonwealth. So also some of your orchardists who are continually experimenting with soil drugs will find your orchards "kicked" to where the Valencia orange groves of Riverside, Cal., were "kicked" by the continued use of nitrate of soda, namely to 27 per cent of their normal productivity.

Now organic, or animal products, may cost a little more initially, but are more economical in the end, because, not being water soluble, but breaking down under moisture conditions, gradually, through bacterial action, are more lasting, while not leaving in the soil hurtful residual effects. They not only furnish available plant food to the tree, but immensely stimulate and invigorate the bacterial life of the soil and thus very much increase the production of carbon dioxide. The latter in turn is the potent and necessary agent by which other plant food in the soil is rendered available. The organic fertilizers render a double benefit.

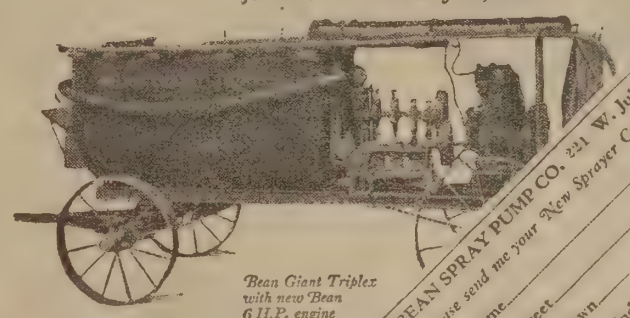
If any further proof were needed to substantiate the foregoing statements I would invite your attention to the very remarkable discoveries made in Germany during the last few years relative to the great importance of artificially fertilizing with carbon dioxide.

Briefly speaking, in 1917, German scientists undertook experiments in fertiliizng artifically with carbon dioxide. The results were most encouraging. But it remained for Friedrich Riedel, a German engineer, to carry out the experiments on a large scale under the most favorable conditions. At the great smelting works of Stinnes, in Luxemburg, he laid perforated concrete pipes, 50 centimeters in diameter, into fields through which filtered and purified carbon dioxide was forced by electric fans, the fields being planted to various crops. Near by he erected glass-covered enclosures, through which carbon dioxide was sent through perforated tubes above groud furnishing 5 per cent of carbon dioxide. The results, of course, were greatest in the glass-covered enclosures, since in the open fields much of the carbon dioxide was blown away by the winds.

The first and most important result from the artificial use of the carbon dioxide was the greatly increased leaf growth. In some of the cases the leaf area was increased by 70 per cent. This discovery refutes the idea that nitrogen alone is responsible for the increase of the leaf growth.

The second great result from Riedel's experiments was that even by gassing for only a fw weeks, the crop yields of all kinds were immensely increased in quantity, size and quality. The increases ranged from 36 per cent to 200 per cent. Whereupon, Riedel declares that carbon fertilization without other fertilizer promotes plant growth more effectively than all ordinary fertilizers, when these are used without artificially supplied carbon dioxide. By ordinary fertilizers, he evidently has reference to the purely chemical, or inorganic, since animal fertilizers do immensely stimulate the production of carbon dioxide.

The conclusions arrived at by Riedel seem to point to the use of organic fertilizers and aerated soil as the most practical methods now available to the farmer for increasing the amount of carbon dioxide for his crops, since it is not as yet commercially practicable for every farmer to obtain carbon dioxide on a large scale for artificially fertilizing his crops.



What Size Sprayer?

NEW SERIES *Overland*

"For Solid Comfort Give Me the Overland"

The Triplex Springs of the New Series Overland smooth out the jolts of country roads and give easy, restful riding everywhere.

Most farmer-owners get 25 miles to the gallon of gasoline, and high mileage for oil and tires.

Completely equipped when you buy it. A good investment!

Flexible—

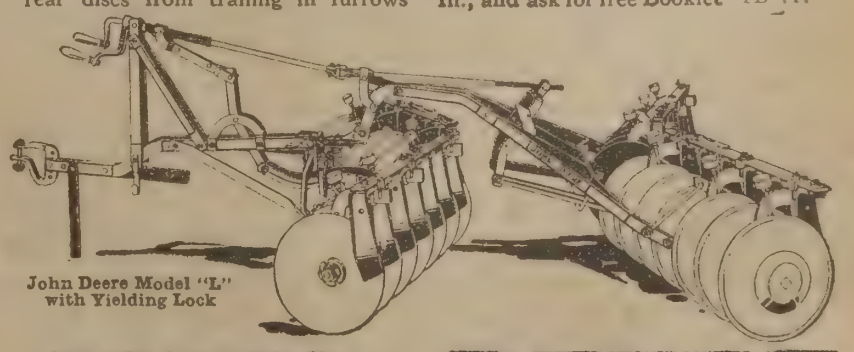
Penetrates and Pulverizes Better

John Deere Model "B" Disc Harrow

Up over ridges, down into dead furrows and depressions, on hillsides or on level land—a complete job of disking at even depth the entire width of the harrow can be done under all these varying field conditions by using a John Deere Model "B" Disc Harrow because it is flexible. The gangs are independent of each other. By means of a third lever, pivoted yoke and *unusually powerful* spring, the inner ends of the gangs can be given light pressure for soft ground or ridges, heavy pressure for hard ground or for going down into dead furrows and depressions. Each gang can be angled properly to prevent harrow from crowding to one side when working on hillsides and when overlapping hard and soft ground.

A Way to Save Money. Buy a Model "B". Use it with your horses. Later on, if you buy a tractor, you can convert the Model "B" into the popular John Deere Pony Tractor Disc Harrow by buying only a rear section and the proper hitch. Then you will have a harrow that you can use with either tractor or horses—an advantage that often saves much time and money.

John Deere Model "L" Tractor Disc Harrow with Yielding Lock



Two convenient cranks — one for each section. With these cranks, you can set the gangs from a straight line to extreme working angle and straighten them again *without stopping or backing.*

Patented automatic yielding lock coupling locks rear section when traveling straight ahead, preventing rear discs from trailing in furrows made by front discs. When turning, this lock yields—there is no dragging of harrow around corners.

A Flexible Harrow — conforms to uneven ground surfaces.

Aligning Device; adjustable hitch; adjustable scrapers; convenient grease cups and slotted gang couplings.

Write us today for further information. Address John Deere, Moline, Ill., and ask for free Booklet TD-747

John Deere Model "L" with Yielding Lock

Oil Light Beats Electric or Gas

Burns 94% Air

A new oil lamp that gives an amazingly brilliant, soft, white light, even better than gas or electricity, has been tested by the U. S. government and 35 leading universities and found to be superior to 10 ordinary oil lamps. It burns without odor, smoke or noise—no pumping up, is simple, clean, safe. Burns 94% air and 6% common kerosene (coal oil).

The inventor, W. W. Johnson, 31 N. Fifth St., Portland, Ore., is offering to send a lamp on 10 days' FREE trial, or even to give one FREE to the first user in each locality who will help him introduce it. Write him today for full particulars. Also ask him to explain how you can get the agency, and without experience or money make $250 to $500 per month.—Adv.

Most Folks Want to Live Within Reach of a Good Town

If we knew there was a wonderfully fertile little farm located on some remote plateau of the Himalaya mountains it is safe to say that few farm families would be willing to settle on it. Why? The reasons are obvious. The only transportation to and from the place would be by airplane. There would be no schools, no neighbors, no churches, no doctors, no markets, no roads in or out, no trading center. Life would hardly be worth living.

Since we are agreed that we don't want to cut ourselves off from such advantages, let us ask ourselves if we are doing all we can to create such advantages in the town near which we now live. These benefits do not come without encouragement. They can not exist unless the commercial life of the home community is in healthy condition. The conclusion is that it is very much worth our while to promote the interests of the home institution whenever possible and to trade with the local merchant when it does not mean a sacrifice to do so, service and quality considered.

VETERINARY

(Continued from page nine.)

veterinarian without incurring a lot of expenses for transportation. MRS. C. F. Waldron, Wash.

Considering the fact that it is nearly impossible because of the financial aspect to either bring in a veterinarian or take the horse away to a veterinarian for treatment, I would suggest blistering the ring bone once a month or every six weeks with the following blisters: Red iodide of mercury, one part; powdered cantharides, one part; lard, four parts and beeswax, one part. Have it well mixed and apply after the hair is clipped to the part with considerable friction. The animal's head should be tied up so it can not get its nose to the part and remove the blister, so that it will not blister the foot, but will blister the nose.

Apples for Cows—1. Are apples and mill run a good feed for cows or will the apples tend to decrease the milk flow? 2. Shoulld a fresh cow be milked dry the first milking? 3. Will dehorning a cow that is due to freshen in two months be likely to cause abortion? A. G. A. Pomona, Wash.

1. Apples make a good adjunct to grain and hay feeds for cows. Care must be taken to watch the results from the apples so that they do not purge the animal. They should be fed in limited amounts. They should be sliced or quartered so that they will not choke the animal. 2. Many good dairymen believe that the cow should not be milked dry at the first milking, especially if the cow is a high producer. 3. Dehorning a cow two months before she is expected to freshen may or may not cause her to lose the calf. This will depend entirely upon how she is handled, or how she handles herself during the operation. It would certainly be much more preferable and safer to wait two months before operating on her.

FARMERS' WANT ADS

AGENTS WANTED 9

AGENTS—MASON SOLD 18 SPRAYERS AND auto washers one Saturday; profits $2.50 each. Square deal. Particulars free. Rusler company, Johnstown, Ohio.

Baby Chicks.

"WHAT THEY SAY."—"YESTERLAID EGG Ranch, Kent, Wash. Dear Sir:—Is there any chance for 1200 chicks the 1st of April? Well pleased with your pullets last year. They laid between 50 per cent and 60 per cent since last October." Jack Sheridan. Greenacres, Wash. "Dear Sir: I bought 400 chicks of you last spring and will say they were the best layers I have. I would like to buy between 400 and 500 more next month. What time in February could I get them?" Mrs. Leonard Fossett, Dungeness, Wash. "Jan. 6th, 1922. Dear Sir: Enclosed find $7.50 as 15 per cent payment on 250 chicks. Our neighbor, Mr. Wood, got some from you last year and they certainly are good layers." William Stark, Coeur d'Alene, Idaho. We hatch 12,000 chicks every 5 days from our own wonderful trap nested White Leghorns. All of our 8000 laying hens are trap nested and bred to lay. We have 40 acres devoted exclusively to White Leghorns, all with wonderful egg records. More than 50,000 chicks already sold, but we still have good dates left if you book your orders at once. Send for price list and dates you would like chicks shipped. Yesterlaid Egg Ranch, Kent, Wash.

WHITE LEGHORN AND ILL-A-HEE BARRED Rock chicks—Buy chicks this year that live and grow and are bred to lay. Butler White Leghorns and Ill-a-hee Barred Rocks are known for high average flock production. Before ordering elsewhere, write for circular telling how our breeding methods produce 200 flocks for our customers. All stock trap nested and pedigreed. Also get our prices on breeding cockerels and hatching eggs for each breed. Address Butler Poultry Farms, or Ill-a-hee Poultry Farm, Jennigs Lodge, Ore.

THE PROGRESSIVE HATCHERY — BABY chicks from vigorous range bred stock; trapnested S. C. White Leghorns, $20 per 100; selected S. C. White Leghorns, $18 per 100; S. C. R. I. Safe, efficient, economically better chicks. Hatch for yourself or get chicks from hatcheries using Petaluma incubators. Write for our free catalog. Petaluma Electric Incubator Co., Petaluma, Cal.

BABY CHICKS; BEST WHITE LEGHORNS; free circular. Acme Poultry Farm, Dirston route, Cottage Grove, Ore.

FARMERS' WANT ADS

This is the farmers' "want," "sale" and "exchange" department for small advertisements of farmers, including live stock and poultry.

Advertising rates for ads running 1 to 3 times, 10c per word per insertion, with a special rate to Farmer subscribers, as follows: Ads running 4 to 12 times, 9c per word per insertion; ads running 13 times or more, 8c per word per insertion.

All commercial and land advertising 10 cents per word each insertion. Open also to nonsubscribers.

In using these columns advertisers must observe: (1) No advertisements will be inserted for less than $1.00. (2) Every word, number and initial, including name and address, must be paid for. (3) New advertisements, changes of copy or cancellations must reach general office, Spokane, Wash., 10 days in advance of publication date. (4) Cash must accompany order.

Above rates include insertion in The Washington Farmer, The Idaho Farmer and The Oregon Farmer, which constitute the Pacific Northwest Farm Trio, 46 Review Building, Spokane, Wash.

POULTRY—Baby Chicks (Continued) 174

A Stirring Story of Adventure

(Copyright by Harper & Bros.)

CHAPTER X.

A Townful of Indians: with how I hide the Cow, and think of Something which I don't believe the Indians will like.

When I saw what my visitors were I do not know if I was relieved or more frightened. I saw that I need no longer worry about the safe being robbed, but that seemed to be almost the only thing in their favor over the Pike gang. I knew, of course, that they had no ill feeling against me, and probably had no intention of harming any one; but, on the other hand, I well understood that if I should appear and try to stop their plundering the town they would not hesitate to kill me. By their dress I recognized them as Sioux from the Bois Cache reservation, 50 or 75 miles north, because I had seen some of them during the fall while they were on their way to visit some of their relatives a hundred or more miles south at the Brule agency. I supposed they were going for another such visit, and had blundered on the town. These Bois Cache Indians I knew were a bad lot; many of them had been with Little Crow in the great Sioux massacre in Minnesota in 1862, when hundreds of settlers were killed.

They came directly to the pile of things near their horses, and put down the rope; and then they started off in all directions looking for more plunder. Two of them came to the depot and walked about on the platform over my head. I flattened out on the ground and scarcely breaathed, expecting every minute that they would look under. I heard them talking and trying the windows. I thought they were going away; then there was a sound of breaking glass, and I heard them tramping about inside. Then they came out and went over to the pile again. I peeped out and saw that they had the two Winchesters which I had hidden in the depot. Another came from the town with a shotgun which he had found somewhere. I had no doubt that they would find and carry off every weapon there was, and leave me with nothing except the small revolver which I had in my pocket.

For an hour I lay there under the platform watching the Indians plunder the town. They already had much more in their pile than they could possibly carry away with the horses they had. Suddenly I saw that their plan most likely was to get everything they wanted together in the open square and then to burn the town, carry off what they could, and come back after the rest later on. Of course this put me in a great fright, but, though I racked my brain as never before, I could think of no way to prevent it.

Soon I heard a great pounding, and suspected that they were breaking into the headquarters barn, which I always kept locked, just out of force of habit. In another minute I knew I was right, as I heard a loud squawking of the chickens. Up from the direction of the barn and high over the roofs of the town I suddenly saw a bird soar, which I took to be a prairie chicken, or some sort of game bird, though where it came from I could not guess. Then, as it lit on the chimney of the blacksmith shop, and began a great cackling, I saw that it was only Crazy Jane. I could not help laughing, in spite of my troubles, and said out loud, "Ah, it takes somebody smarter than an Indian to catch her!"

The sight of Crazy Jane and the sharp way she outwitted the savages did me good and made me wonder if I could not do as well; still I could think of nothing. Just then the Indians came out with the other chickens in grain-sacks, and leading Dick and Ned and Blossom. The horses they stood with their own, but I was horrified to see that they acted as if they were going to butcher the cow. One of them pointed a gun at her head and another began to flourish a knife. It looked as if they had got it into their savage heads that they wanted fresh beef and were going to slaughter the poor animal on the spot.

To watch these preparations was, I think, the hardest thing I had to bear that day. She was a patient, gentle heifer, and I could not bear to think of seeing her butchered by a lot of villainous savages with less intelligence than she had herself. If I had had a gun or any fit weapon, I verily believe that I should have rushed out and defended her. But just before they began, one of their number came out of Fitzsimmons' store and called to them, and they all trotted over. The store was on the east side of the street.

At the instant that the last of them disappeared in the door I rolled out from under the platform and began to hobble across the square. My intention was to get behind the stores on the west side of the street; and I had a wild notion of saving the cow in some way, I did not know how. It was a foolhardy thing to do, but I got behind the first store without being seen. But I was no nearer the cow, who was a little ways from the side of Fitzsimmons', and I dared not go there. She saw me, however, and I held out my hand and said, "Come, bossy!" and she came over. I took her by the horn and led her along behind the buildings, knowing no more than a fool what I should do with her. Just then I came to the sloping outside cellar door behind a store. The Indians had cleaned the snow off of it, but had not succeeded in getting in, as it was fastened with a padlock. I tried my keys. One of them opened it. The stairs were not steep, and I led the cow down and closed the door above us. The Indians had walked and ridden everywhere in the square and back of the stores, so I thought it would be hard for them to follow the cow's tracks. Nevertheless, the

The Indians were standing where the cow had been.

next moment I hurried back and with an old broom brushed lightly our trail behind the buildings; then returned to the cellar.

I rested a few minutes till my ankle felt better, then I crept up the inside stairs to the store and peeped out the front window. Four or five of the Indians were standing where the cow had been, looking in all directions. After a while they all went back into Fitzsimmons' store and I slipped down and out the door by which I had got in, locked it, and made my way behind the buildings to the bank and went in. Here the Indians had not disturbed anything, there being nothing to their taste; but when I loked out a crack in the boards over the window I saw the whole 11 of them at the end of the street holding a powwow over the disappearance of their fresh beef. I thought it would be a good time to test my great pet, the tunnel, so I hobbled boldly through and entered the hotel.

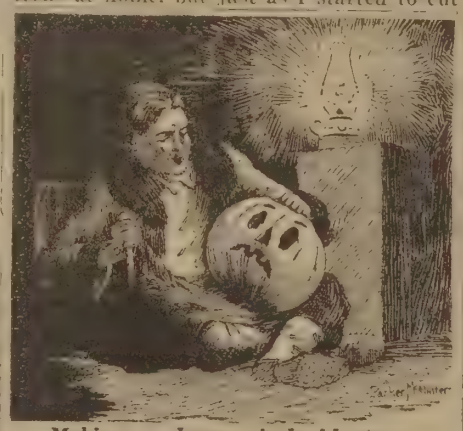
The first thing I saw was Pawsy in her old place over the dining room door. She did not seem to like Indians any better than she did wolves. Everything which had not been carried off was in the greatest confusion. The Winchester which had been under the counter was gone. I stood with my crutch looking at the wreck, when, without hearing a sound, I saw the knob of the front door turn and the door push open. With one bound like a cat I went through the open door of the closet under the stairs.

I had no time to close the door, and stood there pressed against the wall and trying not to tremble. It was dark in the closet, and that was my only hope. Three of the Indians filed by. They all wore moccasins, and their step was noiseless. They were talking, and passed on through into the kitchen and outdoors. I think they were looking for the cow, and took this as the best way to get to the barn. I pressed back farther in the closet and waited. Soon they came back, and again passed me, and went on out of the front door. I got out and crawled upstairs, thinking to find a better hiding place and wishing heartily that I was back under the platform. I looked out of an upper window and saw them all at the farther end of the street again. By-and-by they went into Fitzsimmons' store.

Though I did not take my eyes off the store for two hours I saw no more of the Indians, and by this time it was so dark that I could no longer see them if they did come out. I began to hear a strange noise, and opened the window slightly and listened. It was the Indians shouting and singing. Then it dawned upon me that they had found the whisky and that they were all getting drunk in Fitzsimmons' cellar.

This, of course, gave me a new cause of dread, for, if a sober Indian is bad, a drunken one is a thousand times worse. I felt sure that they would now set the town on fire through accident even if they did not intend to do so. The fiendish howling constantly grew worse and was soon almost as bad as that of the wolves ever was. I still could think of nothing to remedy matters. By this time it was pitch dark. I determined to have a look at them, anyhow. It occurred to me that probably they had begun at the whisky before the cow disappeared, and that this had helped to make their search unsuccessful.

I went down and out the back door of the hotel and crept along the rear of the buildings till I came to Fitzsimmons'. The yelling and whooping of those savages was something blood-curdling to hear. There was a window for lighting the cellar close to the ground in the rear foundation wall. A wide board stood in front of it, but I dug the snow away, pushed this board a little to one side, and looked in. They seemed to be having a free fight, and many of them were covered with blood. A smoking kerosene lamp stood on a box, and around this they surged and fought and howled. As I looked the lamp was knocked to the floor and blazed up. One of the Indians fell on it and smothered the flames, and the struggling and diabolical yelling went on in the dark.



As suddenly as the plan of making the skee sled had flashed upon me came another plan for driving every Indian out of town. I jumped up and ran away as fast as a poor crutch and a leg and a half could carry me.

CHAPTER XI.

I give the savage Indians a great Scare, and then gather up my scattered Family at the end of a queer Christmas Day.

How I ever got along through the darkness and snow on my crutch I scarce know, but in less time than it takes to say I tumbled in at the back door of the hotel. I went directly into the kitchen and felt about till I found a knife, which I put in my pocket. Then I stumped on into the office, leaned against the counter, and lit the wall lamp, took it out of its bracket, and made my way somehow to the cellar door. I left my crutch and fairly slid down the stairs, holding the lamp in both hands above my head. Once down I set it on a small box, dropped on the cellar bottom, and drew over to me the largest pumpkin in the pile against the wall. What I thought to do was to make the most diabolical jack-lantern that ever was, and scare the drunken savages out of what little wit they had left.

I took the pumpkin in my lap, and with the knife cut out the top like a cover. Then with my hands I dug out the seeds and festoons of stuff that held them. Then I turned up one side and plugged out two eyes and a long nose. I was going to make the corners of the mouth turn up, as I had always done when making jack-lanterns at home, but just as I started to cut

Making a demon jack-o'-lantern.

it came to me that it would look worse if they turned down; so thus I made it, adding most hideous teeth, and cutting half of my fingers in my haste. Then I gave the face straight eyebrows and a slash in each cheek just as an experiment, and looked around for a candle.

I could see nothing of the kind, nor could I remember ever having noticed one about the house. For a moment I knew not what to do; then my eyes rested on the lamp, and I asked myself why that would not do as well as a candle, or even better, since it gave more light. The hole in the top was not big enough to take in the lamp, but I cut it out more, and with half a dozen trials, and after burning all the fingers I had not already cut, I got the lamp in. The cover was now too small for the opening, but I grabbed another pumpkin and slashed out a larger one and clapped it into place. If I had had time I believe I should have been frightened at the thing myself, it was that hideous and unearthly-looking; but I did not have, so I took it under one arm, though it seemed half as big as a barrel, and pulled myself upstairs.

In another minute I was outdoors and hobbling along as fast as I could. The howling of the red beasts in the cellar still came as loud as ever. I got to the window, dropped on my knees, and took away the board. They did not yet have a light, and were struggling and caterwauling in the dark like, it seemed, a thousand demons. But I say I had the worst demon with me.

The lamp was burning well. I set the thing on the ground, square in front of the window, with the horrible face turned in and looking down into the darkness. Then I rolled out of the way.

I had truly thought that those savages had been making a great noise before, but it had been nothing to the sound which now came from the cellar. Such another shrieking and screaming I never heard before nor since. I would not have believed that any lot of human being could make such an uproar. Then I heard them fighting their way up the stairs and go squawking and bellowing out the front door of the store.

When I heard the last one go I seized up the pumpkin, took it on one shoulder, and with my stick went hippety-hopping out through the alley and along the sidewalk after them. They were going away in the darkness for their ponies like the wind. I went to the end of the walk and, holding the lantern in both hands, raised and lowered and waved it at them. Not once did they stop their howls of terror, and I could hear and partly see them tumbling onto their ponies in all ways and plunging off through the drifts to the west like madmen. I longed to be on Dick's back with my lantern to chase them, but I knew not where Dick was, and my ankle had already borne too much, as it told me plainly. I got back to the hotel as best I could, put up the lamp in its place and sat down to rest.

But though I needed rest, I needed food more; so I started the fire and looked about for something to eat. I soon found that the Indians had left nothing except a few crusts of bread and some frozen eggs. But I boiled the eggs and made out a sort of a meal. As I finished I heard a yowl which I thought I knew, and, sure enough, when I looked up, there was the cat still on the door.

This set me to laughing, and I said: "I wonder was ever a family so scattered before on a Christmas night as is mine? There is Kaiser shut in under a water tank; Blossom locked in the cellar of a grocery store; Crazy Jane, the hen, on top of the smoke-stack of a blacksmith shop;

FAMILY CIRCLE

ALICE BARLAND
EDITORIAL CONTRIBUTOR

Dear Mrs. Barland: I send a recipe for frozen feet and chilblains: Grind pumpkin seeds and mix into a poultice with warm milk and apply, leaving on for 12 hours or longer. This remedy works best when applied after the frozen parts are thawed. MRS. W. M. H.

Dear Mrs. Barland: I have a baby boy 2 1-2 years old and know something of a mother's work. I will add a few helpful hints for the Circle.

I make very good pajamas out of flour sacks for my little boy, using a pair of old overalls ripped up for a pattern. I also make his underwaists and underwear from them. I make shirts and drawers from worn underwear and little suits from men's suits which are worn past use. I made him a very nice winter coat last fall out of a wool skirt and it looked so well that every one thought I bought it and if I had done so I would have had to pay $12 for one as good.

Gunnysacks make good lining for rugs made of old coats and pants and are good for bedroom rugs. MRS. C. L. C.

Dear Mrs. Barland: I think Mrs. M. B. K.'s idea of exchanging ideas on child training is a grand one. I have a girl of 2 1-2 years and a baby boy of 10 months. I think a soft slap across the mouth of a child when he talks back in a saucy manner is a good way to break the habit. One need not slap hard; one should begin to break the habit at once when the child starts to talk back.

My little girl is always ready to "help" me to do what she can and also what she can't. She dries the knives, forks and spoons and she can put them on the table in proper order. I believe it best to allow a child to begin early to help with little things that he can do, whenever he wants to and then he knows how when he grows older.

I will give you a simple soup which makes a good supper dish for any age, but especially for children. It is called rubble soup. To make: Put on the fire three quarts of new fresh milk, let heat to a boiling point and have ready two cups of flour in a dish and break in two eggs and work up until it is all in small pieces, it may require more flour. Stir this into your hot milk and let cook till thick. Season with salt. (The juice of a grated onion makes this better.—A. W. B.)

MRS. GEORGE JENKINS.
Boring, Ore.

Dear Mrs. Barland: I always read with much interest the letters in the Circle. I used to live on a farm, but we are in a small town now.

The letters about the training of children are very good. I think too few mothers take time to reason and explain things to children as to why they should do certain things. Many times the poor children get a sound slap and don't know what it is for. I don't believe in spanking and slapping all the time. I think it much better to deprive the child of some treat if he has done wrong. Keep him at home from a show or a visit as a punishment.

I wonder why all parents do not teach their children to be kind to animals? It is easy to teach them to care for and to protect birds and all animals. Many parents allow children to have pets and permit them to torture the poor things. One friend of mine allowed her boy of 5 to abuse his kittens in a terrible way and when I spoke to her about it she said it was always easy to get more cats if he should kill one; it didn't matter.

My boy of 7 is a lovely companion for me. He can do dishes all by himself and dust and do other helpful things.

I would like to know why my cakes when baked are sometimes coarse and seem to dry out so quickly. I follow recipes closely and cream the sugar and shortening and beat the eggs well, but still they are coarse. E. K.

Your Health

By Royal S. Copeland, M. D., F. A. C. S.

HOW TO BATHE A SICK PERSON.

Cleanliness is the secret of health and long life. Spare the water and you spoil the child. Neglect the body and sickness is sure to come.

Dr. Copeland.

The patient's bath is one of the most important features of his treatment. Do you know how to bathe a sick person?

You should close the windows and let the room become warm. In the meantime gather all the needed things together. A small table or a chair should be placed near the bed. Spread over this a clean towel. Place on it a basin, a washbowl or a milk-pan. Also have a pitcher of hot water, a cake of soap on a dish, two towels and a wash-cloth.

Protect the bed from getting wet by stretching beneath the patient a clean blanket or a bath towel. This is easily done by rolling the patient to one side, placing the blanket and rolling the patient back into his original position.

Remove unnecessary overbedding, leaving just enough to keep the patient comfortable. Bathe and dry one leg at a time, leaving the rest of the body covered. Wash the patient's back last.

If the doctor should order a foot-bath this does not mean that the patient is to get out of bed to have it. The bed clothes may be loosened from the foot of the bed, the mattress and the linen or cotton sheet protected by a rubber sheet, or by a towel wrapped over a few layers of newspaper. Then place the foot-tub or pan in the bed and fill it one-third full with water, warm or hot, as the doctor directs.

After 20 minutes or half an hour the pan may be removed. In the meantime the water has been kept at uniform temperature by frequent additions of a little hot water; taking great care not to burn the patient. Dry the feet and rub briskly with a rough towel.

There should be frequent sponging of the hands and face. This adds amazingly to the comfort of a sick person. If he has fever, cold sponging lowers the temperature and relieves the aching head.

Perfect cleanliness will shorten the illness and promote the comfort of the sick person.

Just Folks

There is no easy harmony.

Sentiment is the final ruler.

Figures do not tell the whole story.

Tops of thoughts are most easily seen.

To be afraid is to lose three-fourths.

Ability without good will is perilous.

Geography tells a lot about the lives of people.

Opening the eyes is better than cramming the brain.

Something to tie to is better than all the freedom in the world.

Labored conclusions are necessary, but some one else has to do the work.

Promotion remains the biggest factor in our civilization, notwithstanding its gigantic abuse.

You can afford to be more or less associated with almost anybody in any worthwhile work. You can hardly afford to be associated even with the best of people, if the work is not worth while. E. A. S.

215 Jefferson St., Albany, Oregon

You wouldn't put on hobbles to run a foot race

Then why load up on handicaps for the day's work?

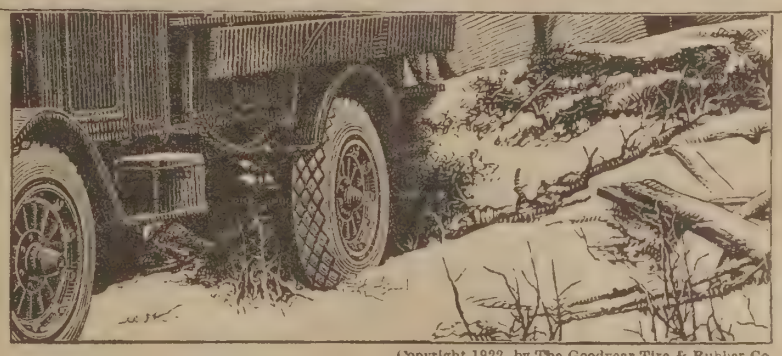
A good deal of food, unwisely chosen, does weigh the body down and clog the digestion, and dull the brain.

Why put on the hobbles?

Grape-Nuts is a breakfast or lunch-time dish for those who want food efficiency, and mind and body efficiency.

Grape-Nuts satisfies and nourishes. It delights the taste. It is ready to serve whenever you are ready to eat. And it digests easily, quickly and completely—leaving no handicap of heaviness and drowsiness.

Grape-Nuts is the food for health and action.



"There's a Reason"

ON THE ROAD EVERY DAY THIS WINTER

Copyright 1922, by The Goodyear Tire & Rubber Co.

"We get snow a-plenty in this section every winter, but our truck on Goodyear Cord Tires averages two capacity trips a day regardless of road and weather, cutting our wagon-haul time to South St. Paul Stockyards with livestock from more than three hours down to forty-five minutes."
—E. L. YETZER, Yetzer Bros., Farmers, Richfield, Minn.

Their sure-footed traction on snow-filled roads, maintaining regular deliveries throughout the months that once were closed to all farm hauling, is one of the most valuable advantages of Goodyear Cord Truck Tires.

Their All-Weather Tread, with its wide surface of sharp, gripping edges, gives them a firm hold on slippery surfaces and in thick, slushy going.

Their buoyant resilience favors the truck mechanism, cushions the driver and the load, and protects improved roads.

The durable qualities incorporated in these tires by their exclusive Goodyear design and construction prolong their all-season, all-weather usefulness through thousands on thousands of miles.

Actual experiences of farmers hauling on Goodyear Cord Truck Tires are reported to those interested by The Goodyear Tire & Rubber Company, Akron, Ohio, or Los Angeles, California.

GOODYEAR

High Points in News of the Week

Pope Benedict, head of the Roman Catholic church, died Sunday morning, January 22, at the church headquarters in Rome. Death resulted from pneumonia, following a comparatively brief illness. Pope Benedict was the 259th successor of St. Peter as supreme head of the Roman Catholic church. He became pope September 6, 1914, soon after Europe entered upon its four years of war. His conduct of the affairs of the church was a task of great difficulty because of the complications arising from the war. Upon several occasions he initiated steps by means of which he hoped to be able to bring the warring nations to a peace agreement.

No successor has yet been named by the church authorities. Cardinal Gasparri, papal secretary of state, has been mentioned as a possible successor.

* * *

The joint commission of agricultural inquiry in congress has filed a report in which it urges the necessity of more liberal credit to the farming industry, especially through the federal land bank in the form of short-term loans on farm products in addition to its present long-time loans on farm land. It is suggested that loans of this character be made to members of farmers' cooperative organizations, when organized under state laws, such loans to be secured by warehouse receipts on farm products. Notes given to cover such loans would be used as security for bonds to be offered to the general public for sale in the same manner that farm land bank bonds guaranteed by mortgages are now sold to the public as a means of raising additional funds to be loaned.

* * *

A meeting between Michael Collins, head of the Irish provisional government, and Sir James Craig, premier of Ulster, is understood to have laid the groundwork for a peaceable settlement between north and south Ireland. It is not to be understood, however, that this agreement requires Ulster to become a part of the new Irish Free State.

* * *

A movement has been launched by the shipping industry of the Pacific coast for the formation of an organization to take over all merchant ships now owned by the United States government on the Pacific and operate them under private management. The proposed organiation would include representation and financial support of all the leading Pacific coast and Puget sound ports.

* * *

Europe this year will require huge imports of American foodstuffs, the department of agriculture annnounces in making public a summary of the report of G. F. Warren and W. F. Callander, who have made a study of European agricultural and market conditions. Germany alone, it was said, will need 2,000,000 tons of imported foods and the United kingdom, France, the Scandinavian countries, Czecho-Slovakia, Austria, Italy and Switzerland are looking to America for great quantities.

Excellent yields of wheat and rye were obtained before the severe drought of last spring developed, the investigators reported, but barley, oats, corn, potatoes, sugar beets and fodder crops were extensively damaged.

* * *

The intense cold weather that visited the northwest last week moved south the latter part of the week and did heavy damage to the orange and lemon groves of California. For the first time in 40 years snow fell in the vicinity of Los Angeles.

* * *

For the first time since he was stricken with illness, over two years ago, Woodrow Wilson, former president, appeared in public in attendance at a recital given in Washington last week for the benefit of the disabled veterans.

* * *

A conference of the southern group of the American Farm bureau federation at Florence, Ala., last week, went on record in favor of the government granting to Henry Ford the lease that he is now seeking on Muscle Shoals for the development of water power and nitrate fertilizers.

* * *

Will Hays, postmaster general in President Harding's cabinet, has announced his resignation, to take effect March 4. Mr. Hays resigns to accept the position of director of the National Association of Motion Picture Producers and Distributors. No definite information is available as to the probable successor of Mr. Hays in the president's cabinet.

* * *

The nation-wide strike of coal miners have been threatened, to take place about April 1, when the present national agreement covering wages and working conditions expires.

Farm Business and Markets Outlook

(Continued from page five.)

36c; Philadelphia, 36c; San Francisco exchange quotation, 41c.

CHEESE PRICE OUTLOOK IS STEADY.

Although cheese prices have declined slightly cheese dealers do not anticipate pronounced changes in price levels either way.

A clearance has been made of supplies of cheese in dealers' hands and further withdrawals made from cold storage, although slight concessions were necessary in some cases. Demand for held twins and daisies remains a conspicuous feature.

Prices for fresh No. 1 American cheese on January 18 were:

Chicago—Twins, 20@21c; flats, 21@21 1-2c; S. Daisies, 21@21 1-2c; D. Daisies, 20 1-2@21c; square prints, 23@24c.

FRUITS AND VEGETABLES.

Shipments from the potato producing sections have increased since the first of the year. Prices held up and even advanced for a time, but finally weakened. Northern round whites sacked red quoted at $1.70 to $1.90 per 100 pounds f. o. b. Growers are receiving $1.15 for sacked Rurals in wagonloads at Idaho points. Consuming markets are quoted at a range of $1.95 to $2.35 for sacked round whites, eastern cities being about 25 cents higher than Chicago. Seed potatoes are quoted at $3 per 100 lbs. for Bliss Triumphs, f. o. b. Minnesota shipping points.

Apple markets have held nearly steady with Baldwins at $6.50 to $8 per barrel wholesale in city markets. Northwestern extra fancy Jonathans are quoted at $2.25 to $3 per box in New York and Chicago. Shipments from producing sections have increased.

Cold storage holdings of barreled apples in the United States on January 1 amounted to 1,727,000 barrels compared with 3,966,000 barrels last year and a five-year average on January 1 of 2,935,000 barrels. Holdings of boxed apples were 10,990,000 boxes compared with 7,259,000 boxes last year and a five-year average of 6,159,000 boxes. Total holdings are about the same as the five-year average.

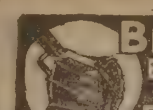
WINTER WHEAT CONDITIONS.



Covering the crop conditions for the last half of December the United States bureau of markets and crop estimates finds that the condition of the winter wheat crop is generally good throughout the eastern and north central states. The condition of the crop is poor in Nebraska and Kansas and late seedings are poor in Oklahoma and New Mexico, where many fields have failed to germinate. The condition in the eastern part of Oregon is much improved by recent rains, but excessive soil moisture is causing some damage in the western districts.

MARKETING HORSES.

The North Dakota Farm Bureau federation is marketing horses in New York state through the cooperation of the New York Farm Bureau federation. According to Secretary H. B. Fuller, North Dakota has a surplus of 48,000 horses, half of them suitable for eastern markets.

BETTER GARDENS
EASY TO KILL WEEDS AND MULCH THE SOIL
BARKER WEEDER, MULCHER AND CULTIVATOR
Don't do garden work the slow, backbreaking way. The BARKER makes the finest gardens possible—quickly, easily. Simply push along (like lawn mower) —8 blades revolving against underground knife destroy the weeds and in same operation break the crust into a level, porous, moisture-retaining mulch. Aerates soil. "Best Weed Killer Ever Used." Has leaf guards, also shovels for deeper cultivation. A boy can run it—do more and better work than 10 men with hoes.

Write for FREE BOOK
Illustrated book, postpaid, gives prices delivered to your station, contains valuable information on gardening, letters from users, etc. A card brings it. Write today.

A. A. Berry Seed Co., Box 967 Clarinda, Iowa

Writing to Advertisers Is Profitable

One of the most valuable and interesting parts of your state farm weekly is that devoted to the advertisements. Here you find live news about improved implements, up-to-date tools, high-grade food products and many other articles which add to the pleasure of living or the efficiency of working in the home or field.

You will find it profitable to become an habitual reader of the advertisements, especally so if you write the advertisers to send you copies of the catalogues, booklets and other free literature which they gladly supply. When you do write for such information, please mention the fact that you saw the manufacturer's advertisement in THE WASHINGTON FARMER.

Just What You Want
may be offered in this week's want ads at a bargain. It's a good idea to look them over every week

Bits of Fun for Everyone

Farming a la Movie.

Visitor—You must have been visited by a bad hurricane from the appearance of your buildings.

Farmer—No; I rented my farm last month to a movie concern to make a five-reel comedy.—Film Fun.

Where Do You Get the Holes?

Old Salt—"Well, sonny, do you know how we make fish nets?"

Jimmy—"Yes; you just take a lot of holes and sew them together."

The New Week.

Teacher—"Tell me, Freddie, how many days are there in a week."

Freddie—"Six and a half, Ma'am."

Teacher—"What do you mean, Freddie?"

Freddie—"Because Saturday always passes twice as quick as the other days."

Another Fish Story.

Sir: Speaking of O. F. letters, I claim to have unearthed one that should win the steam-heated cuff links. It ends: "In the everlasting mud-puddle of your affections let one little tadpole wiggle for me."—Nashville Tennesseean.

Let's Blow Ourselves.

The government has on hand 12,000,000 pounds of picric acid that will be distributed to farmers. Picric acid, we had understood, is a high explosive. What farm product is going up now?—Cleveland Plain Dealer.

Much Taken With It.

Mrs. Swellman—I want you to make my bathing suit this summer. I was much taken with the one you made me last season.

Dressmaker—Indeed!

Mrs. Swellman—Yes, the camera fiends simply camped on my trail.—Boston Transcript.

Beyond Him.

Kenneth—Father, what are ancestors?

Father—Well, my son, I'm one of yours. Your grandmother is another.

Son—Then why do people brag about them so much?—Edinburgh Scotsman.

Latest High Class Patterns for the Home

Please order the patterns you desire at least two or three weeks before you wish to use them. Desiring to obtain the latest high-class patterns for its readers, THE FARMER has made arrangements to have them sent direct from the east, and under present mailing conditions it takes about that time for them to reach you.

3658. A practical seamless apron. Cut in four sizes: Small, 34-36; medium, 38-40; large, 42-44; extra large, 46-48 inches bust measure. A medium size will require 2 5-8 yards of 36-inch material. Price 10 cents.

3848. Ladies' house dress. Cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. A 38-inch size requires five yards of 36-inch material. The width of the skirt at the foot is about two yards. Price 10 cents.

3851. Ladies' dress. Cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. A 38-inch size requires 4 3-4 yards of 40-inch material. The width at the foot is 2 1-8 yards. Price 10 cents.

3847-3696. Ladies' coat suit. Coat 3847, cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. It will require 2 1-2 yards of 54-inch material for a medium size. Skirt 3696, cut in seven sizes: 24, 26, 28, 30, 32, 34 and 36 inches waist measure. It will require 2 5-8 yards of 44-inch material for a 28-inch size. The width of the skirt at the foot is about two yards. Two separate patterns, 10 cents for each pattern.

3130. Girl's apron. Cut in four sizes: 6, 8, 10 and 12 years. For an 8-year size 1 3-4 yards of 27-inch material will be required. Price 10 cents.

3685. Misses' dress. Cut in three sizes: 16, 18 and 20 years. An 18-year size requires 4 7-8 yards of 38-inch material. The width of the skirt is 2 3-4 yards. Price 10 cents.

3865. Girl's "jumper" dress. Cut in five sizes: 4, 6, 8, 10 and 12 years. A 10-year size requires 2 1-2 yards of 27-inch material for the guimpe and three yards for the dress. Price 10 cents.

3409. Girl's dress. Cut in four sizes: 8, 10, 12 and 14 years. A 10-year size will require 4 3-4 yards of 36-inch material. Price 10 cents.

3834. Ladies' undergarment. Cut in four sizes: Small, 34-36; medium, 38-40; large, 42-44; extra large, 46-48 inches bust measure. A medium size requires 2 1-4 yards of 36-inch material. Price 10 cents.

3479. Ladies' undergarment. Cut in four sizes: Small, 32-34; medium, 36-38; large, 40-42, and extra large, 44-46 inches bust measure. A medium size will require 3 3-4 yards of 36-inch material, or 3 1-8 yards without the yoke. Price 10 cents.

3034. A popular style. Cut in four sizes: 2, 3, 4 and 6 years. Size 4 requires 2 5-8 yards of 44-inch material. Price, 10 cents.

3859. Girl's dress with bloomers. Cut in four sizes: 4, 6, 8 and 10 years. An 8-year size requires 1 1-4 yards of 27-inch material for the bloomers and three yards for the dress. Price 10 cents.

POST CARDS BRING BIG RETURN

Many of our advertisers offer free booklets and information which is very much worth your while to send for. A postal will bring them. Why not place a dime or so in your rural mail box with a note requesting the carrier to leave you some cards? Then use the cards in writing advertisers. When you do so be sure to mention THE WASHINGTON FARMER.

Melvin Mathias' uncle gave him two sheep for which to care. Their names are Jenny and Susie. Melvin's grandpa has about 50 chickens, two pigs, three calves and three cows. He has some bees and good honey. Melvin's home is on the Cowlitz river, in Washington.

Brown-eyed Ruth Wagner has never written to us before. She lives in eastern Washington and is 11 years and 8 months old. Ruth has no brothers and sisters. She has light brown hair. Tommy is her pet cat. He is gray.

THURSDAY, January 26—Dorothy Kidwell, 10 years old; Lucile Lemmon, 7.

FRIDAY, January 27—Winifred Angle, 11 years old; Lawrence Blessing, 11; Lila Lackey, 11.

SATURDAY, January 28—Jane Frazier, 10 years old; Clara Nelson, 11; Ora Shaver, 11; Bernard Boone, 10.

SUNDAY, January 29—Gertrude Dagefoerde; Gladys Haines, 10 years old.

MONDAY, January 30—Evelyn Anderson, 10 years old; Hilma Hoikka, 9.

TUESDAY, January 31 — May Mary Brown, 11 years old; Inez M. DeGooyer, 9; Bertha Stevens, 10; Metha McDanile, 8.

WEDNESDAY, February 1—Russell Higginbotham, 11 years old; Eva Howell, 10.

In each issue a list of the cousins' birthdays for the week will be published. At the close of each letter you write be sure to tell how old you are and when your birthday comes.

BEDTIME STORIES

By THORTON W. BURGESS.

Copyright, 1919. T. W. B.

JERRY BEGINS TO BUILD.

Jerry Muskrat had been round and round the Smiling Pool and up and down the Laughing Brook looking for a place to build his new house. He was very particular, was Jerry Muskrat, about the place where he was to build. It had got to be just so. Billy Mink and Little Joe Otter had shown him a dozen places which they thought would be splendid for Jerry's new house. Each time Jerry had shaken his head and kept right on looking. Finally Billy Mink and Little Joe Otter had gone off in disgust.

"He doesn't know what he wants himself!" said Little Joe Otter. "Let's go fishing."

"Bet I can catch more than you can!" cried Billy Mink, and off the two little brown-coated scamps started, leaving Jerry Muskrat to keep on looking for a place to build.

Now, Jerry Muskrat did know what he wanted; he knew just what he wanted. It must be a place where the water would be still, for you see if there was a current it would carry away the things of which the house was to be built. It must be a place where the water was deep enough for Jerry to have one nice snug room wholly under water, with a door at the bottom. And the water must be so deep that Jack Frost would not be able to freeze it into ice clear to the bottom and so close up that little door down there for that door must be open all the time. And yet the water must not be so deep that Jerry's new house could not have its room and a nice snug, dry bedroom quite above the little waves which the wind made.

Finally over among the bulrushes Jerry found just the place.

Finally, over among the bulrushes Jerry Muskrat found just the place for which he was looking. He put on his old clothes, took a long breath, and down he went to the bottom and began to cut away the rushes that were growing where he wanted his house to be. It was hard work, and every few minutes Jerry had to come up for a breath of fresh air and to rest. He could hear Billy Mink and Little Joe Otter having a beautiful time down the Laughing Brook, and he did so want to join them. But down inside something would keep telling him that he must build his house first. So Jerry would take a long breath and down he would go.

Pretty soon all the bulrushes that had been in the way were cut and nicely piled at one side. Then Jerry began to dig out his cellar. My, my, my! It certainly did make the water dreadfully muddy! By and by all the Smiling Pool was muddy, and then the muddy water got down to where Billy Mink and Little Joe Otter were fishing. At first they couldn't think where it came from. Of course it spoiled their fishing, for they could no longer see the fish. In disgust they went back to the Smiling Pool. It was even muddier than the Laughing Brook. Then way over among the bulrushes Billy Mink saw the water boiling up as if there was a terrible disturbance down underneath. A minute after up popped the head of Jerry Muskrat.

"Hi, Jerry Muskrat! You're spoiling our swimming water!" shouted Billy Mink, angrily.

"It don't belong to you," shouted Jerry Muskrat, and once more disappeared.

Track's End

(Continued from page fourteen.)

the rest of the chickens sacked up and scattered on the ground; Dick and Ned, the horses, I don't know where; Pawsy, the cat, on top of the door; and Jud himself, the head of the family, here eating what the Indians have left, with a hurt ankle and a smell of roasted pumpkin all through his clothes."

I had a good laugh over things, and then decided that I must do what I could for my scattered family, though my ankle seemed about ready to go by the board. So I first got down the cat and then lit the lantern and started out after Kaiser. Poor dog, he was beside himself to see me, and liked to have knocked me down in showing how glad he was.

As we started back Kaiser stopped and began to growl at something out on the prairie, and I looked, and after a time made out Dick and Ned. They were very nervous, and would not let me come up to them, but I toiled around them at last and started them toward their barn. I next looked after Blossom. I found her lying down, as comfortable as you please, chewing her cud and right at home in the cellar. She had made a meal out of the coarse hay which came out of a crockery bale, and I thought I would leave her for the night. So I took a big pitcher out of the bale and milked her then and there, and took it home, and Kaiser and Pawsy and I disposed of it without more to-do.

I was beginning to feel better about my family, and still more so when I found that Dick and Ned had gone into their stalls and had stopped their snorting and only breathed hard when they saw me. Next I went after Crazy Jane, but though I coaxed and shooed and threw chunks of frozen snow at her, while Kaiser barked his teeth loose, almost, it did no sort of good; she only looked at me and made a funny noise, as a hen does when she sees a hawk. I could not climb up with my hurt ankle, so I had to leave her; much against my will. The chimney, I thought, was a good deal exposed for a sleeping place in winter, but there was no wind and I didn't have much fear but that she would come out all right.

I had like to have forgotten the other chickens; they never popped into my mind till I was back in the hotel, but I dragged myself out after them. I found the poor things stuffed in three sacks, as if they had been turnips, lying on the snow. I knew I could not carry them, and felt that I could scarce drag them even, so I hit upon the plan of taking a bit of rope from the pile of plunder and hitching Kaiser to the sacks, and so in that way we got them, one by one, to the barn at last and let them out, all cramped and ruffled. Kaiser was so proud of his work that he set up a bark which started the broncos into another fit of snorting.

I think if there had been one more member of my family lost that I could have done nothing for it that night, my ankle was in such a state. I tried bathing it in hot water, and before I went to bed I had it fairly parboiled, which seemed greatly to relieve it. I was too tired to go across the drawbridge to my room, so I stretched out on the lounge in the office, not much caring if all the robbers in Christendom came. But I could not help wondering at my strange Christmas, and half the night I heard the wolves howling around the blacksmith shop and looking up (I knew) at Crazy Jane, but I thought they might as well howl around the gilt chicken on a weathervane for all the good it would do them.

(To be continued.)

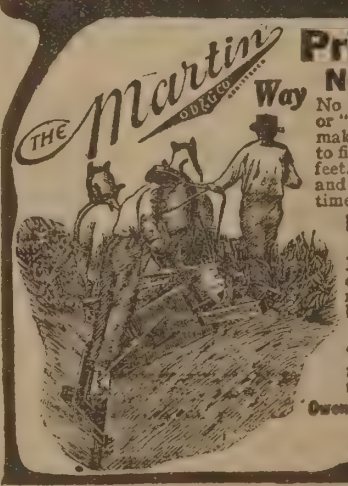
WESTERN CANADA Land of Prosperity

offers to home seekers opportunities that cannot be secured elsewhere. The thousands of farmers from the United States who have accepted Canada's generous offer to settle on FREE homesteads or buy farm land in her provinces have been well repaid by bountiful crops. There is still available on easy terms

Fertile Land at $15 to $30 an Acre

—land similar to that which through many years **has yielded from 20 to 45 bushels of wheat to the acre**—oats, barley and flax also in great abundance, while **raising horses, cattle, sheep and hogs** is equally profitable. Hundreds of farmers in western Canada have raised crops in a single season worth more than the whole cost of their land. With such success comes prosperity, independence, good homes and all the comforts and conveniences which make life worth living.

Farm Gardens, Poultry, Dairying



are sources of income second only to grain growing and stock raising. Attractive climate, good neighbors, churches, schools, good markets, railroad facilities, rural telephone, etc.

For illustrated literature, maps, description of farm opportunities in Manitoba, Saskatchewan, Alberta and British Columbia, reduced railway rates, etc., write

Important Sales Coming

One of the largest Holstein sales in the history of the Pacific northwest, and one notable because of the prominence of the two herds that will be offered, will be held at Granger, in the Yakima valley February 6 and 7. The herds are those of H. C. Davis of Granger and Butchart Bros. of Sunnyside. The sale includes some of the most notable animals of the northwest, both as to show and production records. At the head of the Davis herd stands Sir Bessie Fobes Tritomia, one of the leading herd sires of the west. At the head of the Butchart herd is the younger and promising bull, Chief of the Ormsbys. Colonels George Gue of Yakima, George Gouchnour of Sunnyside and W. C. Payne of Centralia will cry the sale, which will be managed by Mr. Davis,

The Yakima Valley Duroc Jersey association, which was organized a little over a year ago, will hold a sale on February 9 at Sunnyside, Wash. About 30 head, mostly bred gilts, with a few sows, will be sold. Pathfinder, Great Wonder and Sensation breeding predominate. H. W. Turner, F. D. Gano and H. and H. Bagley of Sunnyside; S. D. Cornell, Grandview; C. T. Myers, Prosser, and J. M. Price of Yakima are the consignors. Mail bids may be sent to W. R. White, fieldman of the association at Sunnyside.

On account of having to move, W. A. Mays of Toppenish, Wash., will disperse his entire herd of big type Poland Chinas. The sale will occur at Mr. Mays' farm, four miles east of Toppenish, on Wednesday, February 9. About 46 head will be sold. Of these 32 are young bred sows. Five are boars and this includes Mr. Mays' two great sires, Western Designer and Buster Clansman. Nine fall gilts will be sold.

Breeders' Dept.

ABERDEEN-ANGUS

bulls will mature your steers earlier, give them a heavy, thick and low set conformation, dehorn them and add to their quality so that they will top the market every time. We have a wonderful lot to select from, both range and herd bulls, at prices which will move them.

CONGDON & BATTLES.

THE WASHINGTON FARMER

SUCCESSOR TO

Vol. 46. No. 5 THE RANCH PACIFIC DAIRYMAN HORN AND HOOF February 2, 1922

For Good Farming, Attractive Country Homes and Happy Country People

Pacific Northwest Is Favored

Farmers Wipe Slate and Are Looking Forward With Increased Courage

Charles Hebberd of Spokane, who was food administrator for the state of Washington under Hoover during the war, spoke hopefully of the future of agriculture in the Pacific northwest in a recent address. Mr. Hebberd directed attention to the cheering fact that unusual rainfall and snowfall throughout the Inland Empire give promise of large crops in 1922. Production costs on the farm, he pointed out, have been brought back approximately to the pre-war basis, so that with abundant crops the farmer in the fall of 1922 will face a very different situation from that which he faced in the autumn of 1921.

Mr. Hebberd said that normally the Inland Empire of the Pacific northwest, which takes in parts of Washington, Oregon, Idaho and Montana, produces one-twelfth of the wheat crop of the United States. Last year it produced one-ninth.

Ordinarily the state of Washington produces one-seventh of the commercial apple crop of the United States. In 1921 it produced one-third of the crop.

In this region of the Inland Empire the average grain yield is 36 per cent higher than the national average. The average hay yield is 52 per cent higher, and the average potato yield is 49 per cent above the national average.

Mr. Hebberd also touched upon the diversity of resources of this region, which increases the home market for farm products. He said that in this Inland Empire are 200 producing mines and 800 sawmills. The Pacific northwest has one-half of the nation's remaining timber and one-fifth of its potential water power.

THE FARMER is glad to present this optimistic picture of the coming year and of the future of agriculture in the Pacific northwest. The farmer who owns a piece of good land in this favored region is fortunate, we believe, above his fellow-farmers in other parts of the country.

In fact, the farmers of the Pacific northwest have come through the severe trial of readjustment of prices in more fortunate circumstances than the farmers of any other region in the United States. The wheat growers have been much more fortunate than the corn growers of the middle west or the cotton growers of the south.

Here in the Pacific northwest we had a fine fruit yield in 1921, when the fruit crop of the rest of the country was cut down by frost and other adverse conditions. Another cheering fact is the surprisingly quick recovery of the wool market and the sheep industry. All things considered, the outlook for the farmers of the Pacific northwest is bright for 1922.

From the foregoing it is seen that large yields are now indicated for the Pacific northwest in 1922. At the same time the indications are favorable for a continuing heavy foreign demand for the surplus food products of the United States.

The need for our foodstuffs in European countries reaches many millions of tons, report G. F. Warren and W. F. Callander of the United States department of agriculture, recently returned from the study of agricultural and market conditions in Europe. Germany alone will require 2,000,000 tons of imported foods before the next harvest. Czechoslovakia, Austria, Italy and France are also looking to America for huge quantities to supplement their own supplies.

The severe drought that occurred in Europe last spring damaged pastures and fodder crops to such an extent that in some countries live stock was sold off as a result. Such sales tended further to depress the meat markets. The drought also delayed the planting of winter wheat until the late rains came. The area seeded was reduced and in much of Europe the sowing was done after the best date for seeding, so that the crop next year will be injured unless the winter is very favorable.

Although the production of wheat and rye in Europe in 1921 was much above 1920, a large amount of grain must be imported before the next harvest. The consumption of the new crop began about a month earlier than usual; the fodder, root and potato crops are smaller than usual; the condition of the fall-sown crop of wheat and rye is not satisfactory, so that the farmers are inclined to hold over some of this year's crop.

The wheat crop in the British Isles this year was large, but reports state that most of it has been consumed. Probably imports will continue at nearly the usual rate.

The German needs for the remainder of the year were given on November 1 as approximately 2,000,000 tons. Very little has since been imported.

On December 1 the needs of Czechoslovakia were stated by officials to be 250,000 tons.

Austria is importing and will need to import 50,000 tons of grain a month for the balance of the year.

The needs of France will be dependent on the amount held by farmers, but probably an importation of 500,000 tons will be required.

It is stated that Italy will need about 1,000,000 tons in addition to her own crop in order to furnish a normal supply to her people.

The United kingdom and Holland have been heavy importers of corn during the year and will probably continue to import.

If the results of the national farm conference in Washington, D. C., makes headway in promoting price leveling and price stabilization for farm products, then the outlook for large yields and the forecast of European needs, will give the basis for regarding the future with even a larger degree of optimism.

Wheat Growers Look Forward

Confidence and Determination Are Expressed at Convention

"If we can imagine ourselves 20 years from today looking back at the difficulties now encountered by the farmers we would realize, I believe, that these very difficult times are a powerful incentive to progress, and that as a result of them, agriculture became more efficient, acquired universal recognition and became more firmly established and more attractive than at any other period in the history of our country."

The foregoing is a statement typical of the spirit that prevailed at the recent annual convention of the Washington Grain Growers, Millers and Shippers' association at Spokane. It is from the address of Dean Edward C. Johnson of the college of agriculture of the state college. Kindred sentiments were expressed by President Alfred Atkinson of the Montana Agricultural college, by Governor D. W. Davis of Idaho, by Professor George Severance of the State College of Washington and by others on the varied program.

The convention was held in Spokane for the first time this year, the previous 14 annual sessions having been held in Pullman, the home of the college. Many expressions of regret that the college was not again host were heard, but the convention was declared to be one of the most successful yet held. The next session will be held in Spokane.

Officers chosen for the coming year are as follows:

Robert McCroskey Jr., Garfield, president.

Harvey Burns, Reardan, vice president.

Professor E. G. Schafer, Pullman, secretary-treasurer.

Executive committee: W. J. Jordon, Lewiston; Dan Fisher, Spokane; Walter J. Robinson, Pomeroy and Spokane; B. B. Gillispie, Ritzville.

Dean Johnson, outgoing president, in his address reviewed the history of the agricultural industry with special discussion of present conditions. His conclusion was a statement of confidence and a challenge to those who farm:

"There has been great progress in the agriculture of this country," he said, "a progress which, though handicapped by an occasional setback, is still going on. Many problems are yet unsolved, but there are many workers. The attention of the nation in a large measure is directed to them. Out of it all should come a more efficient agriculture, better conditions for the agricultural industry as a whole, greater opportunities for those engaged in working on the land and the highest type of citizenship in the homes of the open country, a citizenship which is, after all, the backbone of our civilization."

Must Face the Condition.

President Atkinson's message to the farmers and to the people as a whole was to face the conditions that exist and take hold of the task before them with a determination to restore normal industrial and civil life. "Agriculture," he said, "has always suffered following war. Europe, after her many wars, can better understand that than we. The war has diminished the world's wealth by $300,000,000,000, or an amount equal to all created wealth of the United States. We are not going to have the former conditions back in all their aspects until we can build up again that destroyed wealth."

He reminded his audience that with our boys in the trenches we did not do so much thinking about the cost of what they need as about getting the things delivered. For the extravagances of those days some one must pay.

He emphasized Secretary Wallace's analysis of the present agricultural difficulties, as due to four causes. They were: (1) Conditions prevailing in foreign trade; (2) high freight rates and the present long and short haul adjustments; (3) surplus production and carry-over from large crops, the results of agricultural momentum attained under war conditions, and (4) unemployment, decreased consumption.

J. K. McCornack, president of the Union Securities company of Spokane, declared that the producer's need is better prices rather than more credit. "No one can borrow himself out of debt," he said. "The wheat grower has now so far taxed his credit that the banks are with difficulty seeing him through, but if the farmers go to the wall the banker goes with them." Bankers should fearlessly advise against assuming too heavy obligations, even for land purchase, and should refuse to handle notes given in purchase of worthless stocks or questionable investments. The wheat growers' obligations run in high figures today, said Mr. McCornack, and what one expects or hopes to raise next year and the next is not first-class collateral. Banks must select the best risks. When farmers avoid debt they are the most independent class of men, but they are not safe until they set up a cash reserve or carefully conserve their credit for emergency. We realize, he said, that recent cost of production has been above the ruling prices for the farm's commodities, and the banker should do all he safely can to take care of prodcuers' needs and the producers all they can to get back to a safe basis of operation.

F. C. Forrest of the First National Bank of Pullman discussed the services of the war finance corporation to the producer.

W. B. Armstrong of Yakima, president of the state farm bureau, expressed the opinion that we are on the threshold of an entirely new agricultural era. Never, he said, had such numbers and powers been organized in the same way as through the farm bureau.

Speaking of the agricultural bloc in congress, he said: "The agricultural bloc is not functioning merely in the selfish interests of the farmer. It was not even an organized bloc until organized opposition was met. But we have, in the farm bureau and the agrarian bloc a system entirely different from any we have had before. The farm bureau had its trained departmental heads at Washington. Senator Smoot, the principal proponent of the sales tax, was haled before it, and admitted upon cross-examination that there was no possibility of the farmer's passing on the sales tax. Farm bureau research found that the farmer is the buyer of some 70 per cent of the nation's domestically consumed goods; that the farming population comprised 30 per cent of the nation. And the farm bureau said, "30 per cent of the people are not going to pay 70 per cent of this sales tax."

William T. Harshman, a milling chemist of Spokane, presented some of the aspects of different varieties of wheat

(Continued on page twenty-six.)

Conference at Washington

The five-day agricultural conference held in Washington, D. C., last week, accepted as a basis upon which solution of the agricultural problem must be found the fact that there must be a leveling as between the prices the farmer gets for his products and the prices he must pay for the things he uses.

The conference adopted a number of recommendations which will go before President Harding, Secretary Wallace, the war finance corporation, the federal reserve board, congress and other governmental agencies for action.

The conference went on record as favoring any necessary amendment to the federal reserve act and to the farm land bank act to provide for agriculture short-time credit of from six months to three years, secured by warehouse receipts and other commodity guarantees.

It is also recommended that the war finance corporation be continued, with authority to advance money for agricultural purposes until such time as more adequate means of finance is brought about. Other recommendations of the conference are as follows:

The repeal of the 6 per cent earning guarantee clause of the transportation act.

Acceptance by the government of Henry Ford's offer to lease and to develop the Muscle Shoals power and the nitrate plants.

Reduction in railroad wages and freight rates.

The development of the so-called St.

(Continued on page twenty-four.)

Beef Cattle Business Looks Up

About four or five months ago, when the live stock business was at about its lowest ebb, Frank M. Rothrock of Spokane, who has buffeted the storms and sailed the smooth seas of the live stock business in the Pacific northwest for 25 or 30 years, looked into the future and saw promise of better times. In a published article last September he said: "It seems to me we are around the corner and that the future holds out promise to us. We are engaged in a business the fundamental and essential character of which can not be challenged. It is one worthy of our best efforts, one which has been remunerative in the past and will be sufficiently remunerative in the future."

The behavior of the live stock markets during the last few weeks further convinces Mr. Rothrock that he was right at that time.

"Since that article was written," he said last week, "the price of hay has descended to almost the lowest levels ever known, as there was inadequate live stock in the country through which to market it. Coincident with this drop in the price of hay and other feed, the price of cattle has steadily increased. At the time I wrote the article referred to prime steers were worth from 4 1-2 to 5 1-2 cents on the Spokane market. Today the same steers would bring 7 1-2 cents. Six cents is now frequently paid for good beef cows. The scarcity of stocker cattle makes it difficult to purchase them. The great, unoccupied grass ranges must and will be restocked, and as that process is in course of completion cattle prices are bound to improve. The cattle business is now in a situation diametrically opposed to that of the fall of 1919. Then, cattle were high, feed was high and money was plentiful. The temptation to plunge could not be resisted by many; then men bought cattle and fed them to find that by the time they were ready for market the money situation had tightened, factories had shut down, the bottom had dropped out of the beef market and the operation had cost them a tremendous lot of money.

"Now we have passed through the financial crisis. Money is again getting easy and obtainable for use by people whose credit is good. Cattle prices have gone down below prewar levels and feeds are cheaper than at almost any time within my memory. Therefore, one may start in the cattle business now with the absolute assurance that things can not get worse and that any change of condition must be for the better and will make for the man in the business a profit."

THE WASHINGTON FARMER

VOL. XLVI. NO. 5.

Trade Mark registered U. S. Patent Office.
Published Weekly, on Thursday.
By Cowles Publishing Co.
REVIEW BLDG., SPOKANE, WASH.

Subscription price: Five years, $1.00; three years, 50c; one year, 25c. Canadian, one year, 75c. Foreign, one year, $1.25.

OUR GUARANTEE TO SUBSCRIBERS.

Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unused portion of the amount paid for the subscription will be refunded. You must be satisfied.

Entered as second-class matter, January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879.

GUARANTEE OF ADVERTISEMENTS

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible bankrupts. Complaints must be sent to us within 30 days from the date of the transaction and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of disease in stock sold through these columns.

A Frank Admission

Following the recent raise in the price of retail milk in Spokane from 10 to 13 cents, which resulted from a compromise between the Inland Empire Dairy Producers' association and the leading distributors of Spokane, the head of one of the distributing companies was quoted as making the following striking utterance:

"The price of milk to the consumer does not affect the distributor one way or the other, but does vitally affect the producer. If the consumer pays less, the farmer receives less and is the one who suffers."

In a general way this is a fact well recognized by the milk producers of the country. It is seldom, however, that a representative of the distributing companies makes openly such admission of the one-sidedness of the milk marketing business. It is a frank declaration that the producers under existing conditions, or under conditions as they have existed during the past, have no voice whatever in the making of the price on their product. They have taken what the distributors offered and in turn the consumers have paid what the distributors asked.

It is only since the milk producers have begun to organize that they have had the slightest influence in the fixing of the prices paid them.

It is interesting to note one inaccuracy, however, in the statement of the distributor quoted. In this particular instance the Inland Empire Dairy Producers' association has succeeded in securing a price of 30 cents per hundred pounds, or thereabout, higher than the price that was being paid at the time the association equipped and started its by-products plant in Spokane. At that time the price of milk to the consumer was the same as it is today.

The time is not far distant when there will be a more equitable relation between the price of milk to the consumer and that paid to the producer. Producers' associations based on sound principles and wisely managed will be the agency through which this betterment will come about.

When the Blood Thickens

The tendency of civilized man is toward taking less exercise in winter than in summer. With the improvident savage it is just the other way. He must go farther in winter for his food, look for it more indefatigably and exert himself more to obtain fuel; and of both he consumes far greater quantities in the winter season. So, he keeps himself in hardihood at the time when the blood's thickness would otherwise render circulation sluggish, and at the time when it is most essential to physical welfare that circulation be vigorous.

Civilized man stores his fuel and food. His activities are far-sighted and periodical, economy of effort distributing them seasonally. By far the greater portion of the energies devoted to food production and to the creation of raw materials for fabric is expended in summer. Thus, when he is consuming, in winter, quantities of food to keep up the body's warmth, he is using the body's energies least of all. It is especially true among agricultural people, with whom the strenuousness of sowing and harvesting and food-preserving tends to be followed by a prolonged season when activity is to some extent optional.

Thus civilized man lays the foundations of so many of his blood troubles, stomach troubles and, in inevitable consequence, troubles with his disposition.

One means of offsetting this unbalance of activity is the performing of the utmost possible share of home improvement in the winter months, so far as weather will not interfere with them. So, we show ourselves yet more foresighted, more regardful of economized effort—an evidence of a still higher civilization. There is a room upstairs to be papered, perhaps, a cabinet to build, stationary tubs to install, fuel to split for the months far ahead, even if the temperature does interfere with such work as plastering or piping. There are supplies that can be estimated in quantity and purchased now at less cost of money and delay than in the season when all clamor for them. There are little handy devices and little adorning touches that will never occur to us during the outdoor season, and which, did they occur to us, there would not be time to effect.

Winter is not, in fact, the dull season in the farm home, but the time for renewing, brightening, beautifying it and improving its value. The little changes will have a marked, refreshing effect upon our inward life at this season.

"Get-Together" Meetings on Farm

Large business firms are obtaining excellent results from their "get-together" meetings, where employers and employees talk business matters over, and become better acquainted. Sometimes these meetings are in the form of banquets, after which speeches are made concerning plans and methods followed by other firms, and new ideas that would possibly help in the efficiency of the plant. Many of the larger manufacturing companies have gone to considerable trouble and expense to erect community halls for a meeting place, and the employees are encouraged to gather from time to time and discuss plans which they want to bring before their employers.

We once knew a farmer, who, by the way, has proved eminently successful in the live stock world, who followed much the same plan with the group of young men whom he employed on his farm. Frequently he would take long walks about the premises after supper. Before starting he would invite some of the "boys" to accompany him, and always his invitation met with a ready response from two or three of them, even though a hard day's work had gone before. The trip was always a valuable one, since the crops, pastures and live stock which they passed were freely discussed and criticized by both the owner and the younger men.

"Now, what would you do with a stand of clover like that?" the proprietor might question, and such good spirit existed between himself and the boys that they did not hesitate to give their opinion freely. Although the suggestions were not always applied the discussion was invaluable to all the parties, and resulted in splendid cooperation about the farm. One of these same "boys" now in business for himself was heard to remark recently that he believed these walks were of more value to him than were some of his classes in college.

Teaches Farm Repairing

One of the things that every young man who attends the state college can learn is to repair farm machinery and other farm equipment. A regular farm repair course is offered. Valuable help along this line can also be received during the winter short courses.

State Farm News

Lewis county's productive income for farms in 1921 totaled $4,630,302, according to an estimate compiled by A. G. Fowler, county agent. The estimate shows the rapid growth of the poultry industry in the county, receipts for which this year total $1,286,000. The receipts of the dairy industry are estimated at $1,298,600, and of cereals, $1,575,600.

Beef cattle, 400 head, $20,000; sheep, 800 head, $4800; wool, 18,200 pounds, $2002; swine, 4000 head, $64,000. Total, $90,802.

Poultry—Eggs produced, 3,500,000 dozen, $1,260,000; poultry sold, 40,000 birds, $26,000. Total, $1,286,000.

Cereals—Oats, 840,000 bushels, $52,000; wheat, 168,000 bushels, $142,800; hay, 72,000 tons, $1,080,000. Total, $1,575,600.

Root crops—Potatoes, 220,000 bushels, $176,000; other root crops and vegetables, $30,000. Total, $206,000.

Fruits—Strawberries, 10,000 crates, $17,500; other berries, 1,200,000 pounds, $60,000; apples, 115,000 bushels, $69,000; prunes, plums and cherries, $12,800. Total, $159,300.

Honey, $14,000.

* * *

Long Beach, the little Pacific county town which won the silver cup for the best community fair in the county during 1921, is going out after the 1922 cup.

* * *

Pomona grange met at Willapa recently and elected the following Pacific county residents to office: Noel Campbell, master; E. W. Lilly, overseer; May Lilly, lecturer; Wendell Holm, steward; W. W. Moffit, assistant steward; Walter Jennings, chaplain; W. C. Habersetzer, treasurer; Mrs. M. F. Glenn, secretary; J. R. Beck, county agent, gatekeeper; Mrs. Gus Bues, Ceres; Mrs. W. W. Campbell, Flora; Mrs. J. W. Timmen, Pomona; Mrs. Charles Gehrman, lady assistant steward; A. Lundquist, E. S. Heckard and Oscar Oman, executive committee.

* * *

A special week of training in live stock and other educational lines next June at the Washington State college is planned for the boys and girls of Washington by Dr. S. B. Nelson, extension work director.

* * *

An agricultural council for Grays Harbor county, representing nine farm districts and the commercial organizations of Aberdeen, Hoquiam, Montesano, Elma and Westport, was organized January 12. W. C. Mumaw of Aberdeen was elected president of the council and W. J. Wharton of Satsop vice president. One committee was appointed to outline a county agricultural program for presentation at the next meeting of the council and another was named to confer with commercial organizations of the harbor on formation of a county development council of larger crops.

* * *

A petition for a permit to graze 67 head of buffalo on the Rainier national forest was asked of G. F. Allen, forest supervisor, by Gibson brothers recently. This is the first application of its kind and will establish a precedent. Since there is nothing in the regulations covering fees for buffalo, Mr. Allen has decided to refer the application to Chief Forester W. B. Greeley.

* * *

First steps in the formation of a $30,000 Holstein stock club were taken at a massmeeting in Montesano January 12, when business men of Montesano met with dairymen from all parts of the county.

The plan under consideration is one that was originated in Pettis county, Missouri. Shares of small denominations are to be sold to make it possible for the company to bear two-thirds of the cost of the purchase of a pure-bred Holstein cow.

* * *

Federal farm loans in Benton county during the last year have totaled $103,000, according to W. S. Jenkins of the Benton County Abstract and Title company. Mr. Jenkins also states that approximately $60,000 more in loans have been approved and are on the way. The majority of these loans have been in the west end of the county.

* * *

Mrs. Charles Davis of Parker found turkey raising profitable this season, selling 24 birds for $104.45. All the birds were raised from a single hen. Out of 38 eggs laid by the original hen, 33 turkeys were matured during the season, 24 being sold, eight held over for breeding stock and one furnishing a Thanksgiving dinner. The birds averaged more than 11 pounds dressed.

* * *

John C. Lawrence has assumed the management of the Winlock branch of the Washington Cooperative Egg and Poultry association, succeeding H. R. Duffy, resigned. During the last year Mr. Lawrence has been manager of the feed department of the Puyallup and Sumner cannery.

* * *

An enlarged plant, capable of taking care of the strawberries and other soft fruits and tomatoes grown near Oroville next summer is the plan of the Oroville Canning company. Officers elected at a recent meeting are F. V. Covert, president; J. L. Masters, vice president; C. M. Zediker, secretary.

* * *

Hollanders will eat 250,000 pounds of Clarke county prunes, which were sold early in January in that country by the Washington Prune Growers' association of Vancouver, according to M. J. Newhouse, local manager. This is the first foreign shipment of prunes made from Vancouver since before the war. More than 50 per cent of the Clarke county crop for 1921 has now been sold.

* * *

Land will be cleared and buildings erected next spring on the 5000-acre tract recently purchased by Miller Brothers of Oklahoma on Axford prairie. One of the Miller brothers was here recently arranging for improvement of the land so that cattle might be put on it next year. The cattle will be brought from Oklahoma and Texas, where the Millers own ranches.

* * *

Newly elected officers of Lewis county Pomona grange are as follows: Frank O. Miller, master; T. K. Belcher, overseer; C. W. Frase, lecturer; Mrs. C. Null, chaplain; O. C. Wisner, steward; L. Griel, assistant steward; Mrs. Groshong, secretary; W. Foster, gatekeeper. The next Pomona meeting will be held at Silver Creek February 4.

FARM BUSINESS AND MARKETS OUTLOOK

Since the first of the year cattle receipts at the seven leading markets have fallen 17 per cent below the seven-year average for the season; however, the market has shown only brief periods of strength.

Available supply of stockers and feeders has been absorbed with little change in price levels from week to week.

With two-thirds of the winter hog packing season from November 1 to March 1 behind it, the hog market has averaged about $1 higher than was generally expected.

Lamb prices are at the highest level since November, 1920.

Receipts of horses, as well as mules, at the leading markets have shown a decided increase since the first of the year.

Prices upon medium and low grades of wool have advanced 35 to 50 per cent and upon fine wool, 20 to 25 per cent since September.

During the last 30 days export demand for wheat has been confined almost entirely to Canadian and Argentine grain.

Corn prices are holding within narrow limits.

The oats market has been dull, but prices have gained slightly upon corn.

While declines in the egg market are in prospect wide margins will prevail between country buying prices and prices in central markets.

PRICES STILL OUT OF JOINT

Farmers are still carrying their share of the load with an extremely short end of the stick. Wholesale prices upon farm products during December were only 13 per cent higher than in 1913, according to the index numbers compiled by the bureau of labor statistics. This equals the former low point of recent months reached last June. The general average of all commodities is 49 per cent higher than the pre-war level. The following table shows how much more severe the process of deflation has been in farm products than in most other commodities.

	Per cent by which December, 1921, prices exceed 1913 level.	Percentage lost of maximum advance over 1913 level
Farm products	13	91
Food, etc.	39	79
Cloths and clothing	85	67
Fuel and lighting	87	53
Metals and metal products	19	80
Building materials	103	57
Chemicals and drugs	61	50
Housefurnishing goods	118	56
Miscellaneous	48	67
All commodities	49	72

When prices upon farm products were at the peak in the spring of 1920, they were 146 per cent higher than in 1913, so that 91 per cent of the maximum advance during the war inflation has been lost. On the other hand, fuel and lighting were 184 per cent higher than in 1913, when they were at the maximum. Only 53 per cent of this inflation has been lost. Chemicals and drugs have lost only 50 per cent of their inflation, house furnishings 56 per cent and building materials 57 per cent.

Based on the record above, farm products when used to purchase cloths and clothing or fuel and lighting at wholesale would buy in December only 61 per cent as much as in 1913; 95 per cent as much of metals and metal products; 59 per cent as much lumber and building materials; 74 per cent as much chemicals and drugs, and 55 per cent as much housefurnishing goods. Since retail prices have declined less than wholesale, and since the farmer sells at wholesale and buys at retail, his actual disadvantage is worse than these figures show. Eventually these prices must be readjusted.

BETTER DAYS COMING.

There is a silver lining in the cloud, however. Although only a part of the decline in wholesale prices of farm products has been passed on to the ultimate consumer, enough of it has reached him to stimulate consumption in spite of a large amount of unemployment. This is particularly true of pork, eggs, butter and flour. In a lesser degree, it is true of other products of the farm.

Big stocks of cotton and woolen goods with which commercial channels were choked 18 months ago, have passed into consumption. Present and future needs must be supplied by current production so that mills will be kept busy giving employment to their workers and making steady drafts upon stocks of raw materials.

Low prices of food and raw material eventually attract the attention of consumers and manufacturers all over the world. Huge purchases of foodstuffs in the United States in the last year by European countries show how bargains bring the crowds. Exports of wheat and flour for the 1921 calendar year amounted to 356,000,000 bushels, a new record. Lard exports also were the largest ever known. Corn exports increased more than 500 per cent over 1920 and were the largest in many years. Exports of hog meats, cotton, rice and barley were above the average. Notwithstanding heavy buying by Europe of agricultural products, her purchases of manufactured goods were decreasing.

It appears more and more evident that reports of liberal bread crops in Europe in 1921, which helped to depress our wheat and rye prices last fall, were exaggerated and that it will be necessary to keep the food ships moving in that direction from the surplus countries right along. All of which means that the farmer's market is broadening and that presently the world will begin to pay for his products what it costs to produce them.

FEWER CATTLE NEEDED

Either a lighter supply from week to week or restoration of normal beef consumption as a result of lower retail margins and increased employment is the prime need of the cattle market. Since the first of the year receipts at the seven leading markets have fallen 17 per cent below the seven-year average for the season, but with the appetite for beef curtailed possibly 20 per cent, the market has shown only brief periods of strength.

Although beef may become more popular with the public by spring, there is little hope of a pronounced change in that way. But a lighter supply of cattle is "normalcy" for the spring months and relief from the present state of near-congestion depends upon this seasonal occurrence.

No fears are anticipated of an increase in supply, barring an occasioal day or two, and beef consumption should hold its own so that prices are not expected to trend downward from this level.

Shortfed steers are in the majority. Heavy steers have gone to a premium owing to extreme scarcity. Prime yearlings are not available. Good yearlings are not commanding special attention as they can be counterfeited with light shortfed steers.

FLESHY FEEDERS LOOK LIKE BARGAINS.

Notwithstanding the uneven, faltering behavior of the fat cattle market, the available supply of stockers and feeders has been absorbed with little change in price levels from week to week. The relative cheapness of shortfeds is drawing attention in that direction so that some of them are returning to the country for further feeding, but the majority of outbound shipments are light steers showing good breeding.

In the grazing sections pasture men are nursing their wounds of the last two years. No Kansas pasture contracts have been made so far as known, but the supply of suitable steers is believed to be light, so that no bargains in thin cattle are in sight. Much depends upon the weather in the southwest, where the drought is not yet broken. Efforts to increase dairy production instead of restoring beef herds are conspicuous in many sections west of the Missouri, as butter making has been profitable, but the momentum in that direction may spend itself soon, as the butter market already has a big load.

HOG MARKET A PROSPEROUS AFFAIR.

With two-thirds of the winter hog packing season, from November 1 to March 1, behind it, the hog market has averaged about $1 higher than was generally expected. Shipping demand, which sprang up much earlier than usual, has been a stout prop right along, big packers have had their share of fresh pork orders to fill, export clearances have held up and are running ahead of those of last year and this far no accumulation of hog product and lard of consequence has taken place.

Cold storage holdings of lard for the entire country increased only 4,700,000 pounds in December, against an increase of nearly 23,000,000 pounds in that month a year ago. The increase in frozen and cured hog meats, including those in process of cure, was only half as large as in December, 1920.

LAMB SPURT NOT EXHAUSTED.

Although the lamb market has had a top-heavy appearance for some time, prices have continued to advance during most of January, with only slight interruptions. Thus far receipts for the month of January at seven markets have fallen 12 per cent below the average for the corresponding period. Consumers have not yet balked at paying the fancy price which dressed lamb is demanding, as compared with other meats. Most of the Coloradoes went into feedlots late in the season and were of light weight when purchased, so that the movement from Colorado will be light for several weeks yet. Prices are at the highest level since November, 1920.

BETTER HORSE MARKET IN PROSPECT.

Receipts of horses as well as of mules at the leading markets have shown a decided increase since the first of the year. The eastern farm chunk demand is gaining breadth and most of the supply has been cleared without difficulty, although the Chicago market has been weak for 10 days. Most of the 1300 to 1600 pound chunks are moving at a range of $125 to $200. City users of heavy drafters are taking few, so that this division of the trade shows less activity.

Mule markets, which have been sluggish for months, have returned to life. A large number of mules are moving toward the south via the St. Louis and Kansas City gateways, although prices are not comparable with those of two years ago.

With the farm chunk season and the period when southern trade usually is brisk both at hand, both horse and mule markets should improve and an advance of 10 per cent in values would not be surprising.

WOOL SCARCITY LIFTS PRICES.

Wool stocks throughout the country, as shown by the Commercial Bulletin of Boston, were 113,000,000 pounds, compared wih 276,000,000 pounds a year ago. Prices reached low point early last fall, when business pessimism was rife, wool stocks were apparently large and there was prospect of an early enactment of the permanent tariff with a low duty upon wool. Prices upon medium and low grades have advanced 35 to 50 per cent and upon fine wools 20 to 25 per cent since September. Most of the foreign wools are obliged to pay a duty of 30 cents per pound in the grease and passage of the permanent tariff is still some distance away. Further advances in values occurred last week, both in this country and abroad. Americans have been buying at London and in South America. Some western growers have contracted wool at 21 to 23 cents on the sheep's back, but most of them are holding for 25 to 30 cents, with a prospect that prices may rise to 40 cents for some of the best clips.

SMALL WHEAT RESERVES REPORTED

Since no official report upon farm reserves on January 1 is to be issued, a private report showing only 140,000,000 bushels on January 15 has attracted great attention. Subtracting spring wheat seed and farm consumption during the rest of the year, the farm surplus, if the report is correct, is not more than 110,000,000 bushels. Last year the government estimate showed 208,000,000 bushels on farms on March 1 or six weeks later. Domestic consumption of wheat averages about 40,000,000 bushels per month, which would mean 220,000,000 bushels before July 1. On this basis, if the farm reserve report is correct, an extreme scarcity of wheat will develop before harvest unless heavy inports are made from Canada.

Although made by a reliable statistician, this unofficial report shows about 70,000,000 bushels less wheat than would be expected based on official estimates upon the size of the crop and apparent flour production and consumption thus far in the crop year, but with wheat and flour still being exported, a rather tight domestic situation is developing, as the usual carryover is aronud 80,000,000 bushels. The government's March 1 estimate should determine how close the adjustment of supply to demand is going to be.

SOUTHERN HEMISPHERE WHEAT TO EUROPE.

During the last 30 days export demand for wheat has been confined almost entirely to Canadian and Argentine grain. Large sales to Russia and Greece have been made in Canadian markets during the last week. Argentine pressure, especially for February-March shipment, is increasing abroad. Clearances from Argentina mounted to 2,500,000 bushels last week, while Australia shipped 6,000,000 bushels. The department of agriculture has estimated that Germany will be obliged to import 2,000,000 tons of food before the next harvest, while Italy requires probably 1,000,000 tons and France 500,000 tons of wheat. Most of these requirements will probably be filled in Canada and the Argentine.

Prices advanced during the last week, reaching the highest point in nearly a month. Light receipts and firm cash markets as a result of buying by mills, together with bullish reports on farm reserves and the condition of the winter wheat crop, were factors. An excessive visible supply curbs advances and may continue to do so for a while, although a big decrease was made in it last week.

Winter wheat in the southwest undoubtedly is in bad shape. A crop scare of first magnitude is probable with the opening of spring unless drenching rains are received where needed.

CORN PRICES TRAVEL NARROW RANGE.

Corn prices are holding within narrow limits. Receipts at primary markets have been heavy, last week's run being the largest in more than 10 years, but the same broad demand from industries, domestic consumers and exporters is in evidence that has been noted in the last few weeks. Growers are developing more confidence in the market and it is said that farmers in Illinois have been canceling orders to sell at 40 cents net at loading stations.

CASH GRAIN MARKETS.

The range of cash grain prices for the week ended January 25 was as follows: Chicago—Corn—No. 2 mixed, 49@50c; No. 3, 48@49c; No. 4, 46 1-2@47 3-4c; No. 2 yellow, 49 1-4@50c; No. 3, 48@49c; No. 4, 46 1-4@47 3-4c; No. 2 white, 49 1-4@50c; No. 3, 48 1-4@49c; No. 4, 46 1-2 @48c. Oats—No. 2 white, 37@38 1-2c; No. 3, 34@36c; No. 4, 33@34 3-4. Rye—82@84c. Barley—54@65c.

CLOVER SEED STATISTICS BULLISH.

Based on the size and quality of the crop in this country and in Europe, clover seed statistics are decidedly bullish. The question is whether they have been fully discounted at current prices, which are high compared with other farm products. Farmers are believed to have sold most of their surplus, so that the bulk of the supply is in distributive channels. The supply of alfalfa seed is below normal in Kansas and adjacent sections and moderately higher prices are anticipated. Timothy seed prices are still creeping slowly upward.

TOLEDO—Per bushel: Prime red clover, $13.85; prime alsike, $11.70; prime timothy, $3.22 1-2.

CHICAGO—Per 100 pounds: Clover, $12.22; timothy, $5@7.

FEED PRICE DECLINE STAYS.

Although the feed market has been quiet, prices have not recovered from recent declines. The supply of all feeds appears to be ample and demand is indifferent. Drastic price changes are not generally expected.

CHICAGO—Bran, $23.75; standard middlings, $20; flour middlings, $25.50; gluten feed, $32.65; hominy feed, $21;

(Continued on page twenty-four.)

Little Journeys to Market

TOLEDO PRODUCE EXCHANGE.

Red clover seed and timothy seed prices in all sections of the country take their cue mostly from what happens on the Toledo Produce exchange. Toledo is an important seed distributing center as it is located conveniently with reference to the red clover seed producing area which extends from Ohio and Michigan to Iowa and Missouri and for the timothy growing area, which, with the exception of the state of Missouri, lies north of the Ohio river and east of the Missouri.

It is the only market upon which trading in these seeds for future delivery is carried on, so that all hedging operations by producers, dealers or consumers is concentrated there and with such transactions there goes on the usual complement of speculative trading.

At the present time February clover is quoted at around $14 a bushel, March clover around $13.90 and April clover at $13, which indicates that the trade expects clover seed prices to decline before the end of April. Since most farmers must buy their seed before the middle of April, it is easy to see how the market might break before that month is out.

Panama Canal Builder Is Here

General Goethals Will Make Personal Survey of Columbia Basin Project

Major General George W. Goethals, the man who, as chief engineer, built the Panama canal from 1907 to 1914, has been engaged by the state of Washington to render an engineering report upon its Columbia basin irrigation project. General Goethals telegraphed Director D. A. Scott of the state department of conservation and reclamation that he would arrive in Spokane on February 2, bringing assistants with him, and was prepared to go immediately in person over the great project, leaving his assistants in the office of the state commission to check up the data already compiled by the state's engineers.

Director Scott believes that, as the Columbia basin plan is the greatest project in the west, it should be passed upon by the greatest engineer in America. That view is shared by United States Senators Jones and Poindexter, who conferred with Director Scott before General Goethals was engaged.

This action of Director Scott will meet with general approval. The state has already appropriated $150,000, and through an able commission and able engineers has made extensive preliminary surveys and investigations. It is now desired that the federal government shall take up the vast undertaking, and a favorable report by General Goethals would go far toward enlisting the approval of congress and the nation.

The suggestion that General Goethals be employed came first from Major General Leonard Wood. On his way to the Philippines General Wood telegraphed to Colonel W. S. Abercrombie, an old army associate, asking him to join him at Spokane and go across the state to Seattle. Colonel Abercrombie told General Wood about the state's great project and enlisted his interest. "It is a vast undertaking," said General Wood, "and should be passed upon by an engineer of international standing. If a man like General Goethals should report that the project was feasible his recommendations would go far with congress and the nation." General Wood's recommendation was submitted to the two United States senators and Director Scott and was adopted.

Must Learn Feasibility.

It is of the highest importance that the state should know now, definitely, whether it has a feasible project. According to the last official report of State Hydraulic Engineer Marvin Chase, there is a total area of irrigable lands in this state for which water can be obtained of 2,526,600 acres. Of that area 1,844,000 acres are embraced in the Columbia basin project. More than two-thirds of the state's total irrigable area are, therefore, in this single project, and it is highely desirable that the state and the people of Washington should know whether these lands can be irrigated.

Must Safeguard the Water.

It is vital to this great project that the water that will be needed for it shall be preserved and not be allowed to be seized by water power interests. These vast interests are now astir all over the west where there is undeveloped water power. They were held back for about 15 years by the refusal of congress to pass a water power bill that was to their liking. President Roosevelt, Gifford Pinchot and other friends of conservation opposed the water power bill, and it was defeated in session after session of congress. Recently, however, a bill that was fairly acceptable to the friends of conservation was passed by congress. It gives priority of the use of water to irrigation over water power.

Power Interests Fight It.

It is known that certain water power interests are fighting the Columbia basin project, knowing that if they can kill it they will then come in for the exclusive and undivided use of the water power of the Columbia river and its tributaries. They have two purposes in mind in their attempt to seize the water power sites of this vast region: First, to prevent their development by competing companies and thus continue their monopoly of water power in the Pacific northwest; and second, at their leisure, perhaps in the distant future, to develop these projects themselves.

If General Goethals shall say that the Columbia basin project is feasible, a determined stand should be made by the state and its people for the preservation of the water supply for the lands in the project. It would be a monstrous pity and tragedy to let nearly 2,000,000 acres of rich soil lie forever in the desert for want of water. We need to reclaim these valuable acres for the benefit of the sons and daughters of the farmers of the Pacific northwest, who will want opportunities to make homes for themselves after they leave their parents' sheltering care.

Who Wins the Pig?

The Washington Farmer will announce in its next week's issue the names of the winners in its recent prize letter contest, in which several scores of people throughout the state discussed, from almost as many angles as there were writers, the subject, "Hogs as a Farm Byproduct in Washington."

The first prize in the contest is a purebred gilt of a breed selected by the winner, bred to bring a litter of purebred pigs this spring. The second prize is $15 and the third $10. The three winning letters will be published.

Spokane Fruitgrowers' Association

J. A. McMillan of Greenacres has been appointed receiver for the Spokane Fruitgrowers' association and the complaint is made that the concern is insolvent and that the company must have a receiver to protect creditors.

The decision to ask for a receivership was reached at a meeting of the board of trustees.

It was later announced that 13 warehouses, title to which rests with the Spokane Fruitgrowers' company, will be sold if possible to the growers in the districts in which the warehouses are situated. To acquire these warehouses growers will have to form local organizations.

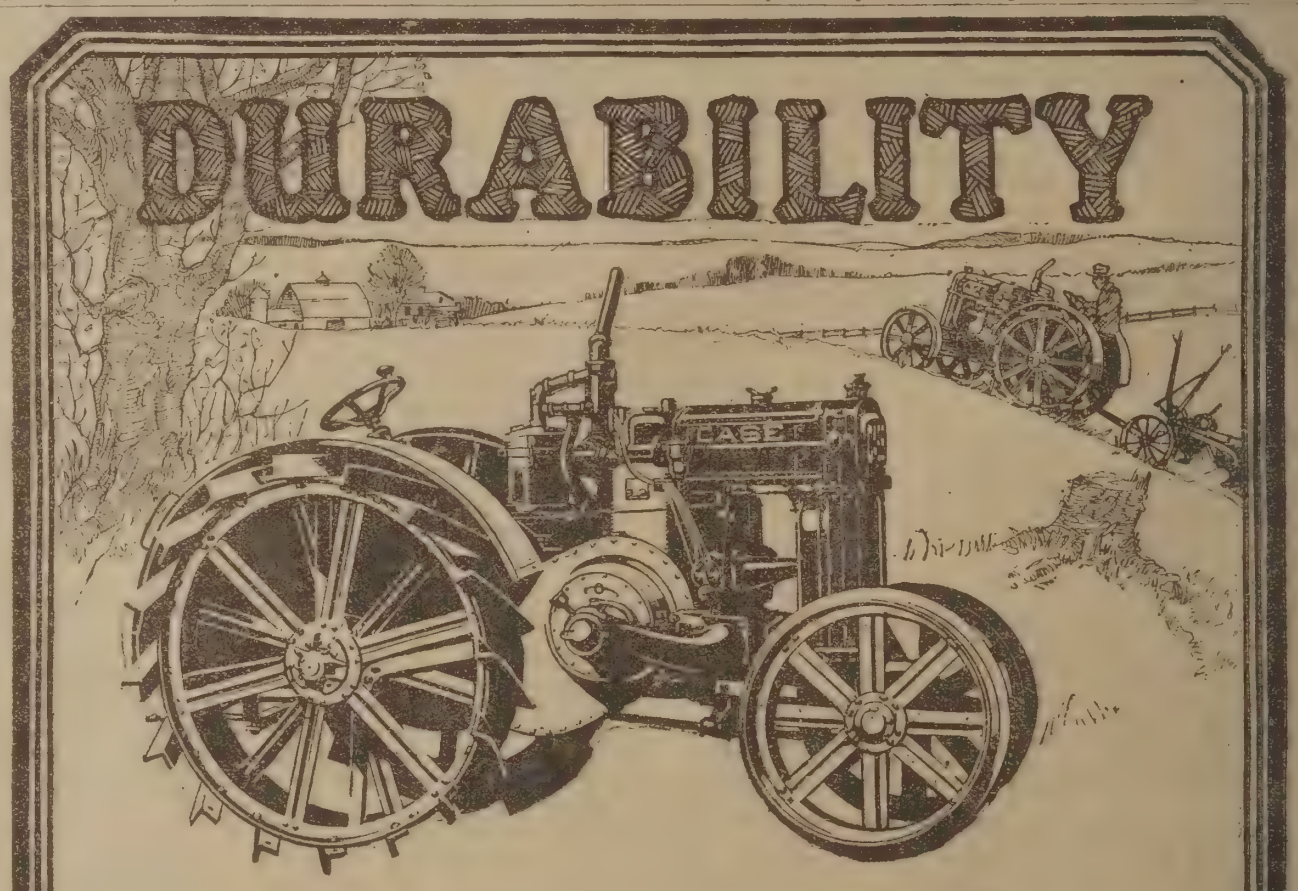
The assets are unofficially estimated at $250,000. Exclusive of the warehouses, their equipment is valued at $25,000 and supplies on hand, consisting of boxes, paper, labels, nails and such are also put at $25,000. Other assets represent railroad spurs, a motor truck, office furniture and growers' overadvances payable to the company.

P. R. Parks, general manager, stated yesterday that the company's paid-up stock is $170,000, held by 1600 growers. Most of the creditors are growers and the company's indebtedness to them is in the form of remittances due growers on fruit sold for them during 1921 and, in a few instances, in 1920.

King County Farm Bureau

Summarizing the year's activities in King county, County Agent A. B. Nystrom speaks of 501 farm visits made, 160 farmers' meetings held, with a total attendance of 8550 persons; 1196 person letters written and 14,964 circular letters distributed.

During the year four silo-building demonstrations were held; surveys made for 383 acres of grain, organized one drainage district and organized two cow-testing associations. Seed corn improvement was started on some farms.



A total of 2101 persons called at the office to get information. How to combat the Canadian thistle was demonstrated on four farms. A live stock survey showed 350 scrub bulls in the county.

On hundred and twelve poultry flocks, representing 54,494 birds, were culled under the direction of the county agent's office. Seventeen per cent, or 6381 birds, were found to be culls.

These are among the 30 points under which the activities of the county agent's work are scheduled.

THE GARDEN SOIL.

Do not put your garden into unprepared soil. Prepare it just right. Fertilize it. Get a good garden instead of a fair one or a poor one.

A CASE TRACTOR QUALITY

Case Kerosene Tractors have demonstrated remarkable efficiency and economy in every test in which they have been entered. The following are a few of many exceptional records, made in the world's most important tractor tests:

Lincoln Tractor Trials, Lincoln, England—10-18 Case Tractor won Gold Medal and 20 pounds in Class I.

Zarazoga, Spain—15-27 Case Tractor and Grand Detour Plow won First Prize in Economy.

Benha, Egypt—15-27 Case Tractor and Grand Detour Plow won All First Honors.

France—In six different tests held under the auspices of French Agricultural Committees 10-18 and 15-27 Case Tractors with Grand Detour Plows won Highest Awards, Gold Medals and First Prizes.

Operating economy is important but rugged durability is even more important. Ruggedness, the ability to stand up under the severest conditions and perform the most strenuous work is an essential quality of every Case Tractor. This quality is the result of a highly developed design and superior construction and is the reason why every Case Tractor may be relied upon to give dependable and efficient service year after year.

The Motor. All Case motors are of the heavy duty, four cylinder, valve-in-head type, built to use kerosene successfully. Developing power well above their rating, they are never overtaxed on their rated loads—another reason for durability.

The Drive. The motor is mounted crosswise on a rigid frame, permitting the use of a few simple spur gears—the most efficient and durable type of drive. All gears and shafts are made of special alloy or carbon steel. The gears are all machine cut, heat treated and run in oil. Anti-friction bearings, held in permanent alignment by the rigid frame, carry all shafts and axles.

Protection. All working parts are enclosed in dust and dirt-proof housings. Gears, bearings and motor parts are all completely enclosed and thoroughly lubricated. A Case patented air washer prolongs the life of the motor and adds to its efficiency.

These dependable, durable Case Tractors are made in three sizes—10-18, 15-27 and 22-40, so as to meet the requirements of any farm.

We also manufacture Grand Detour mouldboard plows, disk plows and tandem disk harrows in various sizes for use with Case Tractors.

Illustrated catalogues explaining the superior qualities of our Tractors, Plows and Harrows mailed upon request.

J. I. CASE THRESHING MACHINE COMPANY
DEPT. P-56 RACINE WIS.

NOTE — We want the public to know that our plows and harrows are NOT the Case plows and harrows made by the J. I. Case Plow Works Co.

GRAND DETOUR

Boys' and Girls' Club Work

E. N. Hopkins of Des Moines, Iowa, a member of the recently organized national committee on boys' and girls' club work, and editor of the Farm Boys' and Girls' Leader, whites to THE FARMER that the national committee proposes to get behind the boys' and girls' congress, which will be a feature of the Oregon 1925 exposition, adding: "We have asked Mr. O. M. Plummer of Portland to send us a statement covering this matter as soon as possible for publication. You will hear from Mr. Noble, regarding the committee's plans for your territory, and we will work together in putting over the congress and club program in general."

Mr. Hopkins adds that E. T. Meredith, the chairman of the national committee, is giving this matter much of his personal time and attention.

G. L. Noble, secretary of the national committee on boys' and girls' club work, sends a special message to the readers of THE FARMER on this most important work among the boys and girls on the farms. Mr. Noble quotes Theodore Roosevelt's words:

"If you are going to do anything permanent for the average man, you must begin before he is a man. The chance of success lies in working with the boys and not with the man."

Mr. Noble adds that this truth may have been in the minds of our agricultural leaders when they officially started agricultural extension work among farm boys and girls, known as boys' and girls' club work, carried on by the agricultural colleges, the U. S. department of agriculture, cooperating. This work has received enthusiastic support of the people generally and has had great growth in the past three years. Membership of 1914 was 23,000 and in 1920, it was 331,000.

This work has also had its appeal among the large business men of the country. In order to increase the scope of the work, enlarge the membership and aid in every way possible in cooperation with the agricultural colleges and the United States department of agriculture, a national committee on boys' and girls' club work was formally launched at the 1921 international live stock exposition. E. T. Meredith, former secretary of agriculture, Des Moines, Iowa, heads the committee as chairman; B. H. Heide, manager of the international live stock exposition, Chicago, Ill., is treasurer, and G. L. Noble, Chicago, Ill., is secretary. The other members, representing various business interests the country over, are as follows:

Carl J. Baer, manager production department, St. Louis Chamber of Commerce.
Newton T. Baker, ex-secretary of war.
E. J. Bodman, chairman, Arkansas State Bankers' association.
Nathaniel I. Bowditch.
Arthur Capper, U. S. senator from Kansas.
W. J. Carmichael, secretary, National Swine Growers' association.
J. W. Coverdale, secretary, American Farm Bureau federation.
F. L. Eaton, president, Interstate Fair association.
Joseph Hirsch, chairman agricultural commission, American Bankers' association.
E. N. Hopkins, "Successful Farming."
Harold F. McCormick, president, International Harvester Co.
J. M. Parer, governor of Louisana.
O. M. Plummer, secretary, International Live Stock association.
John Simpson, secretary, Eastern States exposition.
R. M. Striplin, secretary, Southeastern States fair.
Thomas E. Wilson, director, U. S. chamber of commerce, and president Institute of American Meat Packers.

The committee hopes to coordinate the efforts of all business and organization agencies in furthering club work. It would call to the attention and solicit the cooperation of every farmer, breeder, banker and business man because of the value of this work to their own business, the developing of the community and the welfare of every American interest.

ALL ABOUT Silos

I invented the H-L-F silo, which everybody seems to like. I have written a book, entitled "All About Silos," which I will be glad to send free and without obligation to anybody who is considering purchase of a silo. Lots of good facts in it. Write your name and address below and mail.

What Grange Offers

To Farmer, His Home and Family

Putting forth plea that every farmer should belong to the grange, the national headquarters declares:

Every man is a factor of society, and as such he is accountable for the manner in which he performs the duties which devolve upon him.

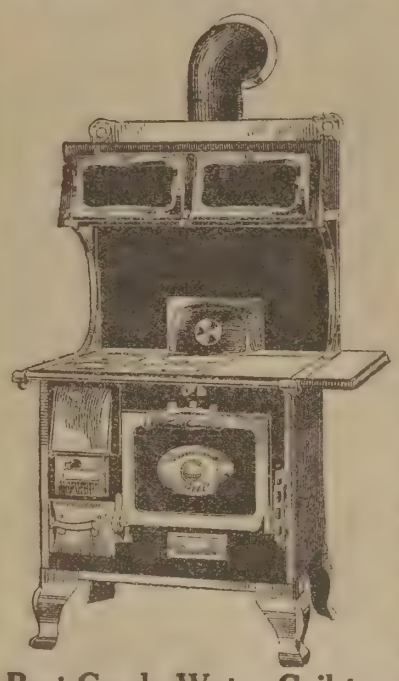
The first is to his home and family. The second to his government that permits him to enjoy the blessings and happiness of his home and family. The third is to better the conditions and advance the interests of his chosen occupation.

The farmer was created a social being and needs the wholesome influence of organization to keep him so. His business is comparatively one of isolation, varying in degree according to his environment. The farmer who lives within the boundaries of 160 acres becomes very narrow and is of little use to his community. His family is correspondingly dwarfed as they are shut out of society, and are improved as their opportunity for association increases. The individual excluded from society will, in time, lose his mental powers and become oblivious to his own needs as well as to the needs of others. Here again he needs a farm organization where he, with his family, can meet with freedom and ease, and while cultivating sociability, can secure mental culture and pleasing manners.

The grange may be called the liberator of the American farmer's wife, as it was the first organization that gave to woman the same privileges and rights as are enjoyed by man. In doing this it has not only turned on the radiant light of hope for her, but it has strengthened the union of both, has created deeper love for home and given inspiration for better thoughts, nobler deeds, and higher aims for the future. Men need more of the refining influence of women. There is nothing that so refines a man as a good woman, and no audience, association, or organization with woman eliminated can be so modest, so refined, or so complete as with woman in it.

THE SHEEP'S AGE.

If you look in the mouth of a sheep and find two broad teeth in the center of the jaw, with small ones at the side, the sheep is probably a yearling. If there are four broad teeth it is probably a 2-year-old, and if there are six the age is probably three.



You Can Now Buy

The OHIO Steel Range

at the new Low Price

$69.00

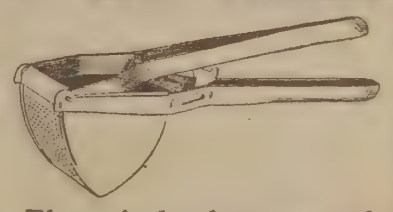
(We Pay the Freight)

THE four-hole Ohio Range (exactly as pictured) with 17-inch oven, now quoted at the lowest price in years!

Frederick & Nelson have sold the Ohio over a long period of years and recommend it to you unreservedly. It is a great Range value at the new price.

Many know it as the *"8-minute"* Range. The oven is at baking heat 8 minutes after you touch a match to the kindling. For baking results the Ohio is unexcelled. For fuel economy it is famous (burns wood or coal).

Best Grade Water Coil to fit this range is priced at - $3.00



The OHIO is the best Range investment we know today, at the new price—$69.00.

Please note that WE PAY THE FREIGHT on furniture, metal wares and other bulky goods, when purchase amounts to $5 or over, to any railroad station or steamboat landing in the State of Washington.

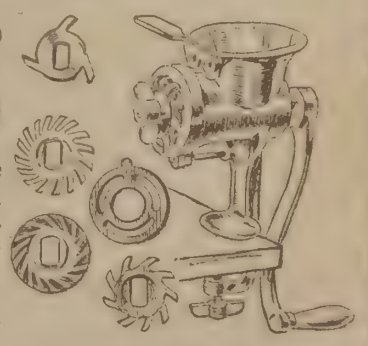
Other Splendid Values for the Woman of the House

Family Size POTATO RICER 25c

As Pictured

A very useful implement for the kitchen. Rices potatoes, extracts fruit juices and is useful in a score of other ways. Eleven inches long; strongly constructed of galvanized steel and heavy tin; nothing to get out of order. Exactly as pictured. *(Remit 6c for 1st and 2nd zone postage; 8c for 3rd zone.)*

Copper-bottom LAUNDRY BOILER $2.15



As Pictured

Choice of two sizes: 22¼ and 23½-inch. Strongly constructed Boilers, exactly as pictured, with copper bottom and fit-in cover.

(Remit 24c for 1st and 2nd zone postage; 44c for 3rd zone.)

Improved Model FOOD CHOPPER - $1.45

As Pictured

Five extra cutting knives enable this Chopper to be used to good advantage in preparing a wide variety of dishes. A very strongly constructed Chopper. A great improvement is the clamp which enables the "barrel" or main part of the Chopper to be completely opened up for cleaning.

(Remit 9c for 1st and 2nd zone postage; 14c for 3rd zone.)

FREDERICK & NELSON

SEATTLE, WASHINGTON

The Poultry Show at Spokane

The marked interest that has been manifest in the poultry industry during the last year found expression at Spokane last week in one of the best poultry shows ever held in the Pacific northwest. Between 1000 and 1500 birds were on display, an increase of several hundred over the number at last year's show. The White Wyandottes led in numbers, with the Rhode Island Reds a close second, followed by the Barred Rocks.

One of the interesting features of the show was the auction sale, at which about 40 birds were sold on the last day of the show. A Barred Rock pullet shown by Martin M. Lower of Gaston, Ore., topped the sale when it brought $40 from H. C Blair of Spokane. W. B. Reinwald of Spokane paid $35 for a White Leghorn cockerel shown by Fred A. Johnson.

The grand champion bird of the show was a Barred Rock cockerel shown by Mr. Lower of Oregon. He was awarded the gold medal offered by the American Poultry association for the best bird of the show. The state association's prize of $15 for the best female bird in the show was won by A. Hollings of Seattle on a Black Minorca pullet. The association's $10 prize for the best male bird of the show owned by a Washington breeder was won by E. G. Lucas of Spokane on a White Wyandotte cockerel.

All judging was done by J. A. Tucker of Royal Oaks, Mich. He expressed himself as greatly pleased with the quality of the birds shown and the general success of the affair, as did also Superintendent Mitchell and other officials of the show and of the state association.

A banquet of breeders was held Friday night, at which a number of poultry authorities spoke, including Professor R. V. Mitchell of the state college and H. H. Collier, poultry fancier and judge, of Tacoma.

The awards of the show were as follows:

Single Comb Rhode Island Reds—Mrs. P. Cooley, Spokane, first cock, third cockerel, fifth pullet, second young pen. Nick Sabadan, Spokane, second cock, fourth young pen. Earl Nogle, Post Falls, Idaho, third cock; first, second and fourth pullet. Fite & Hershberg, Lewiston, Idaho, fourth cock, third hen, second old pen, third young pen. Davis & Son, Spokane, fifth cock, first cockerel, third old pen, first young pen. S. W. Berry, Post Falls, Idaho, first and fourth hen. John Stanley, second hen. Carson Rote, Spokane, fifth hen. C. E. Buttles, Wenatchee, second cockerel. P. H. Redmond, Priest River, Idaho, fourth cockerel, third pullet. Will Purdy, Spokane, first old pen, third young pen. B. L. Young, Spokane, fifth cockerel.

Rose Comb Rhode Island Reds—Davis & Son, first and second cock, first and second hen, first pullet, second old pen, first young pen. Ruby H. Poultry Yards, Hillyard, third cock, fifth cockerel. F. E. Mohr, Spokane, fourth cock. E. J. Allen, Elma, third hen. A. Melrose, Spokane, first and fourth cockerel, second pullet, first old pen. Rolla Reynolds, Spokane, second cockerel.

Buff Plymouth Rocks—Harry H. Collier, South Tacoma, first cock, third cockerel, first, second and third hen, first, second and third pullet. G. R. Wilson, Wenatchee, first and second cockerel.

Rhode Island Whites—H. W. Colburn, all awards.

Partridge Plymouth Rocks—Hales Poultry and Pet Stock yards, first cock, first and third cockerel, first pullet, second third and fourth hen, first old pen. Mrs. Iva Engstrom, Spokane, second cockerel.

Light Barred Plymouth Rocks—H. C. Blair, Spokane, first cock, third hen. L. E. Biggs, second cock, fourth hen. Horace Beardsley, Eugene, Ore., first and second hen, third cockerel, third pullet. T. J. Culbert, Spokane, fifth hen, fourth pullet. Martin M. Lower, Gaston, Ore., first and second cockerel, first pullet. H. H. Essig, Spokane, fourth and fifth cockerel, second pullet. J. E. Horton & A. G. Gray, Spokane, fifth pullet.

Dark Barred Plymouth Rocks—Martin M. Lower, Gaston, Ore., first hen, first cockerel, second pullet. L. E. Biggs, second hen. T. J. Culbert, Spokane, third hen, fourth cockerel, third pullet. C. C. Baronett, Rockford, first cock, fourth hen. H. H. Essig, fifth hen, fifth cockerel, fifth pullet. J. E. Horton & A. G. Gray, first pullet. Ben F. Keeney, Eugene, Ore., third cock, third cockerel. Boone Ave. Poultry Yards, Spokane, fourth pullet. E. A. Hamilton, Route 3, Tacoma, second cock. A. Greener, Spokane, fourth cock. S. A. Nixon, second cockerel.

Barred Plymouth Rocks—H. H. Essig, first old pen and second young pen. J. E. Horton and A. G. Gray, first young pen. Martin M. Lower, third young pen.

White Plymouth Rocks—C. Noonan, Spokane, first and fourth cock. W. H. Martin, Opportunity, first cockerel. W. J. Scofield, Missoula, Mont., first pullet. J. Smith, Spokane, second hen. James Wright, Richmond Highlands, first and third hen. A. Hoyle, Wenatchee, third and fifth cock.

White Wyandottes—E. G. Lucas, Spokane, first and second cock, first and second hen, first, third and fourth cockerel, second and fourth pullet, first old pen, second young pen. Frank Thompson, Spokane, fourth cock, fifth hen, third and fifth pullet, third and fourth old pen, third and fifth young pen. V. L. Garner, Wenatchee, third cock, fourth hen. Hugh F. Jones, Spokane, third hen, first pullet, second cockerel, first young pen, second old pen. E. J. Boyk, Rocklyn, fifth cock. Nick Sabadan, Spokane, fifth cock, fourth young pen.

Partridge Wyandottes—Eugene Boyk, first cock, first cockerel. John Fleming, Spokane, first old pen.

Silver Wyandottes—Peter Finch, Fruitvale, B. C., first cock, first hen, fourth pullet. W. H. Russell, Spokane, third and fifth pullet. Donald Smith, Spokane, first cock, second pullet, first young pen.

Golden Wyandottes—Sam Shirley, Spokane, first and second pullet. H. A. Raper, first cockerel, third pullet.

Columbian Wyandottes—Jenny Smith, Spokane, all awards.

Light Brahmas—Mrs. Benjamin Hildebrandt, Edmonds, first and second hen, first young hen.

Black Langshans—M. E. Taylor, Winona, all awards.

Buff Orpingtons—Mrs. B. Hildebrandt, first cock. Mrs. J. J. Critzer, Spokane, second cock, second and third hen, first and fourth cockerel, first and second old pen, first and third young pen. Mrs. James Wright, Richmond Highlands, third cock. L. M. Varney, Spokane, first hen, second and third cockerel, third old pen, second young pen, third and fourth pullet. R. C. Simpson, Seattle, fourth and fifth hen, fifth pullet, fourth old pen.

Rose Comb Buff Orpingtons—Hans Hansen, all awards.

Black Orpingtons—W. L. Reid, all awards.

White Orpingtons—John Sim, Deer Lodge, Mont., all awards.

Speckled Sussex—F. W. Hoffman, all awards.

Dark Cornish—A. Emskamp, Spokane, first cock, first, second and third hen. M. L. Lowe, third cock. Emmet F. Dix, Garfield, third and fourth cock, fifth pullet. Kennewick Cornish Club, Kennewick, fourth and fifth hen, first, second, third, fourth and fifth cockerel, first, second, third and fourth pullet, first young pen, first old pen.

Dark Single Comb Brown Leghorns—E. H. Rosenkranz, Colfax, first and second cock, first and second hen, first and second pullet, first and third cockerel. Adam Schaffer, Hillyard, third cock. Fred A. Johnson, Tacoma, second cockerel. Boone Avenue Poultry Yards, fourth cockerel. Boone B. Burke, third and fourth pullet.

Light Single Comb Brown Leghorns—Mrs. L. M. Starr, Rockford, first cock, second and third hen, first cockerel. Boone Avenue Poultry Yards, first hen, first pullet. E. H. Rosenkranz, third cockerel.

Rose Comb Brown Leghorns—Boone Ave. Poultry Yards, all awards.

Single Comb White Leghorns—Peter Finch, Fruitdale, B. C., first pullet, second hen. Fred A. Johnson, Tacoma, first, third and fourth cockerel. R. R. Upper, Seattle, first cock, first hen. A. Greener, second cock. Mrs. Fred Boyd, Garfield, fifth cock, fourth hen. Harold Cadwell, fourth cock. All Poultry Farm, Pasco, second pullet, first old pen. H. W. Hulbert, Moscow, Idaho, third pullet. Mrs. Nick Sabadan, fourth pullet.

Single Comb Black Minorcas—A. Hollings, Seattle, first cock, first and second hen, first and second cockerel, first, second and third pullet.

Rose Comb Black Minorcas—Boone Avenue Poultry Yards, all awards.

Buff Leghorns—Boone Avenue Poultry Yards, first cock, first and third hen, third cockerel. Harold Cadwell, second cock, second hen, fourth pullet. W. H. Worster, Opportunity, first cockerel. John Fleming, second cockerel, first, second and third pullet.

Buff Minorcas—O. R. Hopewell, Waterville, all awards.

Black Leghorns—F. E. Keith, Helena, Mont., first cock, first and second cockerel. Harold Cadwell, second cock, first hen. Mrs. H. W. Dickereson, Helena, Mont., first cockerel, first, second, third and fourth pullet. Boone Avenue Poultry Yards, second cock, first and second, hen, first cockerel.

Anconas—Boone Avenue Poultry Yards, first and second hen. John Coching, Rossland, B. C., first cockerel, first, second and third pullet, first young pen. Mrs. L. A. Thima, second cockerel. R. M. Owen, third cockerel, first old pen, second young pen.

Houdans—W. H. Russell, Spokane, first and second cock, first, second and third hen, first and second cockerel, first pullet. Ed McCoy, third cock.

White Crested Black Polish—H. K. Carter, Tacoma, all awards.

Silver Spangled Hamburgs—E. E. Enos, all awards.

White Cochin Bantams—J. D. Barrett, first cock, first hen, first cockerel, first pullet. Wesley Engstrom, second cockerel, second pullet.

Golden Seabright Bantams—J. D. Barrett, first cock, first hen, first and third cockerel, first pullet. J. E. Nowlin, Spokane, second cock, second, third and fourth hen, second and fourth cockerel, second, third and fourth pullet.

Silver Seabright Bantams—J. D. Barrett, all awards.

Barred Rock Bantams—Harold Craig, Spokane, all awards.

Black Cochin Bantams—J. D. Barrett, first cock, first hen, first cockerel, first pullet. H. C. Grimes, Spokane, second cock.

Partridge Cochin Bantams—J. E. Nowlin, all awards.

Light Brahma Bantams—H. C. Grimes, all awards.

Black Tailed Japanese Bantams—H. C. Grimes, all awards.

Silver Hamburg Bantams—H. C. Grimes, all awards.

White Rose Comb Bantams—H. C. Grimes, all awards.

Toulouse Geese—Mrs. O. O. Mills, Spokane, all awards.

Pit Game—Glen Hopkins, Spokane, all awards.

White Silkies—Harold Cadwell, Spokane, all awards.

Silver Campines—F. W. Hoffman, Spokane, all awards.

Golden Campines—Harold Cadwell, all awards.

Baby Beef Club

Ten boys and girls of Kittitas county have organized a baby beef club through the effort of W. L. Davis, the county agent. Arrangements have been completed for the purchase of 20 high grade Shorthorn steers from the Day & Rothrock farm at Sprague. C. M. Hubbard, live stock extension specialist of the state college, and A. F. Lawson, field representative of the American Shorthorn association, helped to select these animals for the club.

The members will feed and care for their animals during the spring and summer months and have them in prime shape for the Kittitas county fair and for the Western Royal Live Stock show at Spokane, where special prizes are offered for beef club work.

The following boys and girls have enrolled in the club: Jessie Woodhouse, Nora Waite, Meta Bennett, Val Bradshaw, Erling Hanson, Raymond Barnhart, Walter White, William Waldron Jr., Eugene Wilson, Robert Kresge.

SIMPLICITY

an outstanding feature—
of the NEW

CATERPILLAR

T 35 TRACTOR

Here is the machine of greatest simplicity—designed to save your time, money and temper. Look at its new and sensible features of accessibility—its elimination of non-essential parts.

Only three units to the entire machine—motor—transmission—trucks with track. Each unit complete in itself. Complete enclosure against dust and dirt.

Valves and camshaft are placed overhead—easy to get at by simply removing cylinder head.

Tappets, tappet guides and push rods are eliminated—no leads, wires, pipes or hose between the motor and the rest of the machine—nothing in the crankcase but the crankshaft.

"Caterpillar" T 35 Tractor is ideal for orchards, vineyards and berry fields; for general service on small acreage and for auxiliary service on big farms. It is the right size for road patrol work, hauling and general contracting. It has almost unlimited usefulness in belt work—pumping, sawing, grinding and other operations.

Like all "Caterpillar" Tractors it is built for service and backed by service, too. A factory and a service organization on the Pacific Coast assure you service anywhere, anytime.

Write at once for full information showing how "Caterpillar" T 35 will do your work quicker, better and at less cost.

Straw Shed Replaces Straw Pile

By H. J. LECHNER

Past experience on the farm of Lechner Brothers at Washougal, Wash., has shown the old straw pile to be a problem, even with a conscientious effort on the part of the owner to use this byproduct to enrich the soil. As these words were penned the writer could see the remains of one of the old straw piles piled up against a fence, where it had been occupying several square rods of ground during two crop seasons at a dead loss to the owners. Most, but not all, of the straw had been hauled away.

Up to the time of the coming of the straw shed, getting rid of the straw entailed too much work. It meant not only hauling onto the fields and spreading as well as possible from an ordinary rack, but hauling the necessary requirements for live stock bedding. Furthermore, it meant several additional haulings before it finally reached its destination—the manure pile.

Now the old field straw pile is gone forever on this farm, and so also is the problem of getting rid of the straw. Indeed it now has become a matter of making the straw reach. The writer asked the owners (his brothers) if much of the straw had been fed to the stock. They said that more could have been used, especially with the young stock and horses, but the supply wasn't sufficient.

The straw shed was built over a year ago, is 30x50 feet and 16 feet high to the eaves, and will accommodate 15 to 18 head of cattle and straw of from 20 to 25 acres of grain. Racks are provided on one side of the shed. The straw is worked down into the racks. The cattle pick it over before it goes onto the shed floor as bedding. The shed is provided with a water trough and is built so that the open front made to give light can be covered with canvas in coldest weather.

Last year the cattle were left out in this shed all winter. This gave them a freedom not known with the stanchion, and access to water at all times except for two hours each morning and evening when they were taken into the stable to be fed and milked. That the cows kept cleaner than in the stable goes without saying. The only difficulty in this regard, which was not so great, was during the early grass season.

This practice reduced the labor of keeping the stable clean and also made possible the best conservation of the liquid manure. Loss due to leaching was reduced to a minimum on this farm. The soil on this farm is naturally low in fertility and humus. The straw shed has greatly increased the efficiency in the use of crop residues and of the manure. It is not surprising at all that the owners declare this shed to be the best investment ever made on the farm.

Let Pigs Wean Themselves

To the Editor of The Washington Farmer: As I started to raise purebred hogs about three years ago, I wish to state my experience for the benefit of the beginner.

I bought a sow pig, a Berkshire. I bred her to a good boar, but her pigs did not seem to thrive, as I weaned them at five weeks. This year I am letting them wean themselves. The largest pig at birth weighed six pounds and on the 20th of July she was two months old and weighed 70 pounds. I am feeding the sow and pigs, 10 of them, five pounds of powdered milk, three pounds of corn, three pounds ground oats. The powdered milk is mixed at the ratio 1 to 6 of water.

My present herd boar was purchased from A. G. Franklin at Mt. Vernon. He is of the Gentry type. At present I have seven sows and next year will probably reach out and show at the fair outside of Whatcom county. I had good luck last year—three firsts and one second out of five head shown. To the beginner I would say not to wean the pigs—let the sow take care of that.

Best Cows

Are Found in the United States

Fifteen of the 16 greatest butterfat producing cows in the world—every one of them a supercow—are to be found in the United States, reports Professor W. W. Yapp of the University of Illinois (January 5) in an inquiry he conducted for the Associated Press. The leader of the list, however, hails from Canada.

Great as these cows are, the future will produce even greater, Professor Yapp predicts.

The Illinois dairy husbandry expert says:

"The only common ground upon which it seems advisable to attempt to compare dairy cows is butterfat production. It is not possible nor practicable to compare cows on the basis of milk yields, inasmuch as the breeds differ so markedly in both quantity and quality of the milk which they produce. They are very similar, however, in their total butterfat production.

"It is a long jump from 100 pounds to 1250 pounds of butterfat. Yet this amount just about represents the difference in production between the primitive cow and our present-day marvels. What would those original cows think and, more particularly, what would their owners think if they could see our newest supercow?

"It is extremely interesting to observe that Bella Pontiac, the highest butterfat producing cow in the world, would supply butter sufficient to feed 24 average families of four members each for the entire year, and that any one of the cows would feed 20 families, allowing 16 1-2 pounds of butter per person per year, which is the approximate average consumption, according to the United States circular No. 65 for 1918."

For Balanced Ration

I am milking six cows. I have plenty of oats alone, peas and oats mixed, about one-third peas. My hay is mostly clover with some "meskete" and a very little timothy. I also have about 15 tons of mangels. Do I need anything else for a balanced ration? How shall I mix it to make a balanced ration? How would you balance the following: Corn, clover, oats and peas mixed (one-third peas), oats, linseed oil meal, soy bean meal, middlings and mangels? Will cottonseed oil meal take the place of linseed oil meal when feeding mangels for a laxative? Would it be a good idea to grind up wheat myself and mix it instead of mill run and middlings? T. L.

Blaine, Wash.

Your first ration can be made very satisfactory by feeding from 30 to 40 pounds of mangels a day and of the clover hay all the cow will eat. As a grain mixture to go with this I would suggest you mix equal parts of oats alone and peas and oats mixed. I would suggest also that you feed a handful of linseed oil meal at each feed to each cow. If you find this too laxative, get soy bean meal, or cotton seed meal in place of the linseed meal.

I can not tell whether your corn is silage or grain. If it is silage you can substitute a corn silage for mangels in the above ration and get excellent results. If you expect to feed ground corn in your grain ration with mangels and clover hay, you will need to feed a little heavier with the peas and linseed oil meal.

In your third ration, presumably you have clover hay, mangels and also soy bean meal and middlings. In that case you would have to feed heavier on the oats and less of the linseed oil meal. A good ration with these feeds would be all the hay the cow will eat up clean and from 30 to 50 pounds mangels. The grain should consist of 400 pounds of ground oats and 50 pounds of linseed oil meal, or cotton seed oil meal and 100 pounds of middlings. If the ration is too laxative with the linseed meal, it will be well to use cotton seed meal only. I would not advise you to grind up wheat for feeding. Wheat does not make a good feed for dairy cows. It would be much better to sell it and buy millrun and middlings.

A. B. N.

VETERINARY

By DR. S. B. NELSON.

May Be Lung Worms.—Can you tell me what ails my hogs? They get sick all of a sudden and do not come to eat. They act as a small pig does with the thumps. This lasts from one to three days, then they have as good an appetite as ever, only they have a severe cough. H. W. H.

Thornton, Wash.

The description that you give of the trouble affecting your swine would make me suspect lung worms, but your description is not sufficient nor definite enough for me to say so positively. It might, of course, also be a bronchitis, during the early stages of which they do not come to eat and later, when the active symptoms disappear, the chronic cough remains. From 10 to 15 grams of potassium nitrate in three or four days may clear up the trouble.

Rattle in Throat.—I have a 3-year-old Jersey cow that is milking good, but she has a rattle in her throat and it affects her breathing. R. R.

Oriel, Wash.

The rattle that you hear in the animal's throat would indicate some disturbance either in the bronchial tubes or down in some of the fine ramifications of the lung tissues. Try giving your cow one-half dram of quinine once daily for three or four days—then stop and repeat the treatment in three or four days.

Cow Needs a Rest.—I have a cow that will freshen March 22 and I have milked her for 21 months. Would it be good judgment to dry her up or try to keep her giving milk longer? O. T. H.

Monitor, Wash.

I would be of the opinion that a cow that has given milk straight for 21 months might well need at least two months' rest prior to her next period of freshening, and I would suggest that it be given her.

Have Mule Examined.—I have a big mule about 16 years old and her right nostril is running a thick yellow mucus that has a very bad odor. At times she gets a lump between the eyes more on the right nostril that seems to open through the nose. She has been this way for about two years. Is it dangerous to keep her with other animals? E. G.

Wilbur, Wash.

Your animal may be affected with one of three diseases: Glanders, an infectious disease; pus infection of the sinus or cavities of the face, or it may be a diseased root tooth causing the trouble. The latter may cause the second, or may not. I would doubt that it was glanders. You should have a veterinarian examine the animal to see just what is the trouble, because if it is glanders the mule should be destroyed. If it is either of the other two the animal should be operated and restored to usefulness.

Fern in Alfalfa Hay—My alfalfa has quite a lot of fern in it. I am afraid to feed it to my horses. Is there any danger or is there any way to prevent danger if there is any? G. E.

Garfield, Wash.

It is questionable whether a limited amount of fern will cause any damage to your horses when fed with the alfalfa. It has been reported that when hay contains a very large percentage of fern it will cause digestive disturbances.

This Valuable Cow Book FREE!

Tells how to pick out Good Cows

How to Get it ↓

This 84-page book is worth its weight in gold. Its author, Hugh G. Van Pelt, a prominent dairy editor and former professor of dairying, is a practical dairyman and one of the best judges of dairy cattle in the country. It is so plain and simple that any one can use it as a guide in selecting good cows, and building up a herd for large and profitable production.

We will gladly send you this book free of charge if you will fill out the blank below and send us the names of five people who will need cream separators or milking machines within a year's time.

Any one who is wasting cream by using an old, worn-out or "balky" separator, or by hand skimming, needs a De Laval Separator. Any one who is milking ten or more cows by hand needs a De Laval Milker.

If you cannot give five names, we will send you this book on receipt of 20 cents.

DE LAVAL PACIFIC CO., 61 Beale St., San Francisco, Cal.

Please send me Van Pelts Cow Demonstration Book, for which I am sending you the names of five people who need De Laval Cream Separators or Milkers. (Include your own name if you need a separator or milker.) 79

More Silage Per Horse Power-Per Hour

EVERY Papec Ensilage Cutter, regardless of size, is guaranteed to cut and elevate more silage with the same power than any other blower cutter. It keeps the silage moving in a steady stream which prevents choking. The powerful air blast, concentrated in a pipe of small diameter, will put the silage over the top of the highest silo.

THROWS AND BLOWS

The Powerful **PAPEC** Ensilage Cutter handles more silage with less power because every part functions smoothly with every other part. It is tuned to big production. Our big modern plant—the largest devoted exclusively to the making of ensilage cutters—makes possible the huge output enabling us to sell at a low price. A patented, standardized design, highly skilled workmen and a rigid system of inspecting and testing, make possible the Papec Guarantee—the broadest and most positive of all. Buy a Papec.

Our catalog shows how Papec Ensilage Cutters save dollars for Papec owners. Write for it today.

Poisonous Wild Parsnips

Other Popular Names by Which They Are Known

Will you please describe and illustrate the poisonous wild parsnip? I have seen cattle eat the Giant European parsnip greedily with no bad effects.

G. W. D.

Our correspondent evidently refers to cicuta. This poisonous plant has a number of popular names, of which the most

Wyoming Water Hemlock (Cicuta Occidentalis); young plant.

common is "cowbane" or "water hemlock." In the northern region of the west it is frequently called "parsnip" or "wild parsnip." Other names less common are "snake root," "snake weed," "beaver poison," "muskrat weed," " spotted hemlock,"

Wyoming Water Hemlock (Cicuta Occidentalis): matured plant.

and "spotted parsley." Scientists of the U. S bureau of animal industry review the fact that many deaths both of human beings and domestic animals are caused every year by cicuta or water hemlock, and declare that it is the most violently poisonous of temperate region plants and yet it is not generally recognized. This plant grows in wet places and is especially common in some parts of the west along irrigation ditches. It has the thickened root stock with roots which sometimes take the form of a group of tubers.

The bureau of animal industry also declares that only the root of cicuta is poisonous. Cases of poisoning are more frequent in the spring, partly because roots are more likely to be noticed at that time and partly because they appear to be more poisonous then than later in the season, farmers in their plowing sometimes bringing to the surface a considerable number of roots, and these are eaten by cattle with resultant sickness and death. When green feed is scarce the bright green pulp and stock become quite attractive to grazing stock and they eat them freely. They even eat into the crown of the root of the plant.

When the root of the plant is cut open drops of an aromatic oil are seen. These give the root a peculiar odor and are popularly thought to be the source of the poison. The poison is indeed in the root, but is secreted in the form of a resin which is distinct from the oil although the poison is most deadly. The fact that it is confined to the roots rather than extending to the top and seed, accounts for the fact that it causes comparatively few deaths.

Lambs on the Farms

Lambs were raised in 1919 on 374,771 farms, or 5.8 per cent of all farms in the country, according to the fourteenth census. The total number of lambs raised was 13,691,115, and the average per farm reporting was 36.5.

Six states reported over 700,000 lambs raised on farms in 1919, as follows: Montana, 977,827; California, 897,136; Ohio, 884,414; Idaho, 786,780; Wyoming, 773,286, and Oregon, 763,890. The following states reported an average of more than 200 lambs raised per farm; Nevada, 719.7; Wyoming, 437.6; Arizona, 409.5; Montana, 297.7; New Mexico, 232.9, and California, 223.4.

In 1919 there were 977,827 lambs on the farms of Montana, 786,780 lambs on farms of Idaho, 763,890 on the farms of Oregon and 238,018 on the farms of Washington.

Organize Cannery

Berry growers in the vicinity of Kirkland, King county, with the assistance of business men, have organized a small cannery which will use their fruit for the manufacture of jams and jellies. A manager was secured, machinery installed and the plant was operating early in September, 1921, under the name of the Case Conserve company.

Officers of the association are: J. P. Farrer, president; P. J. Case, vice president and factory manager; S. T. Hills, secretary-treasurer; R. G. Allen, assistant secretary-treasurer, and Mrs. F. W. Case, director.

At Milking Time

That's when it Proves its Worth

DOESN'T it stand to reason that if a cow's milk-producing organs are out of order there is certain to be a reduced milk flow? Stands to reason, too, that there will be enough loss in just a few milkings to more than offset the time and slight expense of giving prompt medicinal assistance to a cow that is in any way "off-color."

This is where Kow-Kare comes in. In a great majority of the best dairies this cow medicine is used regularly, at intervals during the housed-in winter season. When the cow's producing organs are put to severe strain by the loss of pasturage and the use of heavy concentrated foods and roughage, Kow-Kare will avoid a break-down by keeping the digestive and genital organs in a healthy, normal condition. Regularly at milking time you get big premiums on every penny invested in Kow-Kare.

More Profit *in the* Milk Can

COWS must be kept healthy if they are to show a profit. Most of the diseases common to cows can be successfully and easily treated at home by using Kow-Kare according to directions. Barrenness, Abortion, Retained Afterbirth, Scouring, Bunches, Milk Fever, Loss of Appetite, etc., are promptly cleared up by Kow-Kare because it acts directly on the organs where these diseases originate. The use of Kow-Kare for two weeks before and after calving works wonders in carrying the cow over a time when her powers of disease-resistance are greatly lowered.

A package of Kow-Kare, plus our valuable free book, "The Home Cow Doctor," will put more profit in the milk can and set your mind at ease. It's the cheapest form of health insurance.

General stores, feed dealers and druggists sell Kow-Kare at the new reduced prices of 65c and $1.25.

POULTRY

"Get the Eggs"

"Don't waste your time wondering why a White Wyandotte lays a brown egg. Get the egg."

This is the suggestion which Bayard H. Moul, western Washington poultryman, gives to the poultry breeder who questions the brown egg for market purposes. Mr. Moul said further that there is a premium on brown eggs for the local market on account of their larger size, and some customers even prefer them because they believe they have a richer flavor.

"We run our flock entirely on the trap-nest method," explained Mr. Moul, "and we don't want a hen in the flock if she will not come up to the 300-egg mark. One need not sacrifice type in order to get egg production. They should go hand in hand. We are thus able to secure dependable setting eggs, and are better able to mate fowls for the improvement of the flock.

"The White Wyandottes have many good points, such as being good layers and fine table birds. They are also very docile. We never use a high fence to keep them in, but a three-foot fence is sufficient if they have the proper feed.

Undoubtedly part of Mr. Moul's success in the poultry business is due to his use of modern business methods. He explained his plan of sending out a price list every spring to a regular mailing list, in order to keep his customers in touch with his marketable stock. Additional names are obtained each year from answers to advertisements in the local papers. After the recipt of this mailing list the buyer is ready to send his order, as the list answers all questions as to quality, number for sale and price. Further correspondence is unnecessary, and the prospective buyer either sends in his order or looks elsewhere.

Poultry as Side Line

"Poultry raising is merely a side line with me, since I am an electrician by trade," said R. C. Simpson of Seattle, who was secretary of the midwinter poultry show put on by the Washington State Poultry association in January. "I started out with a small pen of Buff Orpingtons and have accomplished very satisfactory results for the amount of time it takes. I have laid particular emphasis on the sale of hatching eggs.

"I prefer the Buff Orpingtons because they are a utility breed, are good meat birds and they lay a large egg. I had one hen that laid 280 eggs, but she does not score as high as some of the others when it comes to conformation. I am mating the birds so as to build up a type of high producers.

"Whenever I get an exceptional bird I keep her eggs and hatch them for my own use in order to maintain a high quality of the flock. Such method is necessary if you intend to increase the quality of your flock." Mr. Simpson told how the promoters of this breed had worked to Americanize the bird, which was originally an English breed. Our standard, he said, calls for a heavier bird, with more length of body and a longer saddle—both types were represented at the poultry show this winter.

Any one going into the poultry business in the Puget sound district should follow the Shoup methods," concluded Mr. Simpson. "They have made a study of all conditions and it is certain that no one can go wrong by following their suggestions. If a beginner will but study the bulletins from the state experiment station and put their ideas into practice they should have no trouble getting started in the poultry game."

Lime Is Essential

"If your hens are not getting sufficient lime in their food you are either losing money or not making as much as you might," says a writer on poultry subjects, following a series of experiments conducted to determine the value of lime in the poultry ration. He declared that if lime were systematically provided for the hens the increase in egg output would be sufficient to pay the taxation bill of the entire state.

"What does lime, or calcium do, that is so important?" he inquires, and answers the question himself by telling what he found out in the experiments that he conducted:

"First, the egg is made in three principal parts: the wolk, the white and the shell (the soft shell or shell membrane belongs to the white), and nature has given a law to the hen that if she can't make a complete egg she should not make a piece of an egg. Freak eggs are made by accident.

"In testing this out we found further that if we fed a hen on a ration that would make 100 yolks, 40 whites and 100 shells, she could make only 40 eggs since the white part of the ration was the limiting factor. Or, if we fed a ration which would make 100 yolks, 100 whites, and only 25 shells, the hen could make only 25 eggs, for the shell material was the limiting factor.

"Actual tests where the hens were kept in a floored pen where they could get no shell building material showed that a hen can get shell building material out of the feed and water to make only about one egg for every ten eggs the feed would make and that shell building material must come from some other source than ordinary feed.

"Until we conducted these tests we thought that a lack of shell building material would cause soft shelled eggs. But we found this view incorrect, and also that a lack of shell building material would cause defective shells to a certain extent after which it would prevent production altogether.

"To make a rough estimate of the cost of the different parts used in 200 eggs, we figure the 200 yolks would cost about 65 cents; the 200 whites about $1.33, and the 200 shells would cost about 2 cents. This is a comparative cost of the three parts of the egg where we buy the feed; but from the hen's viewpoint they are all worth exactly the same.

(Editor's note: The above figures if valuable must be considered as comparative only, since feed cost varies so widely from place to place and time to time.)

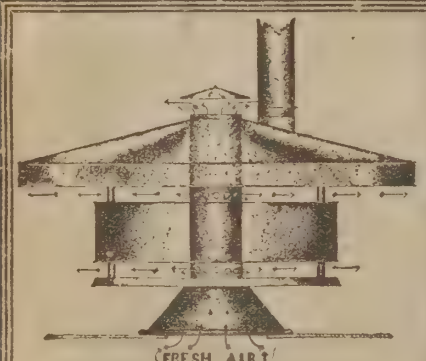
"On many farms we find flocks of from 100 to 200 hens with not enough available lime to make a dozen eggs. Such flocks lay only the number of eggs for which they can get shell building material from the feed and water given them. In such cases the flocks are a loss and the owners are disappointed and sell them off, usually to start with another breed or variety to have the same story repeated—and all the time when the sole trouble was a lack of lime.

Not Only the Shell.

"We have discussed the use of lime thus far only from the shell producing standpoint, since we believe the illustration is clearer in this case than where lime enters into other consideration. However, calcium or lime is used in other ways. It is used in the blood, muscles and bones. In fact, almost every tissue depends on

(Continued on page seventeen.)

LEE'S LICE KILLER



Kills lice, mites, bed bugs, etc., affecting poultry. Spray or paint on roosts, etc. Gets body lice on chickens, too. Works while they sleep. No dusting, dipping, greasing or handling. Saves lot of unpleasant work. At most towns, at store handling Lee Poultry Supplies. Write for information and FREE Book.

FOREMOST Because of Merit

BUCKEYE "Colony" Brooders are foremost because of merit. They have revolutionized chick raising. Literally they make three chicks grow where one grew before; reduce the labor to a fourth and cut the expenses to half. These brooders have entirely removed the great mortality that made brooding so hazardous. Burn coal, oil or gas.

Endorsed Everywhere

Hundreds of thousands of poultry raisers depend on Buckeye "Colony" Brooders as a result of experience. Experiment stations endorse them unreservedly. Your way to success is with these wonderful brooders. Sold under a positive money-back guarantee by 15,000 dealers.

The reasons for this unquestioned superiority are set out in our new booklet, "The Revolution in Chick Raising," a copy of which should be in the hands of every chicken raiser. Write for it today and place your chick raising on the securest of foundations

ORCHARD

GRANVILLE LOWTHER
EDITORIAL CONTRIBUTOR

The Filler Tree

It may be all right to include filler trees of various kinds when starting a young orchard, but when maturity is reached they should be taken out. This is the opinion of Professor Marris of the Washington State college horticultural division.

Professor Morris is a strang believer in giving trees plenty of room, not only because of their draft upon soil fertility when in heavy bearing, but because of the better light they will secure and the better color they will consequently give to their fruit. He believes that in the average orchard of the Pacific northwest there should be no more than 48 mature apple trees to the acre. Too many orchardists, he says, cut off the lower, spreading limbs when they begin to interlap, thus tending to produce tall, slender trees instead of lower, spreading, more vigorous ones.

He declares that where the tops are interlocked it is certain that the root systems are also interlocked and competing with each other for plant food.

Cherry Trees Die

I have some Bing cherry trees that are dying. It looks like an insect must be eating the leaves, as one layer of the leaf disappears first, then it gradually dies and drops off. I would like to know what to do for them, as they are quite young trees. M. M. S.

Moscow, Idaho.

From your question and description of the leaves of your cherry trees I should think that the cherry slug was eating the leaves. This insect appears usually about the time of or immediately following the ripening of the cherries and if the insects are numerous the leaves are greatly injured and often nearly destroyed.

If you will spray your trees with arsenate of lead, spraying at the rate of four pounds of powder to 200 gallons of water, you should control this insect. If you have only a few trees and they are small you can control the insect by sprinkling dust of some sort on the trees, such as air slaked line or even ashes or road dust. If you have many trees and they are of any great size it will pay to spray with the lead spray.

L. E. LONGLEY, U. of I.

Packing Grapes in Sawdust

The remarkable development of the drum Emperor grape industry, with red wood sawdust as a feature of the packing, has been the source of a great deal of comment. To compete with Almeria grapes grown in Spain and packed in cork dust in small barrels California has adopted the drum and now supplies the late fall and holiday markets with Emperor grapes and to some extent California grown Almeria fruit. Experiments in packing and shipping began in 1910. By 1916 356 cars were shipped and in 1920 515 cars were handled.

During the earlier years of the sawdust packed drum grape shipments redwood sawdust entirely was used, this being rather plentiful in California. It was treated and dried out and run through a drum machine to wear off all sharp points and rough edges on the particles so that the tender skin of the grapes would not be cut by the packing. Redwood sawdust prepared in this way was found to be entirely satisfactory and absorbed the moisture and tended to keep the berries apart so that they carried and stored satisfactorily. During the last couple of seasons, however, owing to the inability of some of the packers to get redwood sawdust, experimentation with spruce sawdust for the purpose was carried on, and it has been developed that the spruce sawdust is just as good as the redwood for the purpose. It has even been found that there is some preference for the spruce sawdust, because of the contrast which the light sawdust gives against the dark grapes, when the packages are opened, in the appearance of the package. This makes packing in spruce sawdust preferred by some buyers.

Inspection at Loading Station

The department of agriculture recently agreed to consider the suggestion of the fruit growers of Oregon, Washington, Idaho and Montana that federal inspection be made at the loading station instead of at the destination of shipments.

Northwest fruit growers have sustained heavy losses in the last few years by reason of large consignments of apples and pears being held up or condemned in several large cities on the charge that the fruit contained an excessive amount of poison spray residue. In some cases the fruit was a complete loss, while in others the authorities were induced to release it after promises to have the growers reduce the use of the spray or to wipe the fruit before shipment. The growers contend that all loss would be obviated by having the inspection made at the loading stations in the northwest.

The Intercropping System

Cultivated crops may be grown successfully between the trees in a young orchard, but it is not recommended by experienced orchardists that such cropping be practiced after the trees reach a condition of mature bearing. If the best success is to be obtained from the orchard crops must not be grown between the trees after they reach a stage of development where they will require moisture and plant food that are being taken by the cultivated crops.

It has been recommended that cultivated crops be not grown in apple orchards after the trees are more than 5 or 6 years old. The practice should be discontinued even earlier in peach and pear orchards. The cover crop in the latter should be eliminated after the second or third year.

Pears for Commercial Crop

J. H. Stephen of Peshastin tells of his experience with an apple orchard in which he planted Anjou pear trees as fillers. At the time of purchase part of the apples looked as though they would have to come out and the pears were planted in between, so they would be producing while the apples could be grafted and worked into shape for a better orchard. That was two years ago and the pears have done so well that Mr. Stephen has decided to leave them and cut down a large part of the apple trees.

T. M. MURPHY, Kingston, Wash.—"I read everything in THE FARMER every week, then put it away for a while and later get it out and read it again, for fear I have missed something. I wish we could have twice as much matter as you are giving us."

New Lamp Burns 94% Air

Beats Electric or Gas

A new oil lamp that gives an amazingly brilliant, soft, white light, even better than gas or electricity, has been tested by the U. S. government and 35 leading universities and found to be superior to 10 ordinary oil lamps. It burns without odor, smoke or noise—no pumping up, is simple, clean, safe. Burns 94% air and 6% common kerosene (coal oil).

The inventor, W. W. Johnson, 31 N. Fifth St., Portland, Ore., is offering to send a lamp on 10 days' FREE trial, or even to give one FREE to the first user in each locality who will help him introduce it. Write him today for full particulars. Also ask him to explain how you can get the agency and without experience or money make $250 or $500 per month.—Adv.

John Deere Implements and repairs are carried in stock by John Deere Plow Co., Portland, Ore.; Spokane and Seattle, Wash., and Boise, Idaho.

BETTER PLOWING AT LOWER COST

There are more acres of good plowing in it—it costs less per year and per acre—that's why there is real economy in buying the **John Deere Steel Gang.**

Farm implements are your cheapest investment. The University of Missouri found the implement cost of producing a crop of corn last year to be only one-ninth the total production cost per acre. Based on this year's prices, the cost will be only one-thirteenth.

Great strength without unnecessary weight — this plow is built especially for difficult plowing conditions of Pacific Coast states.

All-steel construction —no castings to break. No pipes to bend.

Beams are guaranteed not to bend or break. Unusually strong bracing.

Turns square corners without raising bottoms from the ground. Even width of cut can be maintained on hillsides or around curves by means of landing lever.

Powerful lifting springs make it easy to raise or lower bottoms.

Bottoms to suit your soil — John Deere steel or chilled; they scour, wear long and make good seed beds. Quick detachable shares.

See the John Deere Steel Gang at your John Deere dealer's.

Write today for a free booklet illustrating and describing this plow. Address John Deere, Moline, Illinois, and ask for free booklet SL-847

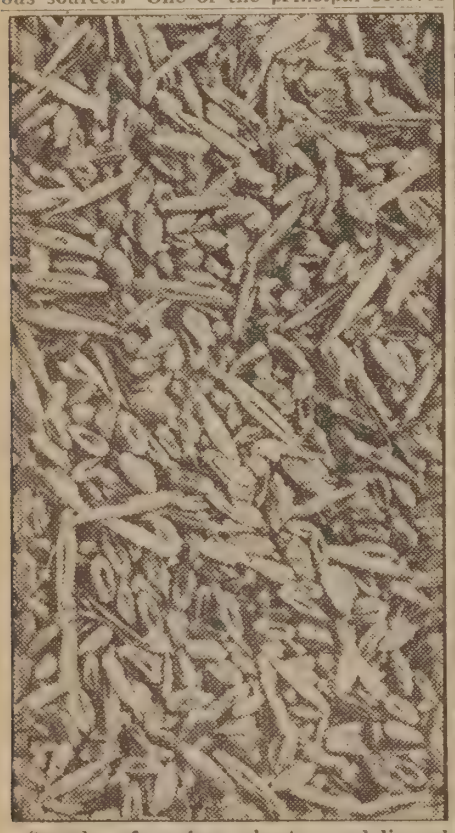
Wheat "Dockage" Is Costly

The United States produces about 800,000,000 bushels of wheat each year, and about one-third of this, or over 250,000,0000 bushels, is spring grown.



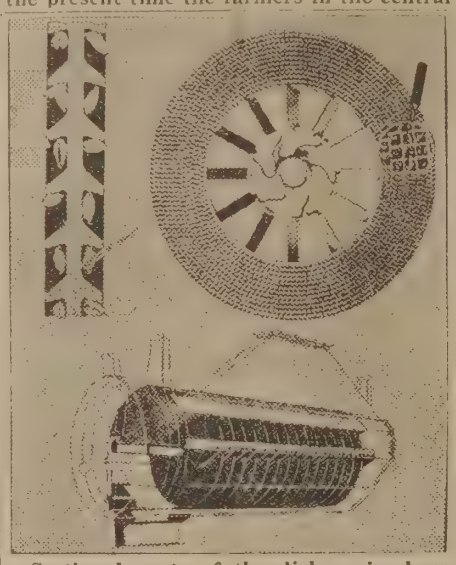
The official grain standards of the United States for wheat designate such weed seeds as can be removed readily from the wheat by the use of appropriate sieves, cleaning devices, or other practical means, as "dockage." When wheat is sold on the market the weight represented by the dockage is deducted from the total gross weight before payment is made for the wheat.

The Minnesota grin inspection records for the last 18 years show that the percentage of dockage in wheat arriving at terminal markets in Minnesota has been increasing.

Some of the material removed as dockage has a certain feed value, while other constitutent parts of the dockage not only have no feeding value, but are actually harmful as a feed, says Robert H. Black, in charge of the Minneapolis office of the grain cleaning investigations of the United States department of agriculture.

The weed seeds that are in the threshed wheat must be removed before the wheat is ground into flour. Removing those seeds at the flour mills is not only expensive, hut is also economically wasteful for many reasons, one of which is that the repeated handling of wheat through the elevators and during shipments breaks up many of the wheat kernels.

Dockage gets into the wheat from various sources. One of the principal sources



Sample of spring wheat, as delivered from a threshing machine containing a heavy admixture of dockage, mostly wild oats, which illustrates the desirability of recleaning wheat at time of threshing.

is the sowing of foul wheat just as it comes from the threshing machine without any further cleaning.

These small pieces of cracked wheat, which would make good flour if they could be saved, are removed with the weed seeds when the wheat is cleaned in the flour mill, because the small pieces of cracked wheat are approximately the same size as the weed seeds and are removed in the cleaning operation.

A greater economic waste is due to the expense of handling the dockage itself. At the present time the farmers in the central

Sectional parts of the disk grain-cleaning machine. Top, showing arrangement of the disks in the frame; lower left, side view of one disk; lower right, cross section of disk illustrating how oats are separated from wheat.

northwest haul this dockage in the wheat to the elevators and sell the wheat without receiving anything for dockage. Much valuable space is occupied in every wagonload of wheat, in every country elevator, in every carload of wheat, and in every terminal elevator and flour mill by the dockage in the wheat.

If this dockage could have been removed at the time of the threshing, the farmer would have been able to feed that part of the dockage having feed value, and he would also have saved the expense of hauling the dockage to the elevator.

Tariff Demanded by the Farmers

The revision upward of all of the rates proposed in the agricultural schedule of the Fordney tariff bill is practically demanded in a schedule prepared by the agricultural bloc of the senate and presented to the senate finance committee by Senator Gooding of Idaho on behalf of 25 republican senators from the agricultural states.

These rates, Senator Gooding told the committee, are the minimum offering protection to the agricultural industry. Many of them are double the rates proposed in the pending tariff bill. The farmers demand a tariff of 15 cents a pound on long staple cotton and 5 cents a pound on short staple cotton; duties on hides and material increases in the rates on wool.

The senators who participated in the preparation of the new schedule were Senators Johnson and Shortridge (California), McNary and Stanfield (Oregon), Capper (Kansas), Nicholson and Phipps (Colorado), Gooding (Idaho), Norbeck (North Dakota), Sterling (South Dakota), Jones and Poindexter (Washington), Oddie (Nevada), Ladd (North Dakota), Bursom (New Mexico), Cameron (Arizona), Kenyon (Iowa), Warren (Wyoming), Spencer (Missouri), Willis (Ohio), Harreld (Oklahoma), Weller (Maryland), New (Indiana), Keyes (New Hampshire) and Townsend (Michigan).

Maintain Earth Roads

By the end of 1921 Nebraska will have expended over $11,000,000 in the improvement of its roads, which is the largest business the state and county officials have had to handle.

The greatest problem Nebraska has to contend with in its road improvement is the maintenance of its earth roads, due to the many and varied types of soil to be dealt with. It was decided to standardize the earth roads in the state so that they would conform to a uniform cross section and grade. In order to do this a number of crews were organized, equipped with large tractors and heavy 12-foot graders. Skilled operators were put in charge of such outfits and provided with the necessary camp equipment and sent into various localities.

Thirty of these outfits were assigned and from them excellent results obtained. After the roads had been standardized in shape by three heavy maintenance crews, patrol work was at once started, and the surface was kept in a race track condition throughout the season.

Nearly 4000 miles of such roads were graded and maintained at an approximate cost of less than $200 per mile. The roads are patrolled systematically by tractors, trucks and teams. Six hundred miles of highway are patrolled with teams, while 790 miles are being worked with tractors as motive power.

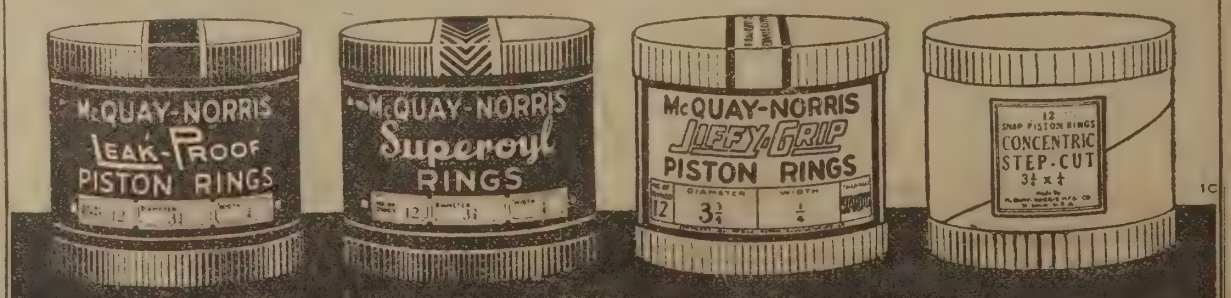
McQUAY-NORRIS
PISTON RINGS

For Every Purpose and Price

It pays to replace worn and leaky piston rings with McQuay-Norris Piston Rings. They will increase power, save gas and oil, and decrease oil and carbon troubles in any make or model of passenger car, truck, tractor or stationary engine. The McQuay-Norris line is complete for every need. Through the addition of McQuay-Norris WAINWRIGHT Pistons and Piston Pins to the McQuay-Norris Piston Ring line, you can now secure for your gas engines complete McQuay-Norris-made Piston, Piston Pin and Piston Ring equipment.

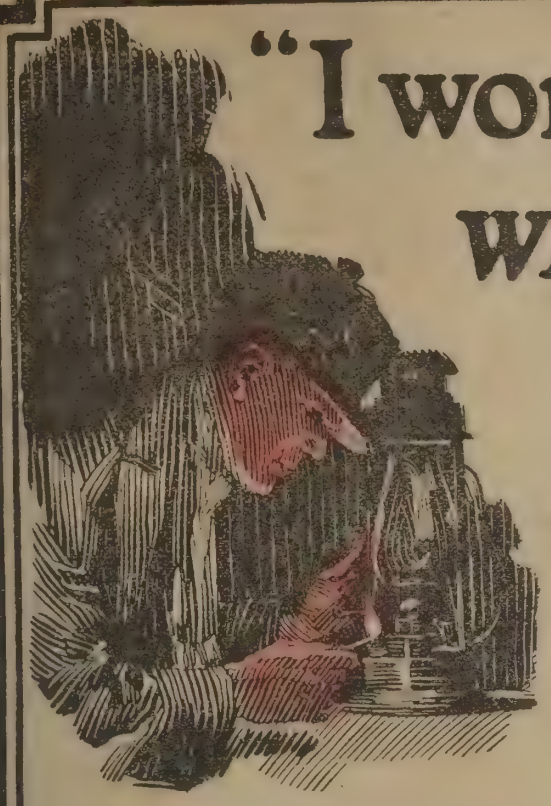
McQUAY-NORRIS WAINWRIGHT PISTONS & PINS

Send for Free Booklet — a valuable explanation of the relationship of piston rings to gas engine operation. Address Dept. BD.



McQuay-Norris Mfg. Co., St. Louis, U. S. A.
Canadian Factory: McQuay-Norris Mfg. Co. of Canada, Ltd., Toronto, Canada.

$1.25 In Canada $1.50 LEAK-PROOF—for greatest power. Prevents loss of gas by means of its exclusive two-piece design, which creates even outward expansion all around the ring, thus maintaining equal pressure against the cylinder wall. Always install with one Supercyl Ring in the top groove.



$1.00 In Canada $1.25 Supercyl—to control oil. Its special reservoir collects excess oil from the cylinder wall on each down stroke, emptying on each up stroke, which ordinary grooved rings cannot do. Install one in top groove, regardless of which compression rings are used in lower grooves.

50c In Canada 50c *JIFFY-GRIP*—a lower-priced, one-piece ring that has proved its efficiency within the limits of one-piece design. Has an improved non-butting joint — and velvet finish that "seats in a jiffy." Always install in combination with one Supercyl Ring in top groove of each piston.

Snap Rings — of the highest grade. Raised above the ordinary level of "bulk" rings by the care and uniform accuracy of McQuay-Norris manufacturing methods. Packed twelve rings to the carton—and rolled in waxed paper which preserves them from rust and breakage.

Made of Electric Iron

"I won't be another year *without* Delco-Light"

"LAST YEAR I was going to equip my farm with electric light and power. I was going to have the house wired---give my wife an electric iron, put lights in the barn and farm yard, and get a power stand to do the chores. But I put it off. I thought I could get along well enough without.

Now I realize how much happiness, how much comfort and how much profit I lost as a result of that decision.

In the evenings after a hard day's work I would sit with the family crowded around the table, and try to read by the dim, eyestraining light of a smelly coal oil lamp. There wasn't much happiness in that. There didn't seem to be time enough for anything. Before daylight there were chores to do; feeding, milking, stock to water. Work, work, work---every member of the family---every minute of the day. I saw my wife carrying water and doing a dozen jobs that no woman ought to do, and I couldn't help but wonder how long she could stand it.

* * * * *

TODAY, our home is equipped with Delco-Light and what a difference it has made! It is a cheerfully lighted home, where all of us can enjoy the evening hours---where the children read and study and play, and where we delight in entertaining our friends and neighbors.

Delco-Light has banished the coal oil lamps and lanterns with all the work of cleaning chimneys and trimming wicks.

Delco-Light has provided power to milk the cows and separate the cream, power to run the washer and wringer, sweep the floor and pump the water---power that has given me time to sell my crops as well as raise them.

Delco-Light has brought relief from the daily irksome duties, contentment to all of us and, yes, it has saved us more than its cost."

If you are interested in better farm life, and bigger profits, write for the Delco-Light catalog and information on new reduced prices.

Sale of Holsteins

With zero weather, which had prevailed for several days, the dispersal sale of Holsteins of Charles G. Sprong at Grandview, Wash., was more of a success than could hardly have been expected. Bad weather did not keep a large and interested crowd from attending and, in spite of a little discomfort, bidding was generally brisk and spirited. The few head consigned by neighbors sold as well as Mr. Sprong's, and the 42 females brought a total of $10,590, or an average of $252.20. Bulls, as is usual at most sales, did not go well, one well-bred calf selling at $25. Most of the offerings went to neighbors in the Yakima valley.

R. N. Burnett of Sunnyside, Wash., bought the two top cows, paying $550 for one and $500 for the other. The second one, Lady Ormsby Kakenstein, is 10 years old, but a grand old cow. The other, Model Duchess Girl, is a show animal as well as richly bred, going back on both sides to King Segis. F. L. Shannon of Walla Walla, Wash., paid $450 for Lady Longfield Segis Fobes, and took home six for a total of $1505. Robert Robinson of Yakima got a good one in Duchess Model Segis Annie for $450. Some of the animals went below their worth, but, with conditions considered, consignors did not complain. Colonel George Gue was effective on the block, as always, and he had good ring help by Colonel Hobson. The following is a complete list of the females sold:

Females consigned by Charles G. Sprong, Grandview, Wash.:

Model Duchess Girl, born January 6, 1916—R. N. Burnett, Sunnyside, Wash. $550
Leda Ormsby Kakenstein, born July 25, 1912—R. N. Burnett 500
Lady Longfield Segis Fobes, born January 13, 1916—F. L. Shannon, Walla Walla, Wash. 450
Duchess Model Segis Annie, born September 3, 1919—Robert Robinson, Yakima, Wash. 450
Maldeta Fobes Segis, born January 20, 1920—E. V. Taylor, Selah, Wash. ... 375
Rose Jettine Cornucopia 2d, born September 20, 1917—R. L. Rice, Grandview, Wash. 325
Uneeda Abbie Douglass Korndyke 6th, born August 3, 1919—W. C. Nye, Sunnyside, Wash. 325

Alma Gluck, born December 29, 1916—F. L. Shannon 200
Nora Irene Mercedes DeKol, born April 17, 1918—F. L. Shannon 200

Females consigned by F. D. Gano, Grandview, Wash.:

Lady Johanna Pietertje Beets—C. G. VanBelle 245
Ormsby Segis Star—C. D. Cornell, Grandview, Wash. 115

George M. Chase bought a bull from the Sprong consignment for $175; D. J. Lenehan of Prosser, one for $15 and Robert Wall of Prosser one for $125. Two bull calves were sold below $100 by Mr. Sprong and one by Mr. Gano.

Method of Tanning Horse Hides

To the Editor of The Washington Farmer: I saw in your paper several inquiries for a good tanning solution for tanning hides with the hair on or off, so am sending you one that I have tried and found to be all right I will tell how to tan a horse hide so as to use it on the farm for straps of all sorts.

First remove the hair, mix, for an average sized hide, four quarts of air-slaked lime in a half barrel of water and stir briskly, then immerse the hide and let it remain there three to five days, stirring two or three times daily. Try from time to time to remove the hair with any blunt tool, such as the back of a case knife, removing all the hair, then rinse in clean water. Now cut the hide in two by cutting up and down the back and cut off legs close to body. The legs make fine belts and shoe laces. Then make a solution of three pounds of alum crushed, half pound of saltpeter and two pounds of salt, with enough water to fully cover the hide. Let it remain two weeks, stirring once or twice daily, when the hide will be tanned. Take out of solution and hang up to dry in a warm place, but not hot, away from the sun. Then when not quite dry soften by rubbing well or by pulling around a post until dry. The softness of the leather will depend on the amount of work put upon it after taking it out of the solution.

For convenience in handling, the hide may be cut in six strips.

If waterproof leather is wanted, rub in neatsfoot oil when about dry.

Sunnyside, Wash. S. A. WELLS.

Won From 12 States

The live stock judging team representing the animal husbandry department of the Washington State college defeated 12 out of the 21 college and university teams that competed at the recent International Live Stock show at Chicago. Among those over whom the Washington team placed was the team from the far-famed Iowa State college at Ames. The team from Ohio won first place, with a score of 4178. Washington ranked ninth out of the total of 21 teams competing, with a score of 3883. Three classes each of hogs, horses, cattle and sheep were judged.

In preparation for the Chicago contest two preliminary contests were held at the western shows. At the Western Royal the state college won over Idaho and Oregon with a total of 6253 points out of a possible 7500. At the Pacific International the state college team took second place with 7785 points, Oregon Agricultural college winning with 8089 points out of a possible 10,000.

The Washington team was the only far western one to make the trip to Chicago. It consisted of Ellison E. Mundy and Martin A. Alexander, both from Ellensburg; Walter E. Haun of Elberton, Clifford C. Gay of Tacoma, Orland H. Tonnemaker of Yakima, Daryl B. Leonard of Chehalis and J. Howard Dobbin of Enterprise, Ore. Professor Howard Hackadorn, head of the animal husbandry department, coached the team, and no little credit is due him for the team's standing.

Darn Stockings; Make Dresses

The Uncas Sewing club of Jefferson county report as their year's work the making of 53 garments at a total saving of $77. Mrs. Harriet M. Andrews is their local leader and has helped the girls to keep their club together and gave them many new ideas about sewing. The girls have learned to darn stockings as well as to make dresses. One of the members, Alice Knight, was the only girl who was able to break the long list of winnings made by the clubs of Pierce county at the Western Washington fair at Puyallup last fall.

The membership of the club is as follows: Francella Taylor, Dorothy Reid, Florence Purviance, Magdaline Peterson, Alice Knight, Mariance Andrews and Madeleine Andrews.

One third of your life is allotted to sleep. Do you get your share?

The most important period in the process of applying nutrition to the repair of the body is while you are asleep. For the most favorable transformation of digested food into nerve and cell tissue, so doctors tell us, sleep is absolutely essential.

Is it any wonder that those who suffer from lack of proper sleep are weak, pale and lacking in energy or ambition?

One of the causes of insomnia is nerve-irritation from tea and coffee drinking. Tea and coffee both contain caffeine, which has a tendency to cause undue stimulation. The irritating effect of caffeine often results in insomnia, depression, and a weakened nervous system.

You can easily overcome these troubles by drinking Postum instead of tea or coffee. Postum is a delicious cereal beverage and it is absolutely free from caffeine, or any other harmful substance.

Ask your grocer for Postum. Drink this refreshing beverage for ten days. Then see if you will not feel better and more clear headed, and if you do not sleep better at night—as so many other people have proved for themselves.

Postum comes in two forms: Instant Postum (in tins) made instantly in the cup by the addition of boiling water. Postum Cereal (in packages of larger bulk, for those who prefer to make the drink while the meal is being prepared) made by boiling for 20 minutes.

Postum *for* Health
"There's a Reason"

Made by Postum Cereal Co., Inc., Battle Creek, Mich.

—but they found success in Western Canada

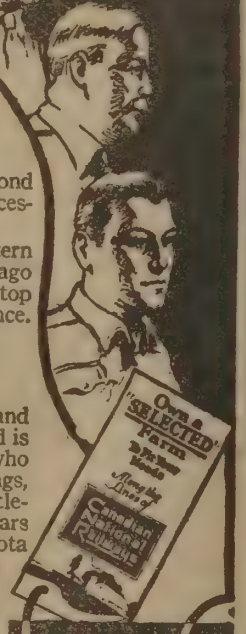
You can share success with them

This is a message to the man who knows the value of a second chance, who realizes that natural opportunities are as necessary as hard work.

In the success of others there is a lesson for you. Western Canada has thousands of successful men, who a few years ago were no better off than you may be today. But they did not stop at wishing. They investigated and found their second chance.

What other men have done in Western Canada

From Iowa a few years ago came a man with a few thousand dollars and a large family. Today he owns 1,280 acres, and is worth at least $50,000.00. Wisconsin sent another settler who located 160 acres. Today he owns 960 acres, stock, buildings, machinery, etc.—and has never had a crop failure. A gentleman from North Dakota started with a few hundred dollars—today he owns 480 rich acres. A settler from Minnesota started with little cash, and now owns 2,200 acres. Another of Canada's present-day successful men took up a homestead—and now owns 960 acres, all under cultivation. These are only a few cases. Others appear in the booklet. Investigation will reveal many more.



Canadian National Railways

This Railway will help you

This Department of the Canadian National Railways will help you select the kind of farm best suited to your needs. This service is absolutely free. Crop conditions are splendid. Wheat yields average high. Dairying and stock raising pay big. Taxes are low. The people speak your language, and the customs are the same. The finest land can be bought at $20 to $50 an acre. Terms are easy. A small first payment with equal payments at low interest on the balance over a term of years. This is only a very small part of the whole story. Learn why Canada wants you, and how you, too, will be helped. Send coupon for complete illustrated folder. Here is your chance to succeed. Take it up. Send now for the facts.

Blue Lace Flower

Clusters of delicate light blue blossoms, in size and color like the Forget-me-not, borne on long slender stems. Texture resembles Queen Anne Lace. Exquisite with cut flowers.

Chinese Wool Flower, flower clusters, massive feathery balls of brilliant crimson, blooming till frost.

Aster Novelty Hybrids, will produce many new types and colors never offered.

ALSO 2 FAMOUS VEGETABLES

Matchless Lettuce, remarkable for crispness and juicy texture. Grows somewhat like Romaine.

Sweet Corn, 60-day Makegood. Earliest of all, large, sweet and tender.

All Five Packets for 25c

All tested novelties and easy to grow. Send for big colorplate catalog **free.** Complete stocks of seeds, bulbs, window plants, perennials, fruits, berries and special novelties. Values exceptional.

John Lewis Childs, Inc., Floral Park, N.Y.

Color Your Butter

"Dandelion Butter Color" Gives That Golden June Shade and Costs Really Nothing. Read!

Before churning add one-half teaspoonful to each gallon of cream and out of your churn comes butter of Golden June shade to bring you top prices. "Dandelion Butter Color" costs nothing because each ounce used adds ounce of weight to butter. Large bottles cost only 35 cents at drug or grocery stores. Purely vegetable, harmless, meets all state and national food laws. Used for 50 years by all large creameries. Doesn't color buttermilk. Absolutely tasteless.

Pacific Trade

Two-Thirds of World on Rim of That Ocean

To the Editor of The Washington Farmer: I have your letter requesting opinion as to whether or not the agricultural development of the northwestern belt of states will be stimulated by the coming trade of the Pacific.

In reply I desire to state that I count myself very fortunate in having recently attended a conference of foreign trade development held in Tacoma. At that meeting I heard the veteran and pioneer of Pacific shipping. Captain Robert Dollar of San Francisco, make the statement that within the next 25 years the commerce of the world would be on the Pacific and he gave his reason for the statement that two-thirds of the population of the world lived on the rim of that ocean

There is every indication that the orient is waking up, in fact, has both eyes open and one foot out of bed. My prediction is, just as soon as she gets both feet out, then soap will be wanted, clothing needed and something to eat in order to sustain the body for the activities of the new day so near at hand.

We of the Pacific northwest are particularly fortunate in being the nearest at hand in point of transportation and ready to supply the thousand needs of the orient. Those demands coming to our shores can not help but radiate through every branch of industry. It is just as impossible to deny this fact as to stand near a red-hot stove and deny we receive any of its radiation. The closer we are in point of contact the greater will be the heat and correspondingly less as we withdraw from the center of radiation.

There is no line of product in the northwest that will not respond to the growing demands from the foreign trade of the Pacific. J. GRANT HINKLE,
Olympia, Wash. Secretary of State.

Wins Apple Medal

Apples from the state of Washington, exhibited at the December annual meeting of the American Pomological society at Toledo, Ohio, won the Wilder medal of that association for their superior excellence in competition with apples from the best fruit-growing districts of America. The exhibit consisted of 35 plates of one variety each, selected from the exhibits at the Pacific northwest fruit exposition at Seattle last fall. R. T. Reid of Bellevue and J. L. Dumas of Dayton, both members of the pomological society, made the selection. The counties from which the apples were selected included Benton, Chelan, Okanogan, Spokane, Walla Walla, Skamania and Yakima.

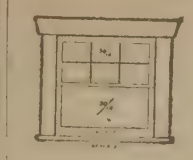
Professor O. M. Morris of the horticultural department of the state college, who, with Mr. Dumas and M. L. Dean of Wenatchee, is a life member of the pomological society, emphasizes the significance of the award of this medal in view of the fact that the society is the highest authority in the naming of varieties and their classifications as to quality.

Lime Is Essential

(Continued from page twelve.)

calcium in some way. An egg contains all of the 12 elements necessary to support animal life, so the egg must contain enough calcium, other than that found in the shell, to harden the bones of the chick which is to come out of the egg.

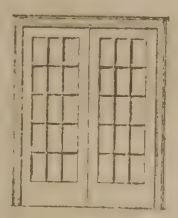
"Many farm folks think that because there is much gravel, sand and small stones in the chicken yards that is not necessary to supply lime in any form. But gravel and sand usually are flint, which contains no lime, and a hen could not make an eggshell if she were to eat a carload of flint. When she does eat flint it is for grinding her food.



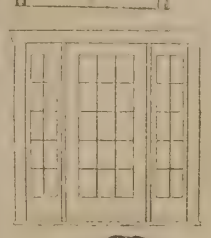
"Lime or calcium (we use these terms together because it is the calcium contained in lime we have reference to) may be obtained in different ways and in different forms. The order in which we find these sources of calcium so far as availability is concerned is as follows: First, oyster shell; second, clam shell; third, slaked lime made into mortar with sand, allowed to dry and then beaten up fine, and fourth, lime rock.

"Our recommendations, then, as to lime would be to keep a supply of it in some form available at all times, and to consider this essential part of the ration as carefully as you look after the kind and quantities of other food."

To Try Out Artichokes



An abundance of clover pasture and a good patch of rape, for later feeding, are about the best supplements for a small grain ration for growing pigs, according to J. W. Morris, a breeder of Berkshires at Ferndale, Whatcom county.



"In fact, young pigs can secure almost all of their living from such a pasture," he said, "for the first three or four months of their lives, after which time they should have a heavier grain ration.

GET OUR NEW MILLWORK CATALOG

(Issued January 2)

Buy Direct From Manufacturer---Save Money

We have just issued a new fifty-four page catalog on stock millwork which includes over thirty new designs of windows, in addition to our regular old line. You need this catalog if you are going to build.

Bungalow windows, French windows, cottage windows, chicken house sash, barn sash, panel doors, Craftsman doors, front doors, French doors, rear doors, cupboard doors, flour bins, drawers, breakfast nooks, medicine cabinet doors.

Our stock includes frames and inside finish for all.

This Millwork Can Be Used in Any Style House

Our designs are right up-to-date and can be used in any house with an 8-0, 8-6 or 9-0 ceiling.

Before cutting the openings for the windows or doors of your house, get our catalog. Our quality is very high and our prices are right, because we sell direct from forest to user in large or small quantity lots, as desired.

We sell direct to any one anywhere, and in dealing with us you are buying from a company with forty-eight years' reputation of doing what it says it will do.

ADVERTISING BRINGS PRODUCER IN TOUCH WITH THE CONSUMER

The following remarks are from a letter addressed to the New York Times by the head of a large manufacturing concern, and emphasizes some of the reasons why it pays to buy advertised goods:

"The consumer of any article always bears two distinct items of cost when he buys it. The first of these is the cost of production. The second is the cost of getting it from the producer to the consumer. Advertising has taken the large place that it has in the second of these two costs because it reduces the cost of distributing goods and therefore reduces the total cost to the consumer.

"Advertising frequently lessens the cost of goods very materially by providing a market, allowing production on a greatly magnified scale, thereby permitting economies which smaller production would not allow. A large enough market to make the dollar watch a possibility would not have been attainable except through advertising, yet this article has saved money to millions of those who have purchased."

In the advertising columns of this paper you will find many articles described which are noteworthy for their low price, high quality, and improved design. It is greatly to your interest to write the advertisers for additional information. When you do so, please mention the fact that you saw their advertising in The Washington Farmer.

Fertilizer Pays

Fertilizer applied to two test plots in Cowlitz county resulted in a gain to the farmer of over $20 per acre. Potash was placed on the land in one case, at the rate of 150 pounds per acre, which gave an increased yield over land having no potash, of 1.3 tons per acre. The fertilizer cost $10.35, while the potatoes are worth $30 per ton. Acid phosphate applied at the rate of 300 pounds per acre, costing $6, increased the yield 1.9 tons per acre, or gave a cash return over cost of $50 per acre. These demonstration plots were conducted by the county agent to determine the advisability of applying fertilizer to potatoes.

MORCROP

LILLY'S IT PAYS

Golden Winesap

A Wonderful Apple

It has the juicy tartness of the Jonathan, the meatiness of the old Winesap, the beauty of the Winter Banana, the deep gold color of the Grimes and the keeping qualities of the good old Ben Davis. Strong grower, healthy and vigorous. Originated in Utah and should be hardy everywhere. Bears young and very profusely.

True Delicious Apple

This is the ideal farm apple. Large fruit, beautiful dark red, quality unsurpassed. Flavor sweet, slightly touched with acid, comes out of storage in perfect condition.

Campbell's Early Grape

A new variety, vigorous growth, very hardy, very early and an abundant bearer. Good shipper; keeps for weeks after ripening.

Perfection Currant

In our entire experience this is the best bearer, the largest, sweetest and easiest to pick. Rich, mild flavor, less acid and few seeds.

Low Prices Direct to You (32)

The Value of Farm Manures

By LEONARD HEGNAUER.

The following table from Hopkins' "Soil Fertility and Permanent Agriculture" gives the composition of ordinary fresh manure, as well as that of some of the common crops and crop residues, which might be returned to the soil for the purpose of increasing the organic matter.

Pounds of Each Element in a Ton.

	Nitrogen.	Phosphorus.	Potassium.
Ordinary fresh manure (average)	10	2	8
Oat straw	12	2	21
Wheat straw	10	2	14
Clover hay	40	5	30
Alfalfa hay	50	4	24

If a ton of any of the above mentioned materials were returned to the soil, the number of pounds of fertilizer elements mentioned would be added to the plant food supply, together with the organic matter. The differences in value between the different substances would be largely determined by the difference in their chemical composition.

From the same source the following table shows the amount of plant food removed by some of the more common crops, during a season, assuming a definite yield per acre.

Crops.	Yield per Acre.	Nitrogen, Pounds.	Phosphorus, Pounds.	Potassium, Pounds.
Grain	50 bushels	71	12	13
Oats straw	2½ tons	31	5	52
Wheat straw	2½ tons	25	4	45
Potatoes	12 tons	84	17	120
Alfalfa	8 tons	400	36	192

The plant food here mentioned all must come from the supply in the soil, except in the case of alfalfa. The nitrogen will come from the air provided the plants were inoculated. The table further shows that no crop can be grown without a definite amount of raw material of a very definite kind being on hand and readily available. If sufficient amounts are not available the yield will be proportionately lowered.

If, for example, a 50-bushel wheat crop were taken from an acre of ground, the grain alone would remove 71 pounds of nitrogen, 12 pounds of phosphorus and 13 pounds of potassium. It is assumed here that all of the straw is returned and none of its fertility lost. To return the plant food removed by the wheat crop would require seven tons of ordinary manure to produce sufficient nitrogen to reimburse hte soil and make good the losses in that element. In the case of phosphorus and potassium a somewhat lighter application would supply the needs. This case is used merely to show how rapidly plant food is consumed and how necessary it is to return to the land all of the fertilizing materials which the farm produces. It further shows that on the average farm the amount of manure applied is not sufficient to make good the ferility withdrawn by crops and the farmer is drawing heavily on the reserve stock in the soil. Sooner or later these reserve stocks must be replenished.

BUTTERFAT PRICES DROP.

Butterfat prices dropped to 25 cents in the Twin Falls and Boise valley districts during the second week in January. This is the lowest price paid for butterfat in Idaho in January since before the World war began.

WHAT CHEMISTS CAN'T FIND.

A chemical analysis of roots, such as turnips and mangels, shows them to be comparatively low in food nutrients, but there is a food or tonic value in many things that chemists are unable to discover.

POULTRY—Baby Chicks (Continued) 174

"WHAT THEY SAY."—"YESTERLAID EGG Ranch, Kent, Wash. Dear Sir:—Is there any chance for 1200 chicks the 1st of April? Well pleased with your pullets last year. They laid between 50 per cent and 60 per cent since last October." Jack Sheridan, Greenacres, Wash. "Dear Sir: I bought 400 chicks of you last spring and will say they were the best layers I have. I would like to buy between 400 and 500 more next month. What time in February could I get them?" Mrs. Leonard Fossett, Dungeness, Wash. "Jan. 6th, 1922. Dear Sir: Enclosed find $7.50 as 15 per cent payment on 250 chicks. Our neighbor, Mr. Wood, got some from you last year and they certainly are good layers." William Stark, Coeur d'Alene, Idaho. We hatch 12,000 chicks every 5 days from our own wonderful trap nested White Leghorns. All of our 3000 laying hens are trap nested and bred to lay. We have 40 acres devoted exclusively to White Leghorns, all with wonderful egg records. More than 50,000 chicks already sold, but we still have good dates left if you book your orders at once. Send for price list and dates you would like chicks shipped. Yesterlaid Egg Ranch, Kent, Wash.

WHITE LEGHORN AND ILL-A-HEE BARRED Rock chicks—Buy chicks this year that live and grow and are bred to lay. Butler White Leghorns and Ill-a-hee Barred Rocks are known for high average flock production. Before ordering elsewhere, write for circular telling how our breeding methods produce 200 flocks for our customers. All stock trap nested and pedigreed. Also get our prices on breeding cockerels and hatching eggs for each breed. Address Butler Poultry Farms, or Ill-a-hee Poultry Farm, Jennigs Lodge, Ore.

CRYSTAL WHITE POULTRY FARM—BREEDers of S. C. White Leghorns; baby chicks a specialty; hatched from eggs laid by our great egg producers. Price, $17 per 100; $160 per 1000. Order early to get the best dates. Send for circulars. Mr. and Mrs. Jno. Eborall, McMinnville, Ore. Box 33.

FRESHLAID WHITE LEGHORN CHICKS have the qualities you want; vigor and scientific breeding for heaviest egg production; every Freshlaid male is from a high record hen. Our new catalog, "Success with Chicks," is free. Sold out until May 1st. Freshlaid Farm, Colfax, Wash.

WHITE LEGHORN COCKERELS, $3; CHOICE, $5; baby chicks, 18c; utility stock. My pullets carried first prize Sherwood and first pullet, Portland stock show. Mammoth Pekin duck eggs, $2 for eleven; ducklings, 40c each. G. H. Lewis, Route 3, Sherwood, Ore.

WHITE LEGHORN BABY CHICKS FROM heaviest laying stock. Booking orders now for spring, 1922, delivery. Safe arrival live, vigorous chicks guaranteed. Prices on request. Reliable since 1898. Must Hatch Incubator Co., 445 Seventh st., Petaluma, Cal.

FARMERS' WANT ADS

This is the farmers' "want," "sale" and "exchange" department for small advertisements of farmers, including live stock and poultry.

Advertising rates for ads running 1 to 3 times, 10c per word per insertion, with a special rate to Farmer subscribers, as follows: Ads running 4 to 12 times, 9c per word per insertion; ads running 13 times or more, 8c per word per insertion.

All commercial and land advertising 10 cents per word each insertion. Open also to nonsubscribers.

In using these columns advertisers must observe: (1) No advertisements will be inserted for less than $1.00. (2) Every word, number and initial, including name and address, must be paid for. (3) New advertisements, changes of copy or cancellations must reach general office, Spokane, Wash., 10 days in advance of publication date. (4) Cash must accompany order.

Above rates include insertion in The Washington Farmer, The Idaho Farmer and The Oregon Farmer, which constitute the Pacific Northwest Farm Trio, 46 Review Building, Spokane, Wash.

TRACK'S END

By HAYDEN CARRUTH

A Stirring Story of Adventure

(Copyright by Harper & Bros.)

CHAPTER XII.

One of my Letters to my Mother, in which I tell of many Things and especially of a Mystery which greatly puzzles and alarms me.

Here I am going to put in the letter which I wrote to my mother a week from the next day after my strange Christmas, to show that I did write her long letters every Sunday, as I have said; though of course it was many weeks before she got this or the others:

Track's End, Sunday, January 2d.

My Dear Father and Mother—I have written you so much bad news since I have been in this dreadful place that I am very glad to send you some good news at last, and that is that my ankle, of which I wrote you last Sunday, is all well. I kept up the hot water applications and by the next morning it was so much better that I could walk on it. I hope I may not turn it again.

I don't know as there is much other good news to write, except that it is good news, and may be quite strange news, that I am still alive at all in such a place. I am getting along better with the cooking, though I am beginning to long for some fresh meat. The cow still gives a good mess of milk, and I now get three or four fresh eggs a day; thanks to the warm food which I give the hens, I guess. I do not believe that Crazy Jane has laid an egg since her night on the chimney, and I'm almost afraid she caught cold, as she has not had a genuine fight with another hen since. Kaiser and the cat and Dick and Ned are all well and in good appetite. I have heard rather less of the wolves of late, and I still think it would be easier to get the man in the moon to come to this town than any of those Indians. But the outlaws I still fear very much. Oh, something I ought to have written you last week! I mean this: I got a letter from them that day out at Mountain's, but I had no time to read it Christmas and the next day I forgot I had it till after I had put your letter in the postoffice. This is what was in it:

CITISENS TRACK'S END,—We will Rob your bank and burn your town if we don't get the small some we ask for. If adoing it we kill anyboddy it wun't be our fawlt. Leave the Munny as we told you to and save Bludd Shedd.

PIKE AND FRENDS.

I look for them any time. My only hope is that the weather will be too bad for them to travel; but of course there must be some good weather. The snow is already so deep that it will be very hard for them to do much on horseback. The street is full, and it is very deep north, east and south. The ground is almost bare for half a mile to the west, however; and they could come in on the grade. Of course, they can come on snow shoes at any time and go everywhere. I can not even hope to keep out of having trouble with them. I have made no answer to this letter, and can't make up my mind whether it would be best to do so or not.

I kept up work all the week on the fortifications, when the weather would permit; for there has been another great blizzard, the worst of the winter so far. I even worked all day yesterday, though it was New Year's. Monday morning I again started all of my fires, but I found that in three of the buildings there was not enough coal to last long. So I hitched up Ned and Dick on an old sleigh of Sours's and took a good lot to each place from the sheds at the railroad. It was a lucky thing I did so, too, because it snowed more Tuesday night and began to blizzard Wednesday and kept it up till Friday without once stopping; and it would now be impossible to drive anywhere near the coalsheds.

I have got up a plan to do what I want to do without using much coal; I smother the fires, all except the one in the hotel, with stove griddles laid on them, and it makes a great smoke without much fire. The guns and ammunition I have disposed of here and there, in good places for me in case of attack, but hard to find for other folks. One I keep standing by my bed's head, but nobody would be apt to look there for either gun or bed, I hope. I take in my drawbridge always the minute I cross.

The last blizzard has helped me a good deal. The street is now so full that the first-story doors and windows of the hotel and bank and most of the other buildings are covered. Not a bit of daylight gets into the hotel office, and I am writing this by lamplight, though the sun is bright outdoors. The hotel can now only be entered by the back door, which I have strengthened with boards and braces. I have also boarded up the second-story windows, as they are now not much above the level of the drifts.

My tunnel might now be much higher and I am going to make it so that I can stand up straight all the way through. This is the only way there is to get into the bank now, unless you were to pound off the planks I have nailed over the upper windows or shovel the snow away below. I drew over lumber from the yard the day I had the team hitched up for the coal. There are plenty of nails at Taggart's. The blacksmith tools which would be good to break open a safe with I have buried in the snow. I have not yet carried out the plan I told you about which might save me in case the town is burned. It is a big job, but I am going at it as soon as I can. There is much other work which I want to do. There is a large tin keg of blasting powder at Taggart's which it seems as if I ought to use somehow. Sometimes I wish I had a cannon, but I don't know as it would be much use to me.

I had a vast deal of work Monday and Tuesday carrying back the things those savage Indians lugged out in the square. I fastened up all of the buildings which they had torn open and straightened up things in the store as best I could. Fitzsimmons' was in the worst confusion, and I could not do much with it. The cellar was such a wreck of barrels and boxes and crates and everything you can think of, all broken open and the things thrown everywhere, that I only looked down and gave it up then and there.

As soon as I can get around to it I mean to build some more tunnels to some of the other houses. I think I ought to draw up a list of regular hours for getting up, fixing the fires, climbing the windmill tower to look with the fieldglass, and such-like things, as I used to hear Uncle Ben tell was the way they did when he was in the army. I mean to go out every good day and take some target practice with my rifle.

I wish I could close this letter here, and I would do so if it were going to you so that you would get it before you get others, or before you know that you are never to get others from me, if that is to be, as I fear it may. Oh, if I only had it to do over again, how quick I would take the chance to go away from this horrid place! If I live to get away I will never come here again. So I must tell you what little I can of this other matter.

I am not here in Track's End alone. What it is that is here I do not know. How long it has been here I do not know. Where it stays, what it does, where it goes, I do not know. I have looked over my shoulder 20 times from nervousness since I began this letter.

Last Monday night I hung a piece of bacon on a rafter in the shed back of the kitchen, after cutting off a slice for breakfast the next morning. I kept it there because it is a cool place and handy to the kitchen. Tuesday morning it was gone. I had left the outside door shut, and it was still shut in the morning. The door between the kitchen and shed was locked. I could see no tracks or marks of any kind.

Wednesday morning the thumb-piece of the latch on the depot door was pressed down. I don't think I left it that way. A pail by the back door in which I had thrown some scraps which I was saving for the chickens was tipped over. I think some of the meat rinds were gone. The blizzard began that morning.

Thursday morning the blizzard was still going on. I noticed nothing unusual.

Friday morning a quilt and a blanket had been stolen from a bed in the hotel. Another quilt was drawn from the bed and lay on the floor. I think the window (it had not yet been boarded up) at the foot of the bed had been raised. The snowbank outside is high. The blizzard was still blowing.

Yesterday morning I saw nothing wrong, but I thought about it a good deal during the day. I remembered of hearing strange sounds at night from the first of my being here alone. I had thought it wolves, owls, jackrabbits, or something like that.

Last night I decided to watch. The storm had stopped and the night was very still, but it was cloudy and dark and a flake of snow fell once in a while. I put on the big fur coat and sat on a box just outside the woodshed door, which was open on a crack. At about 11 o'clock I heard a faint noise at the barn as if something were in the yard at the side trying to get in at one of the windows. I swung my door open a little more, it creaked and I saw something dark go across the yard and over the fence. There was no sound that I could hear. I could not see that it touched the ground. It went behind a haystack by the fence. There was instantly another glimpse of it as it passed beyond the stack, going either behind or through the shed under which the men stood that night when Pike shot Allenham. I was not sure if I saw it the other side of there or not, but I could not see so well beyond the shed. The motion was gliding; I heard no footstep, nor sound of wings, nor anything. It snowed some more in the night. This morning I could find nothing wrong exept that a clothesline beyond the shed was broken. It had hung across the way which what I saw must have gone. Its ends were tied to posts at least seven feet from the ground, and if I remember aright, it has all the time been drawn up so that it did not sag at all. It was snapped off as if something had run against it.

I must close now and do up my work for the night. I only ask that I may live to see you all again. If I do not, then may this reach you somehow.

Your dutiful son,

JUDSON PITCHER.

CHAPTER XIII.

Some talk at breakfast, and various other family affairs: with notes on the weather, and a sight of something to the northwest.

It was on the morning of Tuesday, January 25, as I sat at breakfast with Pawsy in her chair at one end and with Kaiser at the other, drumming on the floor for another bit of bacon, that I said to myself:

"It is just one month today since I clapped eyes on a human being, and the ones I saw then were not very good humans, being thieving and drunken Indians." And when I said this I had not forgotten (when had it been once out of my mind, waking or sleeping?) what I saw on New Year's night, but I knew not if I were to count that as human or what.

I remember that Sunday night after I finished the letter to my mother which I put in the last chapter, how I found it darker than I expected when I went out, and how I ran along the snowbanks with my heart thumping like to split, and threw the letter in the top of the postoffice door (the rightful opening was long before buried under the snow) and then shot back to the hotel, not daring to look behind me or even stop to breathe. I was well ashamed of myself, at the time, but I could not help it.

On that night it was even 9 o'clock before I could get up courage to go to the barn and feed the stock. I think I was in a greater state of horror than on the night after the battle with the wolves. I walked the floor, back and forth, on tiptoe and listened, and the less there was to hear, the more I heard. At last I, after a fashion, put down my fright, and ventured out to the barn, but even then I could not whistle; I tried, but my lips would not stay puckered.

I went to bed as soon as I could, and though I thought I should never get to sleep, I did at last. What my dreams were, or how many times I sat up in bed

I saw that they were Indians.

with a start, are things I do not like to think about. But notwithstanding this, I felt better in the morning and went at the work as hard as I could.

But though, as I say, up to the 25th of January (and even beyond) I had no further glimpse of the mysterious visitor, I saw evidence of its presence often enough.

Night after night the scrap pail by the back door was rummaged and something taken from it, and once a chicken was missing from the barn. The only way that anything could get in was through a window into the hayloft, seven or eight feet above the drift. After I missed the chicken I nailed this up and lost no more. I thought there were a few stretches on the side of the barn below the window, but I could tell nothing from them. Almost every night it either snowed or drifted, or both, so there was almost no hope of ever finding tracks of any kind on the ground. One morning I found the windmill at the station thrown into gear and running full tilt, but the lever which controlled it may have slipped. Two or three times I thought I heard the windlass of the well near the barn creak, but I tried to make myself believe that it was only the wind.

You may be sure that my sleep was very light, and I often heard Kaiser growling and barking late at night in the hotel. I never had the courage to sit up and watch again. I may have been more cowardly than I should have been; I leave that to the reader to say. One night I lay awake listening to the wolves howling up at the north end of the town. Suddenly their cry changed and they swept the whole length of the street like the wind, and much faster than they usually went when simply ranging for prey. They may have been chasing a jackrabbit.

Another night they howled so long right in front of the building I was in that I put down my foolish fears and got up and fired at them, hoping to scare them away and maybe get another skin for my coat. One fell, and the others made off at a great rate. I watched the one on the snow till I was sure he was dead, and I heard nothing more of the others that night. In the morning there was neither hide nor hair of the dead wolf.

But the work I had to do kept my mind off of my terror a good deal, and saved me, I really believe, from going stark mad. I will tell about my great system of tunnels presently, but before I began it I did much else. One of the first things was to make a long, light sled for Kaiser to draw, and also a harness for him. The materials and tools for the one I got from the wagon repair shop attached to Beckwith's blacksmith shop, and the same for the other from the harness shop, where I kept up one of my fires. I was always handy with all kinds of tools, inheriting a love for them from my father; besides, I had worked with him in the shop at home a good deal, and had thus become a fairly good mechanic for my age. I could handle a plane or a drawshave or a riveting hammer, or even an awl, for the matter of that, with any of them.

I used this dog rig chiefly for taking over ground feed from the depot to the barn for the horses and cow, but Kaiser learned to enjoy the work of dragging the sled so much that I soon came to use him nearly always in good weather in making my rounds to look after the fires or patrol the town. He would whisk me along on top of the frozen drifts at such a rate that it would nearly take my breath away sometimes. I practiced with the skis till there was no danger of turning my ankle again, and would sometimes run races with him on them, but he could beat me all hollow unless there was a good, stiff load on the sled.

Another thing that I made was a pair of leather spectacles, something which my mother had used often to tell me I needed when I was small and could not see something that was plain as a pikestaff. My spectacles were made out of a strip of black leather two inches wide, which went over my eyes and around my head, with two slits through which I could look. These I wore on the dazzling bright days and was troubled no more by snow-blindness, which had made my eyes so painful the day I came back from Mountain's.

It was about New Year's that I began to spend my evenings in noting down in the hotel register what had happened during the day. I did this chiefly so that when I came to write to my mother Sunday I would forget nothing, and I am very glad now that I did so, for without the register and the letters (both of which I now have) about some things, especially dates, I might go wrong in writing this account. Besides, in the past, it has been much satisfaction when I have related any of the incidents of my winter at Track's End and some person, to show how smart he was, has tried to cast doubt on my word—it has been much comfort to me, I say, in such cases to have the register and letters to show him, with it all set down in black and white.

Thus it comes I know that Pawsy caught a mouse in the barn on Wednesday, January 12, at about 7:30 in the morning, while I was milking the cow. I think it was the only mouse at Track's End that winter, for I never saw or heard any other. There were no rats in the territory then anywhere, unless it may have been at Yankton, or at some of the old Red River settlements about Pembina.

Pawsy was a good hunter, and several times caught a snowbird, though I boxed her ears for this, and on Friday, the 21st, I found her near Joyce's store trying to drag home a jackrabbit. She must have caught it by lying in wait, but I marveled how she killed the monstrous creature. But she was, indeed, one of the largest and strongest cats I ever knew. I would have trusted her to whip a coyote in a fair fight. I got three jacks in January myself with the rifle, and found them very good to eat, but the first one, after skinning it, I left overnight in the shed, and in the morning it was gone. That day I went to Taggart's and got two good bolts and put them on the shed door.

Getting my meals I found very hard

work, but I made out better than you might think, since my mother had taught me something about cooking. At first I neglected regular meals, snatching a bite of anything that I could lay my hands on, but I soon saw that this would not do if I were to keep in good health and strength. My boarders, too, were great hands to complain if they did not get their meals regularly. You might have thought that cat and dog were paying good money for their board, the way they would mew and whine if a meal were late. I took very good care of the chickens, giving them plenty of warm food, so from about Christmas I got a dozen or more eggs each week. The cow, too, I fed well on ground feed and hay, with pumpkins and sometimes a few potatoes, and she gave me a fair quantity of milk all winter, and on the eggs and milk, together with potatoes, bacon and salt codfish, I and my boarders managed to live tolerably well.

Pie I missed very much, and cookies and apple dumplings and such things, all of which my mother used to make very freely at home, and never keeping them hid. I looked longingly at the pumpkins, and once fetched a quantity of ginger from Joyce's, vowing I would attempt a pumpkin pie, but I never got up my courage. Bread, also, I never attempted, though I got a package of yeast from the store and looked at it many times. The place of this was taken by pancakes, which I made almost every day, big and thick, which with molasses went very well; though a good cook, as like as not, would have said they were somewhat leathery.

There was not an apple in town, nor any kind of fresh fruit, but there were dried apples and prunes, and canned fruit and vegetables, especially tomatoes. Of the canned things I liked the strawberries best, and ate many, though they tasted somewhat of the tin. There were plenty of crackers in the stores, and some dry round things, dark-colored, which called themselves gingersnaps; I took home a large package in great glee, thinking I had made a find; I ate one of them by main strength and gave the rest to the cow. Butter I made several times, with fair success, though it was not like mother's, being more greasy.

Fresh meat I missed very much, though the few jackrabbits I got helped out, and were good eating, as I have said, and smelled as good as anything could while cooking. Some other fresh meat I had also, as you shall see directly. Once I made up my mind to have some chicken. There was one hen who was very fat and never, I was sure, laid an egg. I took the hatchet, which was sharp enough, and went to the barn, intending to behead her, having it all planned how I should cook her for my Sunday dinner. When I got to the barn the hen seemed to know what I intended, and she looked at me with one eye, very reproachful, and I went back to the house with my hatchet and never made any more plans for chicken dinners.

There was much bad weather in January. Often I noticed that this was the way of it: It would snow for one day, blizzard for three, and then for two be still, steady, bitter cold. On these latter the thermometer would often go over 40 degrees below zero, with the sun shining bright and the sky blue, but with a frightful big yellow-and-orange sun-dog each side of the sun, morning and evening, like two great columns, and sometimes there would be a big orange circle around the sun all day, with much frost in the air.

Some of the nights were light, almost, as day, with the northern lights flaming up from behind Frenchman's Butte all over the whole sky, and all colors and shapes. On these nights the horses (they had been wild ponies once) would stamp about in the barn, and Kaiser would growl in his sleep. When I rubbed the cat's back it would crack and sparkle. The wolves seemed to howl more and differently on these nights, and once I went to the station, thinking the fire there needed fixing, and I heard the telegraph instrument clicking fit to tear itself to pieces. Often the next day after the northern lights would come the storm.

It was on the very day that I had said to Kaiser and Pawsy at breakfast (that is, January 25) that it was a month since I had seen any human being, that I was at the depot after a load of ground feed, and in looking to the northwest thought I saw something moving. It did not take me long to go up the windmill tower. It was not past 10 o'clock in the forenoon, so the light for looking toward the northwest was good, though, of course, as the sun was shining, the snow was pretty dazzling. But I could still only make out that something was moving south or southwest. It was impossible to tell if it were men or horses or cattle. So I went down as fast as I could, jumped onto the sled, and the next minute Kaiser had me at the hotel, where I got the fieldglass and went back.

Up the tower I scrambled for another look. The snow was so dazzling that the glass did less good than you might suppose, but with it I could soon tell that it was a party of men on horseback following either another party or a drove of cattle or horses. The band ahead swung gradually about and came toward Track's End. The ones behind seemed to be trying to cut them off, but they failed to do it. On they came, and in 10 minutes I could see that it was either cattle or horses that were being chased by 20 or 25 men on horseback. The cattle were following a low, broad ridge where the snow was less deep, and which spread out west of the town, making less snow there also, as I have mentioned before. I thought there was something peculiar about the ridig of the men; I watched closely, and then I saw they were Indians.

My first thought was that it was daylight and no jacklantern would scare them away. I saw I must depend on harsher measures. In almost no time I had got over town, locked the barn, shut Kaiser in the hotel, run through my tunnel to the bank, so as to be on the west side of town, and stood peeping out a loophole with two fully loaded Winchesters on a table beside me.

(To be continued.)

Works Out Her Own Problems

Helen Brown, a Spokane county girl, is working out a poultry project all of her own, according to W. D. Buchanan, poultry extension specialist, who tells of her plan.

"Helen is not only attending to a large part of the details of the work herself, but she is drawing up her house plans in such a way that they will allow for expansion as more room is needed. When I looked over her papers I asked her why she didn't spread the buildings over more ground and not have them so crowded. She studied for a minute and then told me she had been given an acre of ground on which to build her henhouses and if she built any of them on the land adjoining she would have to pay interest on two acres. It appears to me that she was carrying her estimates on a true business basis."

Worth-While Work

To the Editor of The Washington Farmer: Our Worthy Sister Ceres Mrs. Lena Strong, during the war organized a boys and girls' club, and the grange contributed prizes. This included, besides the Washougal school, the surrounding districts, and entailed a great deal of hard work on the leader.

Our grange women are living in the country surrounding Washougal from different sides, consequently work along social and neighborly lines is more restricted than could be the case in an outside community. Our grange took the lead of all the fraternities in buying Liberty bonds, stamps and doing all kinds of hard work in those strenuous times.

MRS. ISABEL ERNI,
Secretary Washougal Grange.
Washougal, Wash.

We have to plow the back forty each year. Each morning and evening we have to go out to fill the milk pail anew. Same way with our Cooperative Subscription Plan; it yielded our readers a big harvest of savings last year; but to do the same this year it must continue to have your attention and help.

We say to our readers: "Send your subscription orders direct. Get your neighbors to do the same. We will give you and your neighbor the benefit of every penny which would ordinarily go to the agent handling the subscription."

We have every confidence that you will once more put your shoulder to the wheel and repeat our request that you take thought as to your subscription renewal. Instead of waiting for a notification, mail in your order at least 60 days in advance of the address label of your paper. Tell your friends and neighbors about our cooperative plan and include their orders with your own. By all pulling together we can and will make 1922 a big year for cooperation. Let's do it!

Subscription Rates of The Washington Farmer:

$1.00 for Five Years

25 Cents for 1 Year.
50 Cents for 3 Years.
In Canada add 1 cent a copy for extra postage.

Feb. 2, 1922.

THE WASHINGTON FARMER,
Review Building, Spokane, Wash.

I desire to take advantage of your Cooperative Plan in securing new and renewal subscriptions.

I enclose herewith $..... for a ..... year subscription to

THE WASHINGTON FARMER.

ALICE BARLAND
EDITORIAL CONTRIBUTOR

OUT IN THE FIELDS WITH GOD.

The little cares that fretted me,
I lost them yesterday,
Among the fields, above the sea,
Among the winds at play;
Among the lowing of the herds,
The rustling of the trees,
Among the singing of the birds,
The humming of the bees.

The foolish fears of what may hap,
I cast them all away
Among the clover-scented grass,
Among the new-mown hay;
Among the rustling of the corn,
Where drowsy poppies nod,
Where ill thoughts die and good are born,
Out in the fields with God.

—Elizabeth Barrett Browning.

Dear Mrs. Barland: We have been farming for several years and I have enjoyed the weekly visits of THE FARMER and, though we have taken other papers, we find this one the most complete.

We left off ranching this fall because we couldn't get the price of production for our produce. It is nice of the government to arrange loans for the farmers, but credit only prolongs the misery. What the farmers need is the full price of production plus living expenses, then they won't need to borrow. Farmers are independent and will not submit to dictation from people who know it all according to theory, but who have no knowledge whatever of farming from experience. So we are taking a vacation until such time as we shall be convinced that the producer is no longer the "goat."

We are not alone, either; many are quitting their farms because conditions are becoming unbearable financially. We love farm life and hope to go back to it when prospects become brighter.

I noticed a request for a recipe for cream puffs and I am sending one I can recommend:

Put into a sauce pan one-half cup of butter and one-half cup of hot water; when it begins to boil stir in one cup of flour, stirring constantly till smooth, remove from the fire and when almost cold add three eggs, a little at a time, and beat thoroughly; add one teaspoon of salt and one-half teaspoon of soda. Drop on a buttered pan about one inch apart; pull out into shape and bake about 25 minutes in a quick oven with the most heat on the bottom. When quite cold cut and fill with whipped cream or mock cream.

Recipe for mock cream: Beat the whites of two eggs to a stiff froth; into this stir three-fourths cup of fine pulverized sugar, melt one-half cup of butter and add to the above, whip thoroughly and flavor to taste. Excellent for cream cake.

Spokane, Wash. MRS. W. H. YEO.

To remove mildew: Mix a small quantity of soft soap with same proportion of powdered starch and salt and the juice of a lemon. Apply the mixture to both sides of the stain with a small brush and if possible let the article lie on the grass all day and night or until the stain quite disappears, then wash in the usual way.

MRS. F. L. K.

Dear Mrs. Barland: Will some one please send directions for curing bacon the commercial way, without having to use the liquid smoke? We have been curing it in the common way, with salt, then smoking it, but it doesn't taste like the commercial kind.

If it is not asking too much, will some one send in recipe for carrot salad?

It seems as if most everything about children's lunches has been suggested, but most all children like sauce for lunch and it prevents the juicy kind from spilling if thickened slightly with gelatin.

Ribbon cake is quickly made and often when I am making a plain white cake I keep out about one-half the batter and after putting the other half in the pan I drop a very small drop of red coloring here and there on the batter and then pour on the rest of the batter. When the cake is done the children say the spots look like strawberries. MRS. F. H.

Garibaldi, Ore.

Dear Mrs. Barland: May I join in your homey chats? I turn first to the Circle when the paper comes and find many helpful suggestions.

I never did much housework up to a year ago; my mother was hurt at that time and I had to take it all over, and I had my hands full for a while, but I have learned a good deal in the time I have been at it. I will offer a few of my labor-saving devices.

I cover box ends with oilcloth and use them under the dishpan and for pads for kettles; they are easier to clean than the oilcloth on the table and shelves and save wear on it, too.

I covered a board three inches wide and six inches long with glue and scattered sand over it and tacked it under the match box and it saves the wall where men are bound to scratch matches. (Why not buy a sheet of sand paper for 5 cents and use it instead, and save your time?—Editor.)

Will some one send me a good recipe for an old-fashioned pumpkin pie? Here is mine for carrot pie and it is good.

Carrot pie: Boil four or five good-sized carrots till tender, then run them through a colander, add two well-beaten eggs, one cup of milk, a cup of sugar, vanilla to taste and a pinch of salt. Line the pan with a crust made as follows: Two cups of flour and one cup of lard, a little salt, one-half teaspoon of baking powder, put together with a fork and moisten with cold water. ISABELLE FRISBIE.

Dear Mrs. Barland: I would like to answer a few of the questions on child training. I have three fine lively boys and am convinced the time to begin to train children is when you begin to feed them; in other words, at once.

I have a baby boy 10 months old. He uses his nursery chair, understands perfectly "no, no," "don't touch," etc. My bookcases are open and everything usually about the house within his reach, but he never molests anything.

My children never "talk back"; some one else answer that.

I put up hooks for each child and within reach and by gentle suggestion that coats, caps and sweaters be hung up and by setting the example myself they very readily hang up their things. I have placed a mirror low enough for them near the wash-bowl, where they can see themselves; each child has his own comb, brush and toothbrush and they keep them in order and think it great sport to keep clean and shiny.

As for table manners, they must be trained from their first meal in their high chairs. Adults must be careful, as children are great imitators.

I have had no experience with tattling, but have taught that it isn't honorable.

Make their work interesting; do not nag, encourage them. Don't be afraid to praise their little efforts to help. Very often my two older boys come in from their play and ask: "Is there something I can do for you, mother?"

I have a set of very helpful child-training books, which are very general and cover about every point, and I have worked out many good ideas from them. If any one cares to write to me I shall be glad to answer.

I do not mean to convey the idea that my children are perfect, but they are well-mannered, clean and polite.

Bickleton, Wash. MRS. DELVIN COX.

Your Health

By Royal S. Copeland, M. D., F. A. C. S.

HOW TO WOO SLEEP.

Why don't you sleep better? Aren't you tired of staying awake half the night, getting up more exhausted than when you went to bed?

Dr. Copeland.

The poet speaks about "morning faces," but half the world gets up with gloom of countenance and brittleness of temper.

This is all wrong. Each of us should begin the day with a heart full of song.

There is something wrong if morning doesn't find you eager for the day's work.

By the way, I don't like the word "work," used to describe our ordinary regular daily activity. Why should the duty we have chosen be called "work"?

The hours a child is in school are spoken of as "work hours," and the recess period is called "playtime."

With persons who are keenly interested in business, it requires more downright effort and work to play than it does to do the things usually described as "work." When our daily activities are properly divided and rightly balanced, it will make no difference what word is used to describe any given part of the day's program—no part of our day will be given to work, but all we do will be play.

When your work is really work—when it becomes a hardship to do the thing it is your duty to do—when you fret and fume over your tasks, you will find your sleep disturbed. When life becomes a daily grind—when you hate your work and rail about it—then your nerves get on edge, your appetite suffers, your digestion is impaired, and your downy pillow turns to stone.

When I hear about sleepless nights I inquire at once about the days. If you are happy, busy, usefully engaged, and reasonably attentive to the rules of hygiene, you should sleep the sleep of the just, and get up from your bed refreshed and cheerful.

I have emphasized the mental and nervous aspects of sleeplessness. It goes without saying that there are physical reasons for this unhappy condition.

Aches and pains of every description are responsible for restless nights. A headache, burning and smarting of the eyes, toothache, sore throat, persistent cough, pain in the chest or side, stomachache, lumbago, sciatica, neuralgia of any description, indigestion, aching limbs or joints, rheumatism and a multitude of other ailments may keep you awake.

If you are sleepless, instead of courting sleep by saying the multiplication table or counting innumerable sheep over imaginary fences, spend those wakeful moments figuring out why you can not sleep. Review your manner of living, your habits and the way in which your life is ordered.

You don't need a doctor. You need the exercise of common sense.

Self-study will determine the cause of your sleeplessness.

Self-interest should give you strength to remove the cause.

Milk Drinks

"Milk Drinks for Everybody" should be our slogan, says a recent bulletin issued by the Wisconsin College of Agriculture. Make them at home or order them at the fountain. Milk drinks can be made in a minute out of fresh whole milk, powdered whole milk or condensed milk. Many children refuse to drink plain milk, but will thoroughly enjoy the sweetened, flavored milk drink.

Flavors of many varieties are used. Ordinary household flavoring extracts, soda fountain syrups, juices from fresh or canned fruit or home-made syrups may be used.

Put a few drops of any good flavoring extract in a glass. (A few trials will show exactly how much to use.) Add two teaspoonfuls of sugar. Fill the glass with cold milk. Add a little ice if you have it. The colder the drink, the better you will like it.

A little nutmeg or cinnamon sprinkled over the top of any of these drinks makes them even more appetizing. A dash of whipped cream with a cherry or a few nuts on top is a delicious addition.

Housewife Needs Tool Kit

By JEANNETTE CRAMER, Corvallis, Ore.

The housewife's tool kit, one of the best time and disposition savers, should have its place in every home and be kept in its place, believes Miss Emma S. Weld, instructor in household administration at Oregon Agricultural college.

A tool box containing the ordinary tools, kept in the kitchen and used when the need arises to replace a hook, cut a wire or put in a nail, saves more time in the course of the week than almost any other housesold convenience," says Miss Weld.

"Other members of the family must be given to understand that this box belongs to the homemaker and that the tools it contains must be used with her permission and returned promptly or not borrowed at all.

"The exact contents of the tool kit will be determined by the home where they are used. The principal requirement is that they should always be there when needed."

A list suggested by Miss Weld includes: Hammer, pliers, scissors, jacknife, mending tape, tape line, screws, tacks, wrench, putty, string, glue, paste, oil can, hooks, screw eyes, labels, thumb tacks, wire.

Just Folks

Ease deadens.

Just so far as you make life easy in that proportion you make life worthless.

If money making comes easy to you, then money making is bad for you.

If you can quiet restlessness by reading books and more books, then you might just as well, first as last, bury yourself under a library.

If you can quiet your conscience by becoming a professional reformer, then you have already taken the high road to a reformatory yourself.

If buying land and more land gives you security of case, then you no longer live in the house by the road.

Human life is one great continuing procession. He who would escape the foreordained march by going into some blind alley of ease will sooner or later have to be carried along by the rest as so much dead weight.

It is better to take your medicine, do your part, and believe as best you may, that life is not merely a program.

Why Don't YOU Share in these Big Savings?

Our FREE Catalog Saves Millions for Our Customers!

Isn't it vitally important—this season, more than ever before—to save every penny you can? Send TODAY—THIS VERY MINUTE—for Philipsborn's 312-page Style Book for Spring and Summer, with its 2,000 Challenge Bargains, and *get your share of the big savings.*

We have only printed 3,000,000 copies. This we fear is at least 2,000,000 short of the demand. Copies of the Style Book are supplied—FREE OF CHARGE—as long as they last. Requests are even now coming in at a rate unparalleled in our 32 years' history.

The only way to make SURE of your copy of the Style Book is to send the Coupon or a Postal today.

Styles Have Changed for Spring

Women everywhere are on the tiptoe of expectation because of the *sweeping changes in styles* which are revealed for the *first time* in PHILIPSBORN'S Spring and Summer Style Book. Every style sparkles with newness and beauty!

2,000 Challenge Bargains!!

You will be *intensely interested* in the 2,000 *Challenge Bargains* which PHILIPSBORN'S *defy* any other house in America to equal. Bargains in stylish, dependable wearing apparel for every member of the family. We *guarantee* our prices to be the lowest in the U. S. A. Everything shipped *prepaid.*

Bits of Fun for Everyone

Dentist Kept the Evidence.

The other day Theodore, 5 years old, had to visit the dentist, and when he came back his father said:

"Well, old chap; how's the toothache now?"

"Dunno," was the reply.

"But you must know whether the ache's gone."

"Dunno," was the matter of fact answer. "The dentist kept the tooth."

Very Good Singer.

He—"What is that loud noise?"

She—"Oh, that's my sister Mary cultivating her voice."

He—"Cultivating? That isn't cultivating! That's harrowing."

Accurate Measurement.

A two-foot rule was given to a laborer in a Clyde boatyard to measure an iron plate. The laborer not being well up in the use of the rule, after spending considerable time returned.

"Now, Mick," said the plater, "what size is the plate?"

"Well," replied Mick, with a grin of satisfaction; "it's the length of your rule and two thumbs over, with this piece of brick and the breadth of my hand and my arm from here to there, bar a finger."

Rather Fight It Out.

Magistrate—Can't this case be settled out of court?

Mulligan—Sure, sure; that's what we were trying to do, your honor, when the police interfered.—United Presbyterian.

And Win, Too.

Credit man—"I don't doubt that you have a thrifty, helpful wife, but it's money that talks."

Delinquent patron—"Money talks, huh? I'll back my wife against a million dollars."

Latest High Class Patterns for the Home

Please order the patterns you desire at least two or three weeks before you wish to use them. Desiring to obtain the latest high-class patterns for its readers, THE FARMER has made arrangements to have them sent direct from the east, and under present mailing conditions it takes about that time for them to reach you.

3322-3569. Ladies' costume. The waist, 3322, is cut in six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. The skirt, 3569, is cut in six sizes: 24, 26, 28, 30, 32 and 34 inches waist measure. The width of the skirt at the foot is 2 1-4 yards. To make the dress for a 38-inch size will require 7 1-2 yards of 27-inch material. Two separate patterns, 10 cents for each pattern.

3856. Girl's dress. Cut in four sizes: 6, 8, 10 and 12 years. A 10-year size requires 3 1-2 yards of 32-inch material. Price 10 cents.

3498. An attractive gown. Cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. A 38-inch size will require 3 7-8 yards of 40-inch material for the dress, and 2 1-4 yards of 27-inch material for the guimpe. The width of the skirt at the foot is about two yards. Price 10 cents.

3482. A smart dress. Cut in three sizes: 16, 18 and 20 years. A 16-year size will require 3 7-8 yards of 44-inch material. The width of skirt at lower edge is about two yards. Price 10 cents.

3857. Boy's suit. Cut in four sizes: 3, 4, 5 and 6 years. A 4-year size will require two yards of 44-inch material. Price 10 cents.

3853. Girl's dress. Cut in four sizes: 8, 10, 12 and 14 years. A 10-year size will require 3 1-8 yards of 44-inch material. Price 10 cents.

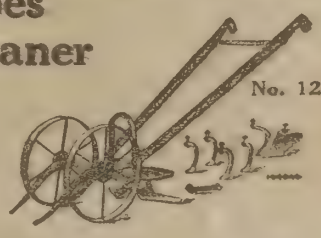
Calumet is made under such exacting conditions—packed in such a scientific manner, that its leavening strength and purity never vary. It retains its original strength for months after leaving the factories.

When you tip the can to get the last spoonful, you know your baking will turn out all right—the last spoonful is the same as the first. This uniform quality of



CALUMET BAKING POWDER

is cause for its big demand. Housewives know they can depend upon the results obtained—that climatic conditions or temperature cannot deteriorate its positive leavening power.

When you buy baking powder remember these facts—that a uniform leavener means bakings that do not vary in quality—that Calumet *is* uniform.

A pound can of Calumet contains full 16 oz. Some baking powders come in 12 ounce instead of 16 ounce cans. Be sure you get a lb. when you want it.

Planet Jr. hoes quicker and cleaner

A Planet Jr. wheel hoe makes light work of the kitchen garden. There's no vicious chopping and stabbing at tender, growing plants when you use this **No. 12 Planet Jr. Double and Single Wheel Hoe Combined.** Not only does it hoe closer to the row than you can safely work with the old hand hoe, but it does much more—and better—work than you can do in the old way. No. 12 straddles and hoes both sides of a row at once, sliding easily along as you walk. The sharp hoes clip weeds clean off below the surface, and leave a fine protective mulch. So easy to handle, a woman or boy can easily do the garden work, saving man labor for other more pressing farm work.

High Points in News of the Week

(Continued from page three.)

Lawrence-Great Lakes waterway project to give the Great Lakes water transportion.

Development of the Mississippi and other leading rivers for the transportation of commerce.

Maintenance of the present system of toll charges on the Panama canal.

Development throughout the country of waterpower electric projects with a view to making electricity available for small consumers on the farm and in the villages.

Closer cooperation of railway, waterway and highway transportation.

The appointment of a commission to work out a national land policy, including reclamation, irrigation, grazing and colonization.

Delay in opening any more public land for farming purposes until the present agricultural crisis is over.

The defeat of any measure proposing any consumption tax, sales tax or manufacturers' tax, on the ground that such tax would be passed on to the producers and the consumers.

The conference endorsed the agricultural bloc in congress.

President J. R. Howard of the American Farm Bureau federation, who was a delegate to the conference, declared that it would go down into history as the most far-reaching farm conference ever held. Secretary Wallace, who called the meeting at the request of President Harding, expressed himself at its conclusion as highly pleased with the results obtained.

At the opening of the conference President Harding appeared in person and laid before it his ideas of the need of agriculture. He laid great stress upon the necessity of practical cooperative marketing and urged more liberal credit to the farming industry. He expressed sympathy with a scientific limitation of production along certain lines as a means of stabilizing the industry. Indirectly he expressed disapproval of the farm bloc in congress, though it was not mentioned specifically.

* * *

Chairman Lasker of the United States shipping board has set February 8 as the date on which he will meet Herbert Fleishacker to discuss the proposed $30,000,000 shipping pool on the Pacific coast. The shipping board has announced its determination to do everything in its power to build up the American merchant marine, routing every cargo possible on vessels flying the United States flag.

* * *

Agricultural college extension workers of 11 western states are meeting in Portland this week to coordinate agricultural extension service.

* * *

While considerable opposition has been expressed in congress over the treaty between the United States, England, Japan and France for the control of affairs on the Pacific ocean, the admiuistration at Washington expresses confidence that the recommendations of the disarmament conference in this regard will be accepted and the treaty put into effect.

* * *

The California Fruit exchange makes the statement that approximately half of the orange crop and a third of the lemon crop of that state has been lost as a result of the cold weather that visited that district two weeks ago. The loss is roughly estimated to run between $15,000,00 and $20,000,000.

* * *

Unofficial report comes that Secretary Fall of the department of the interior in President Harding's cabinet will soon announce his resignation, to take effect March 4. It is understood that he will return to his home state of New Mexico and become a candidate for the United States senate, from which he resigned a year ago to accept appointment in the cabinet.

* * *

The Pacific northwest and the Pacific coast in general are not alone in suffering from severe weather at this time. The Atlantic coast, especially that section in the vicinity of Washington, D. C., suffered a severe snow and wind storm last week. Street traffic in the national capital was completely tied up Saturday and Sunday by two feet of snow. Heavy storms were reported on the Atlantic coast. New York also was snowed in.

Farm Business and Markets Outlook

(Continued from page five.)

cottonseed meal, 43 per cent, $43.50; 36 per cent, $39.50; oil meal, $46; tankage, $52.50@55.

MINNEAPOLIS—Bran, $20@21.50; standard middlings, $27@30; flour middlings, $23@24; red dog, $27@30; oil meal, $48.

HAY MARKET WEAKENS.

Higher prices in distributing markets and lower freight rates eventually brought increased receipts, while demand failed to increase proportionately, and most markets have been weak in the last few days, especially upon low grades. Inquiries from the south have been more numerous and the movement in that direction as well as toward the eastern consuming sections is expected to increase enough to prevent any decline of consequence.

CHICAGO—No. 1 timothy, $21@22; No. 2, $18@19; No. 3, $14@15; No. 1 light clover mixed, $19@20; No. 1 clover, $16@17; No. 1 clover mixed, $17@18; sample and threshed hay, $10@15; No. 1 to choice alfalfa, $14@22; Nebraska and South Dakota prairie, $14@17. Straw: Rye, $15@16; oat, $13@14; wheat, $12@13.

EGG PRICES ERRATIC.

Following the phenomenal decline in egg prices early in January the market has been unsettled, fluctuating over a wide range within a few days' time. Strength predominated over weakness during the last seven-day period, although receipts have held up to the level of preceding weeks. Prices upon fresh eggs will undoubtedly work lower in the next 60 days, but the immediate course of the market is uncertain, with weather conditions an important influence. While declines are in prospect wide margins will prevail between country buying prices and prices in central markets.

BUTTER MARKET FLURRY PASSES.

Following the decline in the butter market in the last six weeks prices became highly unsettled for a time, but the flurry seems to have passed with the development of a more steady tone during the last week. Confidence is lacking, as lower prices are undoubtedly ahead, although they may not arrive for another month. Top scores have been well cleared, but there is a moderate accumulation of the lower grades, especially on eastern markets, where foreign butter is available. Prices on cold storage butter, most of which is of poor quality, have been irregular, but holders are disposed to let go as rapidly as possible, even at concession in price, so that the net reduction in cold storage stocks at the four leading cities has been rather rapid. The Danish butter market has been more firm and is quoted at 35 to 36 cents c. i. f, compared with 23 cents for New Zealand. A shipment of 4427 casks of Danish butter and five cars of New Zealand sent via Vancouver arrived at New York during the week.

The sharp break in the butter market recently has left cheese on a relatively high basis. Cheese dealers expect readjustment through a decline in the cheese market, although light cold storage stocks of cheese may sustain prices.

FRUITS AND VEGETABLES.

The carlot movement of apples for the season up to the middle of January is about 18,000 cars less than for the previous season. This is a decrease of about 20 per cent. Prices still hold a faily even keel, with Baldwins quoted at $7 to $7.50 per barrel wholesale in consuming markets.

LATEST QUOTATIONS.

ALBATROSS BRANDS

Prevent

the "blotch" or "burn" of the spray on fruit

Observe this study in contrasts. The apple at the left was sprayed with Arsenate of Lead—a wonderfully good spray. But the user neglected to mix "Spray Spread" with it. Below is a similar apple—sprayed with the same kind of spray—but Albatross Spray Spread was mixed with the spray. Note the difference—the "lead" dried on the FIRST apple in spots or blotches. The second apple received an equal amount of protective spray—but it spread over the apple in a thin film. Appearance and marketing appeal of the apple is thus retained. The pictures tell why Government experts are so enthused over "Spray Spread"—why experienced horticulturists say it has NO equal for spreading an "arsenate of lead" spray.

Note the "blotch" or "burn" of the lead on this apple

ALBATROSS "SPRAY SPREAD"

(Calcium Caseinate Compound)

The Original and Genuine Spray Spreader

Quality Features:

1. Very finely ground—always uniform.
2. Quickly Soluble.
3. No lost time.
4. Protects fruit with uniform coating.
5. Does not injure foliage.
6. Recommended by experts.
7. Guaranteed by manufacturers.

Directions sent with each order

Note the uniform, adhering film on this apple

BETTER GARDENS EASY TO KILL WEEDS AND MULCH THE SOIL

BARKER WEEDER, MULCHER AND CULTIVATOR

Don't do garden work the slow, backbreaking way. The BARKER makes the finest gardens possible—quickly, easily. Simply push along rows (like lawn mower)—8 blades revolving against underground knife destroy the weeds and in same operation break the crust into a level, porous, moisture-retaining mulch. Aerate soil. "Best Weed Killer Ever Used." Has leaf guards, also shovels for deeper cultivation. A boy can run it—do more and better work than 10 men with hoes.

BEDTIME STORIES

By THORTON W. BURGESS.

Copyright, 1919. T. W. B.

LENDING JERRY A HAND.

Just who started it nobody seems to know, possibly it was the Merry Little Breezes, who are forever trying to do something for somebody else. Anyway, they did a lot of whispering and giggling as they watched Jerry Muskrat making ready to build his new house. Afterward they danced away across the Green Meadows. In a surprisingly short time all the little people who live in the Green Meadows and in the Green Forest seemed to know all about what was going on at the Smiling Pool. And they all seemed to have the same idea, which was—what do you think? Why, to help Jerry Muskrat to build his new house.

Jerry didn't ask for any help. Oh my, no! Such a thought never entered the head of Jerry Muskrat. You see, there isn't a lazy bone in Jerry's plump little body.

Jerry Muskrat likes to work.
And though he likes to play,
He'll never, never, never shirk
The duties of each day.

So when Old Mother Nature whispered in his ear that he ought to build a new house and make ready for a long, cold winter, Jerry started in to work right away. He didn't even mind when Billy Mink and Little Joe Otter made fun of him, but dug away down in the mud at the place where his new house was to be.

"What are you going to make it of?" asked Billy Mink as he sat kicking his heel on the Big Rock.

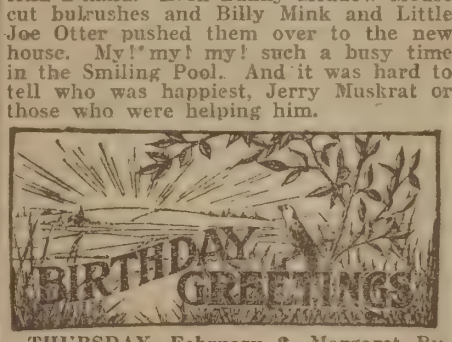
"Mud and sticks and bulrushes and grass," replied Jerry Muskrat as he started to swim to where the alders grow beside the Laughing Brook. There he found Peter Rabbit sitting on the bank.

"Hello, Peter Rabbit!" said Jerry Muskrat, as he began cutting young alder

Pretty soon Jerry was back in the alder thicket for another load.

shoots. When he had all he could carry, he started to carry them over to where he was building his new house.

thicket for another load and there he tihcket for another load and there he found the nicest, the very nicest kind of a surprise. Can you guess what it was? It was a great bundle of alder shoots all ready for him to push across the Smiling Pool. Yes, sir, there they were, and there was Peter Rabbit grinning and cutting more. Jerry Muskrat was so surprised he could hardly believe his own eyes, and he actually stuttered as he asked:



"Wha—wha—what does this mean, Peter Rabbit?" Peter grinned more broadly than ever as he replied:

"It means that I want to help build that new house, Jerry Muskrat, and I am going to cut all the alder shoots you need."

Jerry Muskrat thanked Peter Rabbit and swam off with the alder shoots. Pretty soon he needed some willow shoots. When he reached the place where the willows grew he found another surprise—the nicest bundle of willow shoots, all cut, and Johnny Chuck cutting more.

"You can't have all the fun to yourself building your own house!" cried Johnny Chuck, his eyes sparkling.

And so it was that everybody tried to lend a hand. Even Danny Meadow Mouse cut bulrushes and Billy Mink and Little Joe Otter pushed them over to the new house. My! my! such a busy time in the Smiling Pool. And it was hard to tell who was happiest, Jerry Muskrat or those who were helping him.

News for Breeders

Among the important live stock sales scheduled for the near future are the following:

Davis-Butchart Holstein sale, Granger, Wash., February 6-7.

W. A. May Poland China sale, Toppenish, Wash., February 8.

Mulhall & Sons sale of Shorthorns and Percherons, Buena, Wash., February 14.

Hugh Walter sale of Poland Chinas, Yakima, Wash., February 18.

Swine Breeders' association sale of several breeds, Spokane, February 21.

Shorthorn breeders' consignment sale, Spokane, February 22.

Day & Rothrock Co., Shorthorn sale, Sprague, Wash., February 23.

A. D. Dunn Shorthorn sale, Wapato, Wash., February 24.

A new Holstein record for the Yakima valley has been made by a cow owned by Butchart Brothers of Sunnyside, Wash. Princess Pietertje Artis, a 7-year-old registered Holstein, has just produced in seven days, on official test, 24,896 pounds of fat, or 31.12 pounds of butter. She is a showy individual and is sired by Pietertje Sir Posch, her dam being Princess Yetive Artis 2d. The former Yakima valley record for a number of years has been held by a Holstein owned by William Todd & Son of Yakima, and is slightly under 31 pounds.

C. T. Myers of Prosser, Wash., believes the horse is here to stay and that good big drafters will always be in demand. Mr. Myers has three registered Belgian mares. Two of them were shown at the Washington State fair, winning first and third, and senior and grand championship. At the Pacific international, at N. Portland, in a great class, the two mares stood second and third.

The Duroc Jersey swine sold at the Charles Sprong Holstein sale at Grandview, Wash., January 20, went low. S. C. Chaffee of Sunnyside, Wash., topped the sale when he bought Stadicona A 1, the sow that has several grand championships to her credit, for only $71. Chester Murphy, a pig club boy, secured a fine daughter of King Orion Gano for only $51.

An Aberdeen Angus yearling bull and yearling heifer were recently shipped to Honolulu, Hawaii, by the well-known Aberdeen Angus breeders, Congdon & Battles of Yakima, Wash. A Mr. Robinson, who is starting an Angus herd, was the buyer. Mr. Battles reports that this is the third shipment they have made to the Hawaiian islands.

Wheat Growers Look Forward

(Continued from page three.)

popular in the northwest as milling grains. A comparison was made of four varieties, Bluestem, Early Bart, Hybrid No. 128 and Turkey red, as they grow in the Big Bend and the Palouse regions, respectively. In all cases, he said, the Big Bend wheat was harder, more easily milled and higher in gluten content than the Palouse wheat. Loaves baked from each were exhibited in striking confirmation of the statement. For pastry, however, Mr. Harshman pointed out, high gluten content is not desirable, and the low-strength flours are used. In crackers, macaroni, etc., the two types of flour are usually blended.

One of the interesting features of the convention was a trip through the Sperry flour mill, in the outskirts of the city.

Professor Severance of the state college discussed investigations carried on by the state college and the department to learn as nearly as might be the cost of grain production. Wide differences of cost were found, resulting from different conditions and differing degrees of efficiency on the part of growers. He emphasized the necessity of a reasonable volume of business by the producer, a good yield, the production of some live stock and the efficient use of labor.

Another of the most interesting discussions of the convention was that of diversified farming by Dean E. J. Iddings of the Idaho college of agriculture. He declared that the soils of the grain growing sections were becoming depleted by the one-crop system, and that diversity of production was necessary.

Other important subjects were discussed by qualified speakers, among them the following: "Application of Federal and State Grain Grades," by D. W. Whitlock of Portland and J. C. Cunningham of Seattle; "Problems of the Farmer as Seen From His Own Viewpoint," by W. J. Robinson, manager of the Washington Wheat Growers' association; "Application of the United States Warehouse Act," by R. L. Cox of Spokane; "Tillage Methods in the Big Bend," by B. B. Gillispie of Ritzville; "Taxation," by F. J. Wilmer of Rosalia, and "Grain Varieties and Smut Control," by E. G. Schafer of the state college farm crops department.

Extracts from and references to addresses and discussions during the convention will be made in later issues

Please mention THE WASHINGTON FARMER when writing

Inland Empire Breeders' Annual Sale of SHORTHORN CATTLE

Spokane, Wash., Feb. 22, 1922
(Washington's Birthday)

60 Head (30 Bulls and 30 Females) 60 Head

SELECTED CATTLE—A culling committee has passed on every animal that is listed in this sale which guarantees that only cattle of good quality and breeding will be offered.

30 Bulls—In this lot will be a number of herd bulls, bulls that should be used in registered herds. There will also be a large selection of strong range bulls and we would advise buying now, as restocking, which is now taking place, will demand every available bull in the spring.

30 Females—There is no better investment at the present time than a good Shorthorn cow. With the low price on feeds, the carrying charge is small and you will have a salable calf which will pay good interest on your investment. The females listed in this sale are good herd material and we hope they will be purchased by new breeders.

Sale will be held at Spokane Union Stockyards on Washington's birthday.

D. C. KEITH, Auctioneer.

Who Gets The Washington Farmer Prize Pig? -See Page 6

Martin Neuman

Tries Out Raising Sunflowers

Wishing to learn something of his farm conditions, of his plans and his hopes, the editor of The Washington Farmer, October 6, 1920, sent a letter to Martin Neuman, whose postoffice address is at Goldendale, Wash. Mr. Neuman is one of our large army of subscribers. It is with much pleasure that after considerable delay we have received the following letter from Mr. Neuman under date of January 10, 1922. Mr. Neuman writes:

"I am accepting your invitation of more than a year ago to let you know about the condition of my farm, etc. I came here in the spring of 1919 and settled on a 40-acre farm. Bought the adjoining 40 acres last spring. Have about 30 acres under cultivation with 11 acres of 7-year-old apple orchard on it—the rest is in timber and pasture. A small irrigation ditch runs through my farm from which I can irigate part of my land. I also have 450 bearing loganberry plants. Am sending

Martin Neuman in his field of sunflowers.

you a picture of sunflowers raised on my land last year. I read in our magazine some time ago that the sunflower is a good forage plant producing a heavy crop of good stock feed. I agree to this as I think that it is good for that and I also have lived in a country where the oil from its seed is used extensively for cooking and table use. I have seen the 'yellows' grow 14 feet high with a stem three inches in diameter and head 24 inches in diameter—on the Asiatic side of the Black sea.

"I tried to raise potatoes here—Netted Gems and Burbanks—with and without irrigation, but did not have much success. Would like to know what kind of potato, if any, would do well here, preferably without irrigation. The soil is volcanic ash and has a tendency to 'pack,' but it holds moisture fairly good.

"I had a fairly good crop of yellow field corn last year, some of the stalks being seven feet high, but I have seen better in other places. I also had a rather light crop of sugar cane.

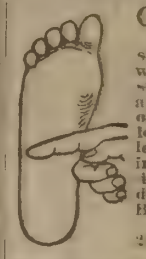
"Most of the land in this country is devoted to raising wheat, but as I have not sufficient acreage for that to make it profitable I would be much obliged to find out what other crop would do well in this soil and climate."

TRANSFER DAIRY HERD TO BOYS.

Governor Louis F. Hart has made a change in the operation of two of the state institution dairy herds, supplying other work for the girls at Grand Mound training school and transferring their milch cows to the boys' training school at Chehalis. The latter institution will supply the Grand Mound school with milk and cream by daily shipments.

A few boarders were found in the herd at Grand Mound, which were disposed of, giving only the better producers to the larger barn at Chehalis. The governor plans to add other registered Holsteins to the number which are already being managed by the boys and give them an opportunity to operate on a larger scale.

Cow Testing Contest



"It is rather early to predict results for the association year, which ends March 31, but I do not think the Jerseys will have any walkover. In fact, they must show some real form to finish in first place," writes Elmer L. Walker of Mohler, a Holstein enthusiast in the Nehalem Valley Cow Testing association. His signature, "Yours for association testing," indicates that he is also a "Babcock" enthusiast.

The W. P. Walker and the Elmer L. Walker Holstein herds have led the Nehalem association for three months past. In October the W. P. Walker herd of seven purebreds averaged 39.7 pounds of butterfat each, in November 34.5 pounds and in December 37.9 pounds, thus ranking as high purebred herd.

The Elmer Walker herd of 13 grades averaged 38.5 pounds each in October, 34.5 pounds for November and 31.9 for December, thus ranking as high grade herd. The Jersey herd of Gus Peterson was third each month.

VISIT COLLEGE IN JULY.

The regular summer meeting of the Grain Growers, Shippers and Millers' association is held at Pullman between July 4 and July 10. Attention was called at the midwinter session at Spokane this year to the fact that Pullman is but a three hours' drive from that city, and from many other points it is as accessible. It is hoped that the summer session will be attended in large numbers.

LEND A HAND TO COOPERATION

Our cooperative plan has benefited thousands of readers throughout the state, and we are starting the new year with the determination to make 1922 the biggest year yet for this plan. In order to do this we ask each and every one of you to lend a hand. The tools won't stay sharp unless we all take a turn at the grindstone. What we did last year doesn't help if the axe is dull this year. We have to pour a little more water on the wheel and go to it again.

So we repeat, send your subscription orders direct. Get your neighbors to do the same. We will give you and your neighbors the benefit of every penny which would ordinarily go to the agent handling the subscription.

We have every confidence that you will continue to cooperate and repeat our request that you take thought as to your subscription renewal. Instead of waiting for a notification, mail in your order at least 60 days in advance of the address label of your paper. Tell your friends and neighbors about our cooperative plan and include their orders with your own. By all pulling together we can and will make 1922 a record year for cooperation. Let's do it!

For Good Farming, Attractive Country Homes and Happy Country People

Congressmen Favor Price Leveling

The Washington Farmer's Letter to the President on Fundamental Needs Is Vigorously Endorsed

Congressman John Kissel, representing the Third district of New York, writes to The Washington Farmer: "Your letter will be submitted as a petition to congress, noted in the congressional record and reported to the committee charged with the subject and listed under my name."

Congressman Kissel refers to the open letter to President Harding by THE FARMER respecting the five points which seem to be uppermost in bettering the present conditions of the farmers of the country. These points were as follows:

(1) The most outstanding need of the hour is price leveling—the bringing up of the farmer's price or the bringing down of the other fellow's. The farmer's need of credit is due to the present inequality of prices, and credit will be supplied when the price inequality is removed. Price equalization is imperative if the world is to continue to eat and be clothed.

(2) Present freight rates are ruinous to agriculture and are detrimental to industry at large. They should be promptly reduced.

(3) The farmer is entitled to protective tariffs commensurate with those enjoyed by the manufacturing industries.

(4) With large exports of American breadstuffs during the past calendar year, the price to the farmer here has been, in many cases, below the cost of production and seldom equal to this cost plus a living profit. This situation deserves searching investigation. The entire export field needs far-reaching and scientific development for all farm products.

(5) Any and all doubts as to the legal rights of farmers to market their products through cooperative associations of their own formation and under their own control should be swept away by clear-cut national legislation.

With regard to the above open letter to the president Congressman Theodore E. Burton writes to THE FARMER: "The suggestions you make are receiving very careful attention here. I do not, however, quite see how freight rates can be reduced unless there is a decrease in the cost of operation or a very much larger traffic obtained. Possibly a decrease in rates would increase shipments so that a partial reduction could be made. One of our sources of great prosperity before the war was the low freight rates by water transportation, as on the Great Lakes. Rail rates also, especially for long hauls, were lower than anywhere else in the world."

It will be remembered that Congressman Burton has a large congressional experience and has been one of the most prominent of the national legislators. He was chairman of the inland waterways commission appointed by President Roosevelt. As a member of the executive committee of the interparliamentary union he participated in meetings at St. Louis, London, Geneva, Paris and The Hague.

United States Senator Miles Poindexter of the state of Washington takes a deep interest in the agricultural situation. He writes to THE FARMER: "I agree with you in the program you lay down. I think the matter of price adjustment or relative leveling of prices so as to bring farm products up and some other things down will probably be the result in part of some of the other measures you propose, with all of which I heartily agree. I have very great confidence in the ability of the farmer not only to bring about the results indicated, but to generally protect his interest by comprehensive and businesslike organizing with capable agents and representatives. This can be done under existing laws as demonstrated in California. But I will be very glad to support a measure removing any doubts about it, if desired."

Senator W. L. Jones of the state of Washington writes: "I am glad to have your suggestions and I think I am in favor of every proposition that you present and will do all that I can to bring these things about."

Congressman E. O. Leatherwood, representing the Second district of Utah, says: "I think each of the points mentioned is vital and prompt steps should be taken by the government to care for our basic industry of agriculture."

Congressman Don B. Colton of the First district of Utah writes: "We are all agreed on the evils that exist. We know that conditions are not what they ought to be, but to date no one has pointed out specific remedies, particularly as they affect the freight rates. The railroads insist that they are making no money and an examination of their books seems to corroborate their statements, and there certainly is no existing law by which their rates can be reduced except upon order of the interstate commerce commission, and no one seems thus far to have convinced the commission that the rates should be reduced. A practical solution of the railroad situation is the crying need of the hour."

Along this same line Congressman J. D. Beck of the Seventh district of Wisconsin writes: "I think you might add No. 6 to the five you have, namely: Prohibition of fraudulent imitations of farm products."

Congressman A. M. Free, representing the Eighth district of California, writes: "There is one point that I would suggest you add to the letter and that is an improved distributive system for the farmer. At the present time middlemen have a stranglehold upon the farmer and bleed him tremendously for the small service rendered. We need better and cheaper distribution for farm products. I represent one of the largest farming districts in the United States and I know a great deal of the farm problems."

Congressman John C. Ketcham, representing the Fourth district of Michigan, has this to say: "In view of the conference now being held here at Washington I am pleased to say that the suggestions you offer as particularly applicable to the northwest are likewise very much in point so far as the agriculture of the whole country is concerned, and from the opening statements made at the conference yesterday I believe that most of these matters are to be carefully considered at the meeting and constructive reports made on them."

Lincoln

By JULIA M. MARTIN.

Fair in the city whence the nation's life
Flows in its fifty arteries, there stands
A classic pile that shrines a mighty name.
St. Gaudens, too, has wrought, and in the West,
Behold, a form familiar, tall, uncouth.
Many a lake and forest, hill and stream
Bears the beloved Lincoln name today,
And universities, and stately ships,
And noble avenues, the word resound.
A Bible, yellowed, worn, some rough-hewn rails
And bits of carpentry we treasure still.
A Mecca, now, the humble home becomes,
So mightily the fallen hero's spell
Is on us yet! But, in a larger sense,
We can not consecrate, we can not hallow
His noble name. The deathless words he spoke
Have consecrated, far beyond our power,
That name, and for immortal Lincoln's sake
A grateful wreath shall twine forever green.
The world will little note, nor long remember.
Our tribute all too poor. His deathless words
It never can forget. It is for us,
The living, to be dedicated, rather,
To the unfinished work that fell untimely
From those great hands.—What words but his suffice?—
It is for us to take increased devotion,
Here, to the cause for which our selfless Lincoln
Rendered, indeed, devotion's last full measure.
Here, to resolve that he, our honored dead,
Shall not have died in vain; that we will finish
With honor that which falls to us. This nation
Under God shall have a new birth of freedom.
Government of the people, by the people,
And for the people, Lincoln, shall endure!

State Farm Bureau Opposes Discriminatory Freight Rates

The Washington State Farm Bureau federation at its recent annual meeting at Yakima took a wise and far-seeing stand in support of the fight that the Intermediate Rate association is making for an absolute long and short haul law; that is, a law by congress to prohibit the railroads charging more for the short haul than for a longer haul to a more distant distribution.

The Intermediate Rate association, of about 200 chambers of commerce, commercial clubs, farm organizations, live stock associations and other community bodies, is combating the efforts of the transcontinental railroads to get permission from the interstate commerce commission to engage in a rate war with the ships at the Pacific coast terminals.

The railroads have driven the ships out of this business before, and the apparent purpose now is to do it again. Having achieved that purpose, they would, of course, then advance freight rates again to the Coast terminals. But, meanwhile, they are wanting to make the interior communities pay for the cost of the proposed rate war with the ships at the terminals.

The American people have put nearly $4,000,000,000 into a government built and owned merchant marine. The country, therefore, now has two arms of a transportation service—the railroads and the ships. The ships find it profitable to bring merchandise around from the Atlantic coast through the Panama canal to the Pacific coast, and on the return voyage to carry products of the Pacific coast region. It is highly desirable for the farmers and other producers of raw materials in the Pacific coast states to have a continuance of this ship service.

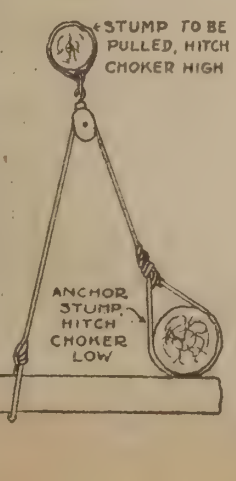
Moreover, it is to the national welfare that the double line of transportation service be maintained. If the railroads were permitted to drive the ships out of the Pacific coast harbors and scatter and demolish the government merchant marine the railroads would soon be unable to take care of the heavy traffic across the continent. We would be right back in the trouble that we suffered during the war and immediately following the war—lack of cars, slow service, interminable delays and a haughty attitude by the railroads toward the shippers.

Then a demand would be made upon the country for hundreds of millions of dollars of new capital to increase the facilities of the railroads—to double-track their lines, to bore larger tunnels through the mountains and to increase their terminal facilities at the Coast cities.

But why perpetrate that folly? Why should the interstate commerce commission permit the railroads to impair or to destroy an important transportation agency (the ships) that the country and its industries will need increasingly in the next few years? With the return of prosperity and the growth of western industries we shall need both the railroads and the ships. If we have the double and competitive service it will mean a great deal for the development of our industries and the prosperity of our people.

If the railroads were given a free hand they would impose a double economic burden upon the western country. They would go back to their old, wasteful method of hauling merchandise clear through to the terminals and then hauling a large part of it back to the consumers in the interior. But that is a sheer economic waste, as the interstate commerce commission told the railroads long ago.

The truth is that the transcontinental roads are not suffering unduly from the competition of the ships. With the exception of the Chicago, Milwaukee & St. Paul, all of the transcontinental roads, from the Canadian Pacific on the north to the Santa Fe on the south, are making good net earnings and are in a position to pay good dividends.



The Washington Farm Bureau federation is to be commended for adding its influence to that of other farm organizations that had already gone on record in this matter.

One-Horse Device for Stump Pulling

Charles Meyer of Alderwood Manor has a home-made stump puller that he works with one horse. The main power is with the pole, which is a small log a few inches in diameter and 20 feet long. One end of this is set against a stump with a cable attached a few feet from the stump, while the horse is hitched to the farther end.

If the stump to be pulled is not too large it can be pulled without any tackle, but for larger ones the cable should be run over two or three blocks to increase the power. In this way Mr. Meyer is able to secure as much as 10 horsepower with the use of only one horse. The operation, of course, requires some rehitching and the changing of the blocks to take advantage of the different positions.

The problem of stump pulling is a big one in parts of this state. First class stump pulling machinery is manufactured for operation on either a small or a big scale, and in many instances neighboring farmers can go in together to purchase a suitable implement if the needs of one are insufficient to warrant its purchase by one farmer alone.

WIRELESS MARKET REPORTS.

The wireless is now being used by state and federal agencies to broadcast national and local agricultural market reports throughout virtually the entire country. Reports on the national markets are dispatched daily by the United States department of agriculture from wireless stations of the postoffice department at Cincinnati, Omaha, Washington, North Platte, Neb., Rock Springs, Wyo., Elko, Nev., and Reno, Nev. These reports are received by hundreds of amateur wireless operators. National market reports are also received by state bureaus of markets and agricultural colleges, supplemented with local market reports, and relayed by wireless telegraphy and telephone to farmers, shipping associations, newspapers, banks, and other agricultural interests.

A most complete program in the dissemination of market reports by wireless is being planned by the state bureau of markets in Ohio, a specially constructed radiophone transmitter of the most improved type being installed in the radio station of the University of Ohio for that purpose.

OUR GUARANTEE TO SUBSCRIBERS.

Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unused portion of the amount paid for the subscription will be refunded. You must be satisfied.

Entered as second-class matter, January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879.

GUARANTEE OF ADVERTISEMENTS

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible bankrupts. Complaints must be sent to us within 30 days from the date of the transaction and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of diseases in stock sold through these columns.

"College Bred" Wheat

One of the valuable things that is done at the state college is the testing of a large number of varieties of wheat. This is not with the object of producing a large number of wheats adapted to our northwestern wheat belts, but to eliminate the less profitable and improve and retain the most profitable. A variety is first given a test in a row of a rod's length, and the results compared with those from similar rows of other varieties, each planted from seed of the best condition and utmost purity possible, and under uniform excellent tillage conditions. A variety that justifies further tests is then given a fortieth of an acre in which to show what it can do, again in competition under uniform conditions with many other varieties. The threshing of these small quantities of wheat is achieved through the use of a small machine from which all wheat is readily cleaned, so that the check upon the yield is very exact and varieties are not mixed.

Valuable results have already been obtained. Many of our best wheats are "college bred."

The Right Kind of Research

Raymond A. Pearson, president of the Iowa State College of Agriculture, told the national farm conference at Washington that agricultural research, if properly developed, will put agriculture on a permanent and profitable basis in the face of ever-increasing obstacles. President Pearson said that well-trained men and ample funds are the essentials of research, and there should be a national policy to train and encourage the right kind of men and women and to supply funds to meet their reasonable needs in research work in the interests of agriculture. Young men and women should be encouraged to prepare themselves for research work. The work should be supported by liberal federal and state appropriations and the knowledge derived should be made available to every farmer throughout the country.

Existing conditions in American agriculture are not conducive to an immediate enthusiastic reception of President Pearson's recommendations. The average farmer feels that it is a condition, and not a theory, that is confronting him, and that he does not at this moment need a great deal of advice about the production of larger crops still further to hammer down the low prices of agricultural products.

Nevertheless it would be a mistake to abandon scientific research in the field pointed out by President Pearson. It can be only a question of time until the world's markets will come back to normal and we shall see an increasing demand for the products of American farms. Our own steady growth of population would insure that, even though there should be no increased demand from foreign countries.

A great deal will depend, however, upon the character of the research that is to be made. To a considerable extent, American agriculture will always have to be in competition with the agricultural production of the rest of the world. Agricultural research of the future should, therefore, be directed in large measure to pointing out ways for the elimination of wastes in production and the reduction of the cost to the individual farmer.

Moreover, research in future should be directed more extensively into cooperative marketing and the cutting down of the tolls that are taken between the producer and the consumer.

Another beneficial line of research that should be persistently followed is betterment of sanitary conditions on the farm, the elimination of unnecessary drudgery, both for the farmer and for farm women, and the development of interests that will keep more of our country boys and girls on the farm.

Many roads open up before the research worker, and at this time the devising of ways to increase production is the least appreciated part of such study.

Cost of Milk Production

Referring to the price of $2.75 per hundred pounds that is being paid to shippers of milk who are members of the Seattle Milk Shippers' association, The Monthly News Letter of the Washington state department of agriculture says:

Whether or not milk can be produced at the price at which it is selling on the Seattle market is absolutely an individual matter. Some dairy farmers are doing well selling milk at that price. Others are going further into debt. The only possible opening for the man who can not produce at the present price and make a profit is to improve his methods by taking lessons from the more successful man, who is finding a profit at the present prices.

The News Letter states the case with striking frankness. A survey of a considerable number of dairy farms in western Washington some time ago indicated that the average cost of milk production was somewhat higher than this price of $2.75. However, there is no question that, as the state department says, there are dairymen who are making a profit at this price.

There are a great many ways in which the dairy farm may be made more efficient and the cost of production thereby reduced. One of the outstanding essentials in production at a minimum cost is the use of high-producing cows. It makes no difference how efficient may be all other phases of a man's dairy farm if the cows on it are low producers. If they are high producers a great many other possible points of efficiency may be passed by and a profit still made. That dairyman, however, who has the high producers and at the same time practices genuine efficiency in all the phases of his business is the fellow referred to in the foregoing statement as making a profit at the prices now being paid.

The Wormy Apple

Although the following took place at one of the county fairs last fall, it carries a suggestion that may well be borne in mind by any one showing produce in a community or a state fair.

A very attractive plate of apples was turned down by the judge who looked at only one apple. The man who selected the fruit stood by and noted that the plate which was given first place was not as true to type as were his own that had received no placing. When the class was finished the judge paused for a few moments and the apple grower approached him, asking why his exhibit did not place. The expert asked which one he referred to, and when it was pointed out he picked up one apple and showed him a worm hole in the calex end.

The grower admitted that it was an oversight on his part and that he should have been more careful in looking for blemishes. It was his first attempt at showing fruit and he had paid too much attention to type and color. The judge agreed and told him that his exhibits would undoubtedly have placed well along among the high winners had he picked out the wormy apple, which, of course, disqualified the whole plate.

State Farm News

The community farm bureau "better sires—better stock" campaign conducted in Kittitas county ended the first of this year, with 159 farmers enrolled. Thorp community won first prize by enrolling 65 per cent of its farmers; Edgemont-Thrall second, with 58 per cent; Denmark third, with 48 per cent; Broadview, 32 per cent; Woldale, 20 per cent; Peih Point, 19 per cent; Fairview, 8 1-2 per cent; Cove-Danman, 8 per cent, and Swauk-Teanaway, 3 per cent. Each farmer enrolled signed a pledge to use only purebred sires and to follow breeding methods leading to live stock improvement. Another contest will be conducted this year, with $65 in cash and a $15 silk banner as prizes.

* * *

Three banks in Adams county have signified their intention each to finance a boys and girls' pig club. The banks are the First National and the American State banks of Ritzville and the First National bank of Lind.

* * *

The La Center Farm Loan association, composed of residents of La Center and vicinity chiefly, the only organization of its kind in that part of Clarke county, held its initial annual stockholders' meeting and election of officers and directors recently with the following results:

President, Mrs. Adella Vail, reelected; vice president, Mrs. Wells Green; secretary-treasurer, Joseph W. Brothers. The directors comprise J. E. Coons, Mrs. Wells Green and William Davis, elected; William Reichow, Reuben Mead, Charles Wright, Mrs. A. J. Shellhart and Mrs. Adella Vail, holding over for another year.

* * *

Two registered bred gilts have been selected for pig club members of Benton county by C. M. Hubbard, live stock extension specialist. The American Security bank loaned the money for the purchases.

* * *

Arrangements have been completed by Professor O. M. Morris of the State College of Washington for three experimental orchards for work on bearing Winesap trees on the land of Donald C. Bunn of Prosser.

An experiment station orchard to be planted in the Yakima valley this spring is to consist of a little over six acres of Red Rome Beauty, Delicious, Winesap and Jonathan trees. Professor Morris hand-selected the young trees.

* * *

A new cannery equipped to pack clams, salmon and other sea foods and also berries will be opened March 1 in East Aberdeen by the Washington Packing company, whose articles of incorporation were filed recently at Montesano. The new company is composed of Hans Nyman, president; J. A. Moller, vice president, and H. H. Schwark, secretary.

* * *

Ranchers in Dodge valley near LaConner have begun operations for the drainage of that district by building a dam across a slough on the T. N. Haller place, near the north fork of the Skagit river. This will act as an impounding basin for dainage water and eliminate the cost of pumping water from the flats. About 1000 acres of the lowland will be benefited and several hundred acres of the highland in the district.

* * *

Three hundred members of the Lewis Pacific Dairymen's association held an enthusiastic meeting at Chehalis January 23, listened to the annual reports of President Scollard and other officers of the concern and elected two trustees. V. M. Bullard of Menlo, Pacific county, was reelected. John O. Connor of Skookumchuck district was chosen to succeed A. N. Bennett, who declined renomination. The affairs of the organization were reported in splendid shape.

* * *

Plans are being considered by the farmers of Douglas county to ship 300 head of high grade milking Shorthorns into the county. This is a part of a campaign to increase live stock on the wheat farms. The work is being conducted by county agent F. H. Zentner in cooperation with the farmers, bankers and business men of the county. It is their desire to place these animals in every community, form bull clubs and use only purebred sires for all the future live stock work.

* * *

A slump of $263,000 in the value of live stock on the Sunnyside project during the last year and the fact that there was a decrease also in the number of automobiles feature the annual report of Project Manager J. L. Lytel upon that feature of the reclamation service activities, says a Yakima report. There was a decrease of about 1000 in the number of cattle, but the cattle valuation at the end of 1921 was greater than a year before because of the higher grade of animals owned.

* * *

Total sales during 1921 of $121,423 on a capital stock of but $7000 is the record of the Grange Warehouse company of Pullman, a cooperative store, during the last year, according to the annual report of the company. The cost of operation was $7322, or 6 per cent of the sales, and an average of five employees were on the payroll throughout the year. The store is operated on a nonprofit basis. During the last two months of the year the sales totaled $26,632. The store is conducted on a cash basis.

The company includes approximately 300 shareholders, including 27 fraternities, sororities and other groups. Each shareholder pays $25 toward the capital stock.

At the annual meeting the officers were all reelected, as follows: President, E. C. Colpitts; manager, C. A. Cassidy; vice president, Fred Hodges; secretary, A. L. Melander; treasurer, Scott Getchell; trustees, E. C. Colpitts and Rolla E. Powers.

Coming Events of Interest

Feb. 9—Yakima Val. Duroc Jersey Ass'n sale, Sunnyside.
Feb. 10—Cowlitz county grange com'nity meet, Kalama.
Feb. 13—Washington berry growers' meeting, Sumner.
Feb. 14—Yakima Guernsey Cattle club, Yakima.
Feb. 15-17—W. Wash. Horticult. Ass'n meet, Mt. Vernon.
Feb. 17—Shorthorn, Poland China sale, Walla Walla.
Feb. 20-21—West. Royal breeders' swine sale, Spokane.
Feb. 22—Shorthorn breeders' spring sale, Spokane.
Feb. 23—Day & Rothrock Shorthorn sale, Sprague.
Feb. 24—A. D. Dunn Shorthorn sale, Wapato.
March 7—Holstein-Friesian Ass'n meet, Seattle.
March 9—Stevens county live stock sale, Chewelah

FARM BUSINESS AND MARKETS OUTLOOK

WHAT THE FORECASTERS SAY:

The professional forecasters who specialize in the prediction of business trends from economic cycles have had some hopeful things to say about the outlook for prices during 1922. Here are their comments:

Babson—"For the first time in two years we do not expect to see lower prices for farm products."

Brookmire—"The first half of 1922 may with considerable confidence be expected to witness a considerable rise in commodity prices. Because such favorable fundamental conditions as exist at the beginning of the year have never in the past been known to exhaust themselves within so short a time as would be measured by a movement up to the middle of 1922, we feel justified in stating further that the second half of the year will witness a further continuation of rising prices."

The committee of economic research of Harvard university has this to say—"It appears probable that 1922 will be a year of easier money, better business, more stable prices and higher profits than was 1921, and there is evidence also that the general movement of business and wholesale prices will be upward. There is no reason, however, to anticipate a boom in 1922."

These conclusions may prove to be erroneous, but they are based on thorough, impartial investigation of the factors which control price movements. Since farm prices were more thoroughly deflated than other groups, it is to be expected that they will rally more than these other groups under influences that tend to raise the general price level.

CATTLE STILL ON SOFT FOOTING.

Reduction in the supply or an increase in the demand for beef, one or both of which will put the steer market on firmer footing, was sought for in vain last week. Ten markets showed a few thousand less cattle and dressed beef prices held up, but values on the hoof made little headway. Lighter receipts will be necessary to restore the jaded market. Since the number of cattle slaughtered during March, April and May over a series of years shows a decline of 15 to 40 per cent below the slaughter during December, January and February, there is a prospect ahead of relief from the present overcrowded state of the market.

The excess of supply at present is not large, so that even if the decrease during the spring months is less than usual, a turn for the better is assured. The local supply in the east and on the Pacific coast already is dwindling, enlarging the outlet from the central states and high prices for hogs and lambs should help the beef trade.

Six weeks hence a deluge of light calves will flood the markets and depress prices to the lowest levels of the year, but meanwhile there is a mild scarcity of veal which has been heightened by the high price of dressed lamb and reduced supply of poultry.

BUY STOCKERS ON BREAKS.

The mean behavior of the fat cattle market and high prices for stocker and feeder steers, compared with those ready for slaughter, checked the outbound movement of thin steers. Evidence is steadily coming forward that competition in this division will increase in a few weeks and that there is little chance of stock cattle trending to a materially lower level so that purchases upon breaks appear to be in order.

Last fall the premium upon fat yearlings was one cause for the preference for light steers on the part of feeders. Steers with weight are now selling at the top and in consequence fleshy feeders are attracting more attention, buyers playing for a better spring and summer market.

1,200,000 HOGS SHORT.

Since November 1, the number of hogs packed in the west, so called, as compiled by the trade has fallen 1,200,000 head behind the same period of last year. The total up to January 21 is 7,798,000 head. Hogs are being held back to some extent for longer feeding, gilts are being retained for breeding purposes as production has been stimulated, and there was a slight decrease in the hog population of the country last fall as compared with the prevous year. On the other hand, there is no letup in domestic consumption. Exports of lard and hog meats during the first four weeks of January were 35 per cent larger than in the corresponding period of 1920, the total being 129,000,000 pounds.

Prices advanced to the highest average at Chicago since last August on a smart upturn early last week when the top reached $9.60. A reaction followed, as the advance may be a little premature, and a liberal run is expected through February, but it will be a reversal of nearly all previous market history if the high point of the first half of the year is uncovered in Jaunary.

DRESSED LAMB MARKET STRAINED.

The advance in the lamb market constantly predicted in these columns last fall has exceeded all expectations and now bears a top-heavy appearance. The dressed lamb market has shown signs of crumbling under the strain, as prices are out of line with other meats. Reports of a cargo of frozen Argentine lamb due to arrive soon in the east was a factor, but the British market is high enough to prevent much of this stuff from coming to the United States. If British prices should decline, some New Zealand frozen lamb might find its way to this country, but such an event is not anticipated. A year ago at this time, cold storage holdings of frozen lamb were at their height. Present stocks are small.

The advance in the lamb market has aroused a big demand for pregnant ewes, but few of them are available, as the sheep industry is definitely past the stage of liquidation.

HORSE DEMAND INCREASING.

The spring increase in the demand for horses is showing up slowly, but thus far receipts at distributing markets have increased in like proportion so that prices have not improved materially and at Chicago some declines have occurred as compared with early January. Purchases of farm chunks are expected to reach large volume in the next two or three months and some improvement in values during this period is altogether probable. The southern states are increasing purchases at St. Louis, but quotations upon southern chunks are not flattering.

TARIFF CONTROLS WOOL SITUATION.

Although wool prices have advanced all over the world, the high duty in the emergency tariff is given credit for a good deal of the advance in the United States. The future courses of values depends to no small extent, therefore, upon what is done in the permanent tariff.

Some wool has been contracted in the west at 27 cents for fine medium clips. The Boston market is quoted as follows: Wisconsin, Missouri and average New England, ½ blood, 36@37c; 3-8 blood, 32c. Scoured basis—Oregon—Eastern No. 1 staple, 95@98c; fine and fine medium combing, 90@92c; eastern clothing, 75@78c; valley No. 1, 82.1@82.5c. Territory—Fine staple, choice, $1@1.02; ½ blood combing, 88@90c; 3-8 blood combing, 63@66c; 1-4 blood combing, 53@56c; fine and fine medium clothing, 80@85c; fine and fine medium French, 90@95c.

WORLD'S WHEAT SITUATION.

The final official estimate upon the Canadian wheat crop reduced the yield to 301,000,000 bushels, which suggests 200,000,000 bushels for export. Based on the official returns which are contradicted by recent reports on farm holdings, the exportable surplus from the United States may run as high as 250,000,000 bushels. North America has already exported 311,000,000 bushels and the bulk of the remaining surplus is in Canada aand the Pacific coast states.

The Australian surplus is generally estimated by the grain trade at 80,000,000 bushels, although observers predict that it will fall below that amount. The last official estimate on the Argentine surplus, both old and new, is about 165,000,000 bushels. It is extremely doubtful, however, whether the carryover of old wheat in that country was as large as indicated, and most of the trade estimates upon the surplus range from 125,000,000 to 150,000,000 bushels. These four countries have a combined surplus based on the foregoing of about 650,000,000 to 680,000,000 bushels. World's import requirements are estimated at around 600,000,000 to 625,000,000 bushels. The adjustment of supply to demand looks much closer than it did three months ago when reports of large yields in Europe and larger surpluses in exporting countries than those shown above were first coming forward.

The world's surplus has been cut down enough by these revisions to make the prospective crop for 1922 a matter of great concern. The drought in the southwest is still unbroken and is most severe in some of the heaviest yielding counties of Kansas. With the approach of spring, weather conditions will be a paramount influence in determining the trend of prices.

In spite of heavy shipments to Europe, thus far in the crop year, the available supply in European markets is not large and small quantities are being taken from North America for prompt shipment, even though southern hemisphere wheat is lower in price.

The flour market has stagnated again as cuts in the price of bread have made bakers uneasy and they are unwilling to buy ahead.

The average decrease in the United States visible supply from February 1 to July 1 has been about 44,000,000 bushels. This is more than the total visible supply at the present time.

CORN MOVEMENT AT FLOOD TIDE.

Arrivals of corn at primary markets during the last two weeks totaled over 29,000,000 bushels and set a new record in trade annals and the present week promises to be still larger. Purchases for export have been less prominent, due in part to difficulty in obtaining ocean freight room, but American corn in Europe is still quoted considerably cheaper than Argentine, while the new Argentine crop, now near the roasting ear stage, is imperiled by dry weather and locusts.

OATS SITUATION GROWING STRONGER.

The strength of the oats market has been impaired somewhat by the existence of a large exportable surplus in Canada. In the final estimate, however, the Canadian yield was placed at 426,000,000 bushels, a decrease of 84,000,000 bushels. The total supply in United States and Canada at the beginning of the crop year was 400,000,000 bushels less than in 1920. Domestic demand for oats is improving and export bids have been in the market, although only a small quantity has been sold abroad.

Rye is selling at a discount of around 30 cents below wheat. This is a larger spread than usual, due to several factors.

CASH GRAIN MARKETS.

The range of cash grain prices for the week ending February 1 was as follows:

Chicago—Wheat—No. 2 red, $1.22@1.26; No. 3, $1.19@1.23; No. 2 hard, $1.15@1.18 1-2. Corn—No. 2 mixed, 49@50 1-4c; No. 3, 48@48 1-2c; No. 4, 46 3-4@47 1-2c; No. 2 yellow, 49@50c; No. 3, 48@49c; No. 2 white, 49 1-4@50c; No. 3, 48@48 3-4c; No. 4, 46 1-4@47 3-4c. Oats—No. 2 white, 36 1-2@38 1-2c; No. 3, 33 3-4@36 1-2c; No. 4, 32 1-2@34 1-2c. Rye—86c. Barley—52@63c.

FRESH ADVANCE IN CLOVER SEED.

Red clover seed prices advanced into new high ground for the season last week as a result of increased demand.

Toledo, per bushel—Prime red clover, $13.80@14; prime alsike, $11.95@12; prime timothy, $3.25@3.30.

GOOD BREAK IN FEEDS.

Both corn feeds and wheat feeds declined further last week, so that they are now $3 to $6 per ton cheaper than at the high point of the season in late December.

Chicago—Bran, $21.75; standard middlings, $21.25; flour middlings, $25; cottonseed meal, 43 per cent, $43.50; 36 per cent, $39.50; gluten feed, $30.65; hominy feed, $21; oil meal, $46; tankage, $52.50@55.

HAY MARKETS IRREGULAR.

Hay markets in the east have been dull with prices tending downward, but demand in the west has increased slightly and markets in that section are fairly firm. High freight rates tend to restrict the intermarket movement and thus to localize market conditions.

Chicago, No. 1 timothy, $21@22; No. 2, $18@19; No. 3, $14@15; No. 1 light clover mixed, $19@20; No. 1 clover, $16@17; No. 1 clover mixed, $17@18; sample and threshed hay, $10@15; No. 1 to choice alfalfa, $15@23; Nebraska and South Dakota prairie, $13@16; straw, rye, $14@15; oat, $12@13; wheat, $11@12.

EGG MARKETS FLUCTUATE WITH WEATHER.

Egg dealers everywhere expect an enormous output of eggs during the spring months and a further decline in prices. At present it is still necessary to draw on cold storage holdings, but within a few weeks the supply of fresh eggs will more than satisfy consumptive demand so that it will be necessary to put eggs into storage. When that time arrives, prices will be governed largely by the views of the trade as to prospective prices for storage eggs during the following fall and winter.

BUTTER MARKET IMPROVES.

Both the supply and the demand factors worked in the direction of high prices for butter during the last week. Cold weather has curtailed production and receipts at the principal markets already show the effects of the decrease in the make at country points. Pressure from foreign butter also has been less severe, although a little New Zealand butter arrived in the east.

CHEESE BUYING RESUMED.

Cheese buyers who remained out of the market expecting that a decline would occur were obliged to resume purchases toward the close of the week so that no loss in values of consequence occurred in distributing markets.

Prices for No. 1 American cheese on February 1 were: Chicago—Twins, 20@20 1-2c; S. daisies, 20 1-2@21 1-4c; D. daisies, 20@20 3-4c; longhorns, 20 1-2@21c; Young Americas, 20@20 1-2c.

FRUITS AND VEGETABLES.

The total movement of potatoes for the entire country up to the end of January was 162,341 cars. Ths is about 18,000 cars more than to the same date last year and about 31,000 cars less than for the entire season a year ago. The movement at the present time is running about 3000 cars per week. Prices remain fairly steady and northern sacked round whites are quoted in most wholesale markets at $2.25 to $2.40 per 100 pounds, although the Chicago carlot market is quoted at $1.80 to $1.95. Prices a year ago in distributing markets ranged from $1.15 to $1.65. Growers are receiving $1.10 for sacked Rurals in wagonloads at Colorado shipping points and $1 at Idaho shipping points.

Total shipments of apples for the entire country for the season up to January 21 were 73,087 carloads compared with 91,972 cars a year ago. About two-thirds of the movement has come from the boxed apple states. Prices upon barreled apples have averaged about 50 per cent higher than a year ago, while boxed apple prices have been running about the same as last year. Quotations on Baldwins A 2 1-2 range from $7 to $8 per barrel in wholesale markets while northwestern extra fancy Winesaps are quoted at $2.75 to $3.25.

(Continued on page twenty.)

Little Journeys to Market

Seven or eight years ago a branch of the U. S. department of agriculture was established to work on the problems of marketing farm products. This bureau has now grown to be one of the most prominent in the entire department. Within the last year it has been consolidated with the bureau of crop estimates and given its present name.

Besides the headquarters at Washington, the marketing work of the bureau requires branch offices or representatives at about 50 places over the United States. Its staff is engaged in the study of general questions such as the supply of and demand for specific farm products both in this country and abroad, methods of grading, standardizing, packing and shipping, transportation and storage, the nature of commercial transactions by which goods are moved from producer to consumer, methods of accounting, cooperative associations of farmers and every other aspect of our complex marketing machinery.

Besides its work as an investigator of market practice and problems, the bureau is engaged to some extent in the performance of specific services such as the distribution of market news, inspection of food products and regulation of market agencies.

Daily and weekly letters, sent free to any one who asks for them, which give unbiased information upon market conditions and quotations upon live stock, meats, dairy products, fruits and vegetables, peanuts and cotton, are issued from various offices. To a limited extent farmers can obtain information from the bureau by telegraph and radiogram. At one time during the war, the bureau had 17,000 miles of leased wires to carry on its market news work. The mileage has been cut down now, however, to less than 5000 miles.

Inspection work is confined to fruits and vegetables and dairy products. Shippers can call upon these inspectors for help aand thus be sure of the condition of their shipments upon arrival and can protect themselves against unjustifiable rejections.

The regulatory work consists in enforcing the United States grain standards act, the cotton futures act, the United States warehouse act and the standard container act.

Rochester Man Wins Pig

M. A. Hall's Letter First in Washington Farmer Contest

First prize—M. A. Hall, Rochester, Thurston county.

Second prize—Daniel I. Hopkins, St. John, Whitman county.

Third prize—L. P. Powers, Palouse, Whitman county.

The foregoing are winners in The Washington Farmer's prize letter contest on the subject of hogs as a farm byproduct in Washington.

Mr. Hall, who lives on a 40-acre logged-off farm near the little town of Rochester, in the southwestern portion of Thurston county, selected the Chester White as his choice breed. Consequently, The Washington Farmer has secured for him a purebred Chester White gilt from the herd of O. O. Phelps of Dryad, Lewis county. This gilt is bred to a purebred sire and will farrow this spring. She has already been expressed to her new owner to be delivered free of all charge to him.

Mr. Hall's letter is given below. The second and third prize letters will be printed in early issues. Mr. Hopkins receives $15 as a second prize, while Mr. Powers receives the third prize of $10.

THE FIRST PRIZE LETTER.

"It has been my experience that the hog as a farm byproduct is almost a necessity to the farmer if he doesn't wish any waste on his farm. And nowadays, when farming is a business, waste is out of the question. So I am giving you some of the reasons why I think every farm should have pigs as a farm byproduct.

"(1) Dairying pays better where there are pigs to consume the skimmed milk.

"(2) Keeping brood sows means quick returns, as there is always good sale for young pigs; for purebreds, higher prices.

"(3) There is much waste on every farm, such as garden truck, fallen fruits, grain left in the field after being cut, weeds, roots and a number of other things.

"(4) Then, often there is no market for some product that is raised, and you have the pigs to consume it. Sometimes it is more profitable to feed the hogs your grain, corn or potatoes than to sell. Without hogs you would have to let it go for what you could get.

"(5) The fertilizer is also valuable for gardens. One of the best gardens we ever raised was on a place where the hogs had run. We have never had one like it since, though using other fertilizer.

"(6) Hogs do not require so much attention as some other farm animals. Put on good pasture or a field where grain has grown, running water and not much else is needed. Neither do they need expensive buildings, as compared with the dairy barns and chicken houses, for winter quarters.

"(7) A farmer can always sell his pork and home-rendered lard to town people, thus having an income in the winter when not much else is coming in.

"(8) Then again, you know what kind of hams and bacon you get on your table when you raise them. The number of farmers that buy their meat is really surprising, some not raising enough, others none at all. See what prices they pay!

"(9) And pigs can be raised anywhere, whereas in some other kinds of farming certain things do better in different climates.

"(10) And, last, but not least, has not the pig given to the boy or girl been the means of many a one's becoming interested in and staying on the farm? Nothing appeals to a child but something of its very own. So, by all means, give your boy or girl a pig and let him or her see that as a farm byproduct they can not be beaten.

"So long as a farmer is raising hogs, let them be purebred. They require no more feed, grow bigger and, if sold for other purpose than home meat, bring better prices. M. A. HALL.

"Rochester, Wash., Route 2."

Lewis Farm Bureau Elects

When A. T. Flagg of Chehalis, formerly Lewis county agent and more recently Jersey breeder and president of the Lewis county farm bureau, refused at the third annual meeting of the bureau to serve another term O. O. Phelps of Dryad, formerly treasurer of the bureau, was elected to the post. T. H. Gray of Cowlitz was named vice president and Guy Alvord of Centralia secretary-treasurer. The executive committee for 1922 consists of H. W. Minkler, Winlock, dairying; J. T. Alexander, soils and crops; H. M. Prechel, Winlock, poultry; J. A. Scollard, Chehalis, marketing; Theo Albert, Chehalis, horticulture, and G. H. Tucker, Klaber, boys' and girls' clubs. Among those who addressed the meeting were President W. B. Armstrong of the state association, Mr. Prechel and C. L. Woodrum, the new field secretary.

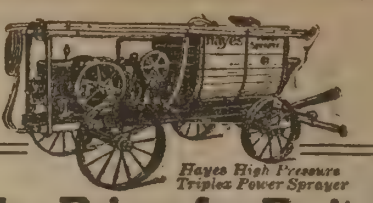
Eighty Grange Stores

There are 80 grange cooperative stores in the state of Washington, according to Albert S. Goss, manager of the associated grange warehouse company of Seattle. All of them are regular retail stores and some of them have been successfully managed many years. As a rule they sell to all who may wish to buy, but the members get dividends. Mr. Goss is deeply interested in cooperative buying and selling in general. He would like to see the national grange a cooperative clearing house, and, while he realizes the immensity of the proposition, he believes it a possibility.

DAIRYMEN ELECT OFFICERS.

At the annual meeting of the Snohomish county unit of the Washington United Dairy Associations at Everett, Wash., on January 26, a large number of the members attended and much enthusiasm was displayed. W. G. Grimm was reelected director from the Arlington district and will again be president and manager of the association. Mr. Beridon of the Security National bank; Mr. Baas, proprietor of the Frye hotel, Seattle, and the county agriculturist were the speakers. The financial statement showed that over 28,000,000 pounds of milk were handled during the year and that finances are in a satisfactory condition.

WALLA WALLA COUNTY SECRETARY.



The Walla Walla county farm bureau has elected Milo McIvor as its permanent paid secretary. He will have offices with County Agent Talley, where he began his work February 1. He is a graduate of the state college at Pullman.

TEST SAN JUAN COWS.

Dairymen of San Juan county are organizing a cow testing association for the purpose of raising the average production of all herds in the county. W. W. Henry, the newly appointed county agent, is helping start the new organization.

The Cover Page

The photograph on this week's issue of The Washington Farmer shows the head of Jupiter's Model, one of the well-known Belgian stallions of this state and of the Pacific northwest. This animal is now owned by the West Side Breeding company of Ellensburg, an organization made up of a number of farmers in that section. He was brought to the state by George R. Gouchnour of Sunnyside, who purchased him from C. R. Irvine of Ankeny, Iowa. He has been prominent on the show circuit in the Pacific northwest and has several grand champion ribbons to his credit. At 3 years of age he weighed 2300 pounds.

Nothing to Buy but the License

"Nothing to buy but the license" describes the complete equipment of the new Superior Chevrolet. It is not necessary to spend a dollar more than the new low purchase price of this car ($525 at Flint, Mich.) to make it complete—no "extras" to buy to make your car modern and capable of giving satisfactory service. This real economy is further evidenced after the purchase price through unusual mileage from gasoline, oil and tires, and fewer parts replacements.

Twenty to thirty miles to the gallon of gasoline

$525 *f.o.b. Flint*

From Ferns to Fertility

Honor Is Due Those Who Had the Nerve to Hew the Way

By H. J. LECHNER.

It was more than 30 years ago when the writer received his first distinct childhood impressions of the old homestead on the hills three miles from Washougal, Wash. It was truly a land of ferns (bracken) stumps, knolls and poor crops. It could hardly be otherwise than that father must work part of the time at his trade in order to supply the bare needs of the family. Here the soil was raw and red. It wasn't only a matter of removing the many, many stumps and subduing the ferns, but the fertility must be made, for the soil was poor; yes, poorer than the family.

Comparative nearness to market and a good lay of land were the two outstanding virtues of the place. Even then for years the trip to town meant at least a mile of mud for about half of each year.

Eight miles or more beyond lay another stretch of country, with the soil black and deep, apparently rich and perhaps a little easier to clear. The soil must have been better, because the ferns grew much taller. These settlers dubbed our community as "Greenhorn Mountain."

The tall ferns and the darker soil were the only causes for the dubbing on part of the then distant neighbors. Their long, muddy and steep way to market was decidedly against them.

My first impression of land under plow was 17 acres; now there are 65, which includes all available. Then there were still a larger number of stumps in the fields; now there are none in sight or within reach of the plow. Some of this land had 40 to 60 stumps per acre, many burned out, of course, but most of them taken out by the strong-arm-and-strong-back method, in the main by one who received little compensation for his effort. His ideal was a farm clear of stumps, of rocks, knolls and wet patches. To that end he worked as best he knew how, but had to leave when he was about three-fourths through. Live stock was not only inferior for the most part, but far from adequate to supply the much needed manure on the place.

Now the fern is gone; so are the poor dairy cows. Crops are far better, except the clover. Lack of lime and low humus content undoubtedly are the limiting factors. In the early days oats at 25 to 30 bushels per acre were common; now 45 to 55 bushels per acre are more common. There is still room for improvement in the dairy herd; the coming crop of young females points unmistakably toward improvement. But the greatest need is more fertility. The yield per acre of grain, cultivated crops and forage is too low. Clover and other legumes are not yet an assured success.

The Cost Too Great.

Looking back 30 or 40 years to the days of beginning here the advance doesn't fall short of being remarkable. The foundation built by our parents has been built well, though at too great a cost of human effort. As we see it now, much of that hard labor might have been avoided, but even then their pioneer efforts like those of all who chose such spots on which to make a home have gone largely uncompensated. The boys who now run the old home farm have done pretty well, beginning where their parents quit. Even if they had wanted to, they could not have used the exploitive method of farming. There was and is yet too little fertility to exploit. Five to seven years of consistent effort of fertility building will bring the yields per acre up to a point consistent with effort put forth. It might be done in less time with expenditure for commercial fertilizer to supplant the manure.

In times past the causes for discouragement have been many; they are not all gone yet. The labor income is yet too low.

In the early days it was conducive to peace of mind that farmers on such farms as these never figured in terms of labor income and interest on investment.

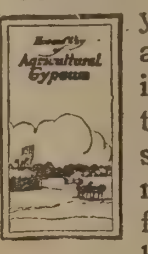
Nature needs much supplanting and modification on the hill farms of western Washington. We should honor and respect those with nerve to new the way. If they who are with us no more could speak again we undoubtedly would hear words of satisfaction when they learned that the good work started by them has gone on.

Isn't is tragic sometimes to find farms such as this one, so well started by those sturdy pioneers, not now in the hands of their sons and daughters, to carry on the good work started by their poorly-paid efforts?

Increase in Farm Values

To the Editor of The Washington Farmer: I saw the article by Mr. Nessly some time ago. Will say his figures were about right, but he forgot to state what made the farmers rich. The increase in farm values did the most of it. If a man bought land enough when it was cheap he was bound to make money. Of course, we made money most of the time, but we had several lean years, too, and I remember when a lean year came along we would remark, "Well, the price of land is still on the rise. We can stand it."

It seems that we are up against it and need to do something. The men that do the farming now did not make anything in the rise of the price of the land, and it seems a pity to break the pioneer in his old age; let somebody tell us what to do.



Los Angeles, Cal. L. C. MILLER.

LEASE RANCH FOR LAMBING.

Anderson Bros., Ellensburg sheepmen, have leased the Dan Goodman ranch in the lower Ahtanum and purchased his hay. They expect to take 4000 ewes there for February lambing.

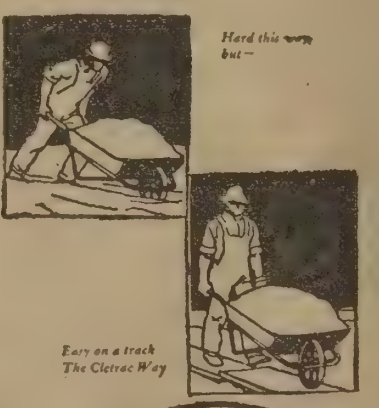
The New Model F
Cletrac
Reg. U.S. Pat. Off.
TANK-TYPE TRACTOR
$795
Complete, f. o. b. Factory

No matter how many tractors, or how many types of tractors, you have seen—you'll find the new Cletrac (Model F) astonishingly new and different. So simple in design, so easy to operate and maintain—it has such a decidedly all-year usefulness not ordinarily looked for in a tractor that it will actually cause you to figure tractors all over again.

The new Model F Cletrac is a real all-round tractor. It plows, discs, harrows, seeds, cultivates, harvests and does all kinds of belt work. And consider that it is only 31 inches wide, 50 inches high, 83 inches long and weighs only 1820 pounds.

Its capacity for work is enormous—plows 6 to 8 acres a day—discs 15 to 20—harrows 20 to 25—and withal it is so simple, care-free and accessible.



A few minutes of practice and you have mastered its operation. Every part is easily accessible. An automatic oiling system makes oil and grease cups unnecessary. Chrome steel—the toughest material obtainable—is used for all parts subject to wear, and it is equipped with a sturdy, powerful 4-cylinder *kerosene, distillate or gasoline* burning motor.

The new Model F Cletrac is without equal for day in and day out, all-job usefulness and dependability. For utility, quality and price it is an unprecedented value.

See your local Cletrac dealer or write our nearest office for full information.

THE CLEVELAND TRACTOR CO.
"Largest Producers of Tank-Type Tractors in the World"
19087 Euclid Ave., Cleveland

Pacific Coast Factory Branches
Los Angeles, Cal. San Francisco, Cal. Spokane, Wash.

1. Handles every farm job.
2. Plows 6 to 8 acres a day using any 2-bottom 12-inch plow.
3. Every part subject to wear constructed of chrome steel—weighs only 1820 lbs.
4. Automatically lubricated — no grease or oil cups.
5. Simple, care-free design—burns kerosene, distillate or gasoline.
6. Every working part quickly accessible.
7. Unprecedented value at $875 complete.

Model "F" Cletrac is made in four sizes: 31 inches wide, with 8 inch clearance; 41 inches wide, with either 8, 14, or 18 inch clearance.

Milk Problems Are Mutual

"We are doing all we can to make the state department of agriculture function with efficiency in the interests of the farmer," remarked E. L. French, director of the department, who addressed the joint get-together meeting of the Seattle Milk Shippers' association and the Seattle Milk Dealers' association recently.

"We believe that the farmer is in reality the city's biggest asset and any help that can be given him will benefit the consumers of food in the city.

"When the farmer is getting a fair price for his product there is more of a certainty that the city man will be prosperous," continued Mr. French. "When the farmer is forced to struggle along for a bare existence and take less than the cost of production for food products, there is always more or less reaction in the cities."

Charles E. Fisher of Thomas, president of the milk shippers' association, responded to the address and spoke a word in the interests of the producers. He told of the old impression the dairymen have held of the milk distributor in the past. They seemed to think, he said, that the dealers intentionally stirred up trouble for the farmers. The producers have become better acquainted with the distributors and they realize that the latter as well as the farmers have their troubles.

"A careful investigation of the farmer's costs and expenditures will show that those who are shipping milk to the Seattle market are not getting the cost of production for their product," said Mr. Fisher. "There are so many expenditures that are required by the city milk inspection department, such as the upkeep of sanitary equipment, a separate milkhouse and other requirements, all of which eat into the returns for the milk. The city dealer also has his problems, and it has been the aim of the association to work in harmony with the distributors in the hope of finding some means of bettering the conditions of both parties. When more perfect harmony can be maintained between the two groups there will be better conditions for the consumers as well as for the producers and the distributors."

Benefits Both Sides.

Upon hearing of the rumor that certain forces are making an effort to cause trouble for the milk shippers' association on the grounds of alleged violation of the Sherman anti-trust law, Mr. French wrote to one of the directors of the organization, saying that, in his opinion, all actions have been within the law.

"The association has been working for the betterment of both the consumer and the producer," he said. "I sincerely hope to see the association continue to prosper and stabilize the price of milk to the consumer and thereby give the producer a price that is nearer the cost of production."

C. B. Scollard, business manager of the association, told how he had made a survey of the milk prices in five different cities of the Pacific coast, which showed retail prices ranging from 12 to 15 cents per quart, the average being 13 1-2 cents. The price now being paid for bottled milk delivered in Seattle is 13 cents.

"This does not do justice to the situation," said Mr. Scollard, "because much of the milk sold in Seattle is handled by the retail stores. The price paid by consumers at these stores is 11 cents, which shows that Seattle consumers are not overcharged for retail milk."

Handles Much Milk.

In this connection the following excerpts from an article in the last issue of the state department of agriculture's monthly news letter are interesting:

"Among the more successful of the farmers' cooperative associations in this state the King County Milk Shippers' association takes high rank. It now furnishes 90 per cent of all of the milk distributed to consumers in the city of Seattle.

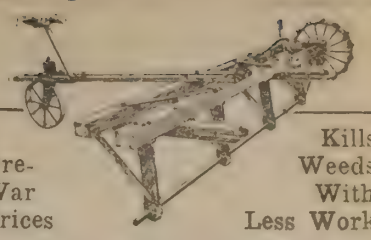
"The association was fortunate in its preliminary organization in securing on its directorate a number of good business men, approaching the problems presented with sound business sense. The first step taken was to get into close touch with the milk distributors of the city, with past prejudices laid asid and with a willingness to see the other man's side of the problems. The dealers accepted the overtures in the spirit that they were made. Both sides consulted amicably and laid their cards face up on the table. There was but slight difficulty in reaching harmony.

"The conferences reached an agreement on the price to be paid for milk, which was $2.75 per hundred weight, and the price to be charged the consumer, which was 12 cents a quart for milk delivered; no change at the time in the price to the consumer, but an advance of 25 cents a hundred in the price paid the producer. The dealers thought they would be able to absorb the advance by further economies and by gradually working out a scheme of zoning the city, through which they would avoid duplicating routes and in this manner reduce the delivery cost. This zoning system has worked out but partially, but a start has been made in that direction.

"With the commencement of the new year the dealers had another conference with the directors of the milk shippers and showed by their books that they were not making a fair profit at the price paid for milk. They put it up to the shippers whether they should advance the price of milk 1 cent to the consumers or reduce the price paid for milk to the farmers. There was no question on the book showing that the distributors were entitled to a larger return, for they are still paying the highest wages to all of their employees and those employees, as members of a strong union, would not stand for a cut in wages. The milk shippers hesitated about increasing the retail price, for fear that it might limit consumption and thus increase the amount of surplus milk, the disposal of which is always a problem, but finally gave their consent to the increase The dealers now charge 13 cents a quart and find that the public, understanding the situation, accepts the new price and does not decrease consumption."

HE SMOKES MEAT WITHOUT A FIRE

Washington Farmer Simply Applies Liquid Smoke—Flavor Is Improved and All Shrinkage Prevented.



Victor Hillhouse of Conconully, Wash., smokes meat by simply painting it with Wright's Smoke.

"I am convinced that it is the only system of smoking meat," says Mr. Hillhouse. "No more of the smoke house way for me. I wouldn't be without Wright's Smoke if it cost $10."

Thousands have found that the Wright method improves the flavor, keeps meat sweet and free from insects and prevents all shrinkage. Wright's Ham Pickle, mixed with salt, sugar-cures meat to perfection.

Get these genuine, guaranteed Wright Pure Food Products from your dealer.

Simply send your name to E. H. Wright Co., 850-C Broadway, Kansas City, Mo., for valuable illustrated book on expert methods of curing meat. Also learn how you can get a complete, highest-grade butchering set at lowest factory cost.—Adv.

"Cut The Price" SAYS MELOTTE

MELOTTE, the Edison of Europe, manufacturer of the greatest Cream Separator the world has ever known, announces a sweeping reduction in prices. Labor conditions in general together with tremendous re-building and re-organizing efforts put forth by this big man of Belgium has resulted in cutting production costs to the bone.

And right now *at this particular time* exchange rates are extremely favorable. Take advantage of this condition while it lasts. Get the most for your American dollar. Buy now and save money!

Before buying any separator find out how the Melotte has won 264 Grand and International Prizes and how, for efficiency of skimming, ease of turning, convenience of Operation and Durability—the Great Belgium Melotte has won every important European Contest. Find out why 500,000 Melotte Separators are in continuous use today.

Belgium Imported MELOTTE

From Belgium to The Pacific Coast by Water

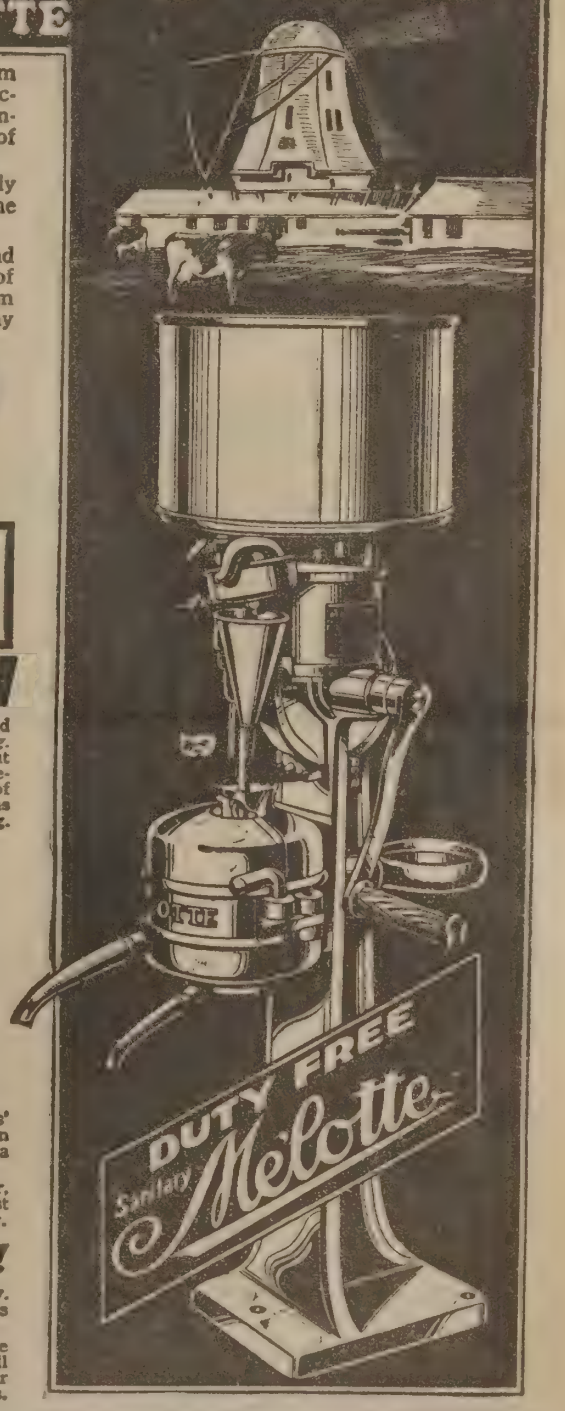
The increasing demand for Melotte Separators on the Pacific Coast has prompted us to open a Pacific Coast Office to receive direct shipments by water from Belgium. Because of this farmers and dairymen all over the West now have a wonderful opportunity to save money in the purchase of a Melotte Separator. A Melotte can now be ordered direct from our Pacific Coast Office, which means a saving in time to you of one to two weeks. You are losing money every day you are without it, so send the coupon to day to the Pacific Coast Office.

Self Balancing Bowl

The Belgium Melotte is the only single-bearing-bowl separator made. This patented bowl hangs from one frictionless ball bearing and spins like a top. It is *self-balancing*. It skims as perfectly after 15 years' use as when new. Positively can not ever get out of balance—cannot vibrate and thus cause cross currents which waste cream by remixing with the milk. The 600 lb. Melotte turns as easily as the 300 lb. machine of other makes. Spins for 25 minutes unless brake is applied. No other separator has or needs a brake. The Melotte bowl has solved the problem of perfect skimming.

$7.50 after 30 Days Free Trial

We will send an Imported Melotte Cream Separator direct to your farm on a 30 days' absolutely Free Trial—no deposits—no papers to sign—use it as if it were your own separator. Satisfy yourself that the porcelain bowl is as easy to clean as a china plate. Compare it—test it in every way.



When you are convinced the Melotte skims cleaner, turns easier, washes quicker, has one-half less tinware to clean, lasts longer than all others, then pay $7.50 as first payment and balance in small monthly payments until the separator is paid for.

Send No Money! — Easy Payments!

You're not to send one cent until you've used this great Belgium Melotte and have made up your mind it is the machine you want. Keep it for 30 days and use it just as if it were your own machine.

Compare the Melotte separator with any other—test them side by side. Then send your milk to the creamery. Let *them* prove which separator skims the cleanest.

After 30 days free trial, then send only the small sum of $7.50 and the balance in small monthly payments. The Melotte pays for itself from your increased cream checks.

Send This Coupon

Mail coupon for catalog giving full description of this wonderful cream separator. Read about the porcelain lined bowl. Easy to clean as a china plate. One half less tinware to clean. An exclusive Melotte feature. Other exclusive Melotte features described in full.

Don't buy any separator until you have investigated the Melotte. Take advantage of the 30 day free trial which Mr. Melotte has now authorized us to offer. Test the Melotte against all other separators and satisfy yourself as hundreds of American farmers have done that it is the world's greatest separator. The only separator that requires a brake. It is so easy to turn that it spins twenty-five minutes after you stop cranking. And remember it is guaranteed for 15 years. Don't wait—be sure to mail coupon TODAY!

The Cream Separator

By A. L. Haecker.

A good separator properly cared for will last many years and give excellent service.

The bulk of our creamery butter is produced from hand separator cream, and the care and operation of the hand separator on the farm is a vital factor in our national dairy industry. The hand separator is a machine which runs at a high rate of speed, which means that it is liable to get out of order and to cause some trouble if attention is neglected at the proper time. The hand separator is not a complicated machine, and with a little care can be kept in excellent running order.

During the winter months when the weather is cold, milk if allowed to stand will soon become chilled and is then more difficult to separate. Warm milk separates much better than cold. For this reason care should be taken to separate the milk as quickly as possible after it is drawn. Butter fat loss is much greater in the winter than in the summer. When the machine is not in good order and when the milk is cold the loss will often run as high as half a pound of butter fat in a hundred pounds of skim milk.

The bowl should run steady and at the proper speed. If the separator turns hard, a little kerosene in the running parts will soon cut out the thick gum or grease, and then by using a light oil the separator can be put in good shape. It is well to test the skim milk occasionally in order to determine whether or not fat is being lost.

Owing to severe foreign competition we can not expect such high prices this coming year for our butter fat, but we need not fear such competition if we use wise and approved methods in production and carefully watch the losses which are liable to occur in just such matters as are mentioned above. We are approaching a period of world competition in all lines of industry, and those who are careful and economical in their practice will survive and make a profit in their business.

The American cow keeper has many advantages over his foreign competitor. First of all he has a much cheaper and better ration which is the biggest expense connected with the dairy business. He has an excellent market and the best class of dairy cattle in the world. With good cows, good feeding methods and machinery in good running order, he will have no trouble in competing with foreign trade and finding a profit in his business.

Farmer-Owned Plants

The Dairymen's Cooperative association, Inc., has purchased 12 of the New York state plants of the Nestle's Food company, including a large condensery at Cooperstown, N. Y.

During the month of December the Cooperative association operated in the neighborhood of 80 plants.

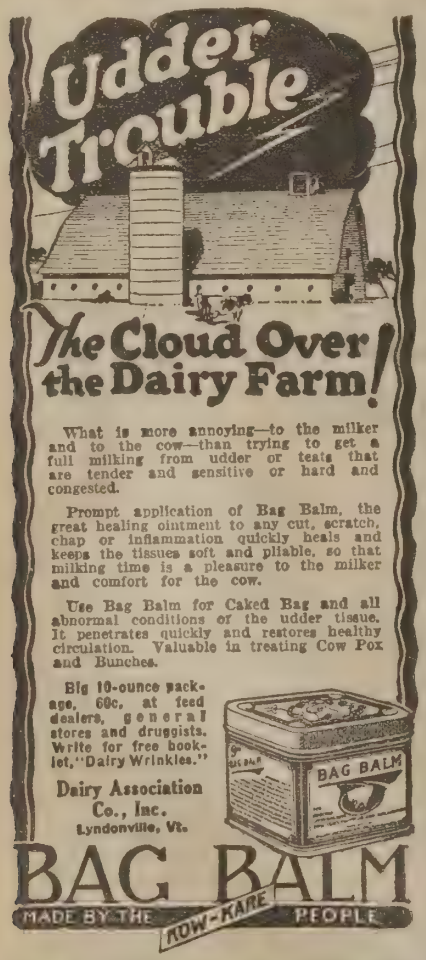
The Dairymen's league, Inc., which began to function in the fall of 1916, will cease on March 31, 1922, to act as sales agent of the milk produced by its members, and the great bulk of actual milk producers not already members of the cooperative association will contract to deliver their milk to the farmer-owned plants operated by the association. It was reported at the recent annual meeting of the Dairymen's league that 60,555 members had signed the cooperative contract on December 1, 1921. It is said at the cooperative association's Utica, N. Y., headquarters that contracts are coming in rapidly.

Cow Testing

Cow testing associations in Missouri are finding similar facts to those in the Pacific northwest. For instance, in half of the counties of that state it has been ascertained that the average cow produces 150 pounds of butterfat a year and that cows averaging that amount cleared only $48.94 above feed costs in the entire 12 months of 1921. The feed costs in their case was 36 cents per pound of butterfat and $1.64 per 100 pounds of milk. It has also been demonstrated that the feed costs decrease as production increases, so that the cows which average 350 pounds of butterfat per cow produce at a feed cost of only 19 cents a pound and milk at only $1 per hundred pounds. Their profit above feed costs was $132 per cow for the year. It was also found that the good cows returned $2.96 worth of products every $1 in feed consumed while the "state average" cows returned only $1.91 worth of products for the same amount of feed.

Sediment Method of Testing

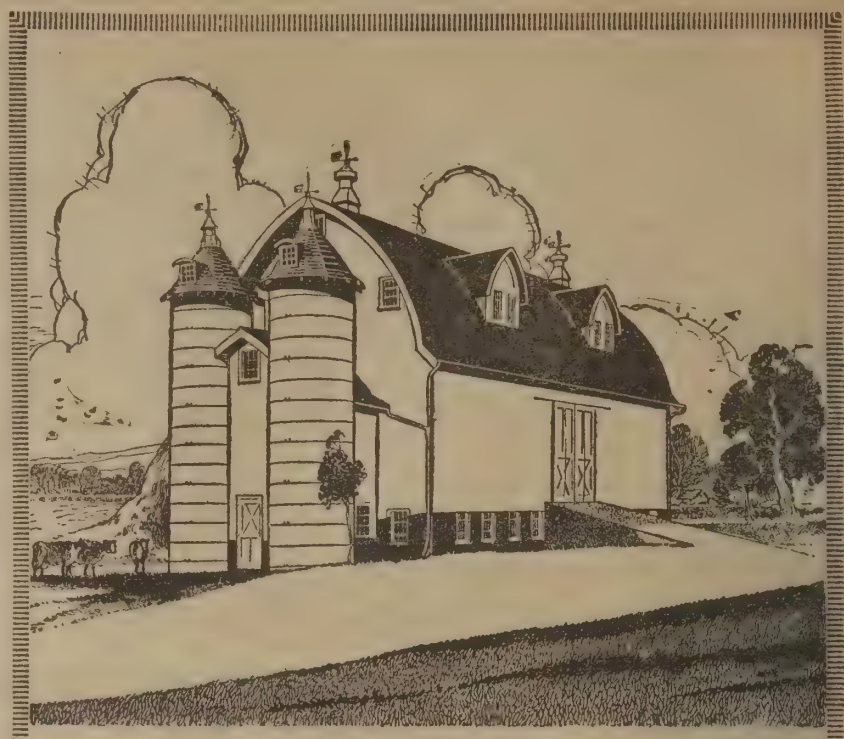
Dairymen of Washington are familiar with the method of testing the purity of milk, which is now in use throughout the state, known as the sediment method. When the inspector makes a visit to a dairy he takes samples of the last quart out of several cans as they come from the barn. The sample is drawn through a small disc of cotton which collects all the sediment. The disc can then be dried and kept as a record.



"The advantage of such a method is that it gives the producer a test that he can see," said L. W. Hanson, state dairy inspector, who is located at the Seattle office. "It means more to almost any dairyman than to have a lot of figures which show the number of bacteria to the cubic inch of milk. That is a test that requires a laboratory and is much more complicated and is, therefore, not as far-reaching as the one now in use."

The sediment test was started two years ago and is now in use by all factories that buy whole milk. The disc which shows an unusual amount of dirt is a very convincing argument. In almost every instance where the samples have shown much sediment the producer will make every possible effort to obtain a cleaner milk.

"This inspection is being carried on at the farms once each month for the purpose of giving the owner a check on his own barn methods," said Mr. Hanson. "We hope to get the work more systematized and establish the different grades of milk, so that the public will be willing to pay a higher price for a clean product than for one that contains dirt. If the dairyman can afford to keep pure-bred animals and rent high-priced land he can afford to practice more careful methods of producing his milk and receive a better price for it than the man who is less careful."



AN UNDESIRABLE FLAVOR.

Garlic, turnips, onions, cabbage and the like, if fed to the cows before milking, are likely to give the milk an undesirable flavor.

A Star "Gothic-Roof" Barn

Going to Build or Remodel a Barn?

If you are, you want to talk to us and we want to talk with you.

First of all, we'll give you, free of cost or obligation, complete blue prints (floor plan, elevations and outside drawings) and full detail of the barn you should have to fit your needs.

—and we'll show you how Star Barn Equipment pays for itself—how it cuts down the work—increases milk yield and keeps the herd healthier. And we'll prove what we say by the testimony of dairymen right in your section.

United States patents protect the exclusive features that put Star Barn Equipment in a class by itself—you will find these advantages in no other brand. For instance, the Unit System which enables you to add stalls as your herd grows—the Star Alignment Device which keeps bedding and stalls clean and lessens labor—the Star Curb Clamp which cuts down installation cost—these and many other features you would not be without are exclusive with Star.

In the Star Line, you'll find more than merely Steel Stalls and Stanchions—everything for the barn, inside and out, is there: Water Bowls, Pens, Ventilation Systems, Litter and Feed Carriers as well as Harvester Hay Tools, Cannon Ball Door Hangers, Hoghouse Equipment, Garage Door Fixtures and a world of other farm specialties.

Our 348-page bound catalog, profusely illustrated in colors, is free if you'll write for it and tell us when you're going to build a new barn or remodel your old one. Our Plan Department is at your service, free. Use the coupon for plans. Write for the catalog.

VETERINARY

By DR. S. B. NELSON.

Tuberculosis Test.—I would like to have my cow tested for tuberculosis. Who should I write to? J. R. L.
Reardan, Wash.

Write to the department of agriculture at Olympia, Wash., that you desire to have your cow tested for tuberculosis and they will do so at their very earliest convenience or opportunity.

Solution of Iodine—Please tell me what to do for a cow that acts as if she wanted to urinate whenever milked. She arches her back and starts straining as soon as one starts milking. She repeatedly takes the bull without getting with calf. C. W.
Colville, Wash.

Trying giving your cow a teaspoonful of Lugol's solution of iodine in her drinking water once daily. Regarding her second trouble in not getting with calf, that may be due to a cystic ovary, and probably is. I would suggest that you have your local veterinarian examine her and see if this is the case and offer you treatment accordingly.

Mountain Fever—I had a 4-year-old horse die lately. He seemed to be sick for about three months. His head started swelling and his eyes stuck out and after that he was poor. He had no discharge from the nose that I ever noticed. I have a sick mare that is poor and thin. Whenever she is worked blood comes from her mouth and nostrils. There has been quite a lot of sickness among horses here and several range horses have died. What is wrong? W. R.
La Fleur, Wash.

This animal is suffering, possibly, from what is known as mountain or swamp fever. This disease does not yield readily to treatment, but the following treatment has been recommended by some and is reported to give fairly good results. Give the mare from five to 10 grains of arsenic well mixed with her grain once daily for some time.

Wants Some Advice—I wouldlike a few words of advice concerning a valuable cow. She had her first calf at 2 years old and at 3 years old she had twins. Both calves died and I almost lost the cow. The veterinarian said she would never have another calf. She gave so much milk that I milked her for two years, then decided to sell her for beef and tried for six weeks to dry her up but failed, so started milking her again. She gave good milk for a year and a half longer. Last month I succeeded in drying her up with difficulty. She will be fresh in January. Should I doctor her before that time? She is in fine condition and is running on bunch grass pasture. MRS. O. T.
Anatone, Wash.

You certainly have a wonderful cow and she ought to be saved. If there is no anatomical malformations to the genative organs and birth passages, then there should be very little danger in losing either the calf or the cow. If, however, there is, naturally there may be some danger. See that the cow is not too fat and that the functions of the body are normal. There is no medicine you can give which will help her.

Give Raw Linseed Oil—I have a cow that seemed in good health until the other day, when she came in walking very slowly. She would not eat and stands humped up and grunts when she breathes. She is bloated a little on the left side. She also stopped giving milk. I gave her a pound of salts, but it did not do any good. I also have a cow that has been fresh two weeks. She has blisters on her teats that look like water blisters. I have been applying boric acid in water. READER.
Corfu, Wash.

In addition to the treatment that you have given your cow, I would suggest that you give her one pint of raw linseed oil in the morning and one pound of epsom salts in three quarts of water at night, for two days if necessary. Your second cow is suffering from cow pox. I think it would be well in addition to the treatment that you are using that you bathe the entire udder in a 2 per cent solution of creolin before and after milking and then you can apply the boracic acid dry, or still better, apply a little benzoated zinc oxide ointment to the scabs and blisters.

Passes Blood—I have a young heifer that for the last week has been passing blood after having been to stool. She is fed well and is kept in a warm place at night. J. T.
Winlock, Wash.

Give your heifer one teaspoonful of turpentine, well mixed in a pint of raw linseed oil, once daily.

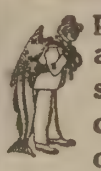
Bathe the Udder.—I have a cow that freshened a week ago and she does not come to her milk or else she holds it up. She has a big udder, but gives only three quarts of milk. Her udder is pliable and soft. I tried tubing the milk, but did not get any more. I feed carrots, bran and shorts and alfalfa. J. A. M.
Ione, Wash.

Wash the udder with fairly hot water before you milk her, then dry her very gently and massage the udder and teats until they get the full, slightly red appearance. I think this will give you better results than tubing her.

Contagious Abortion.—Can you give me a remedy for cows that have become barren, caused by contagious abortion?
Winthrop, Wash. R. M.

Use a small quantity of potassium permanganate in water as a douche.

Hog Won't Eat—I have a pig that has been sick for two weeks. He does not eat or drink anything and seems to be blind, and it seems hard for him to breathe. He goes with his head down to the ground and does not pay any attention to anything. W. McC.
Miles, Wash.



Keep your pig in a fairly comfortable place if he is not already. Coax him to eat. Use a little warm bran slop or mash. Give him three grains of quinine in a capsule twice daily. To give this to him, slip a noose around his nose and tie him up to a post so that he is in a sitting position and the rope goes up. He will pull back on the rope and open his mouth, at which time slip in the capsule and drench it down with a little water.

The right Fertilizer for your Crop

For over fifty years Swift & Company has steadily maintained a reputation of making each Swift product the best of its kind. This reputation stands back of each and every bag of Swift's Red Steer Fertilizer.

By years of research and experience Swift & Company knows the right fertilizer requirements of each crop.

Swift's Red Steer Orchard Dressing is especially recommended for orchards and small fruits. Swift's Red Steer Fertilizer analyzing 6% ammonia, 7% phosphoric acid and 8% potash is particularly suited for strawberries.

There is a brand of Swift's Red Steer Fertilizers made especially for each crop—truck, potatoes, hops, corn and other crops.

We can also supply nitrate of soda, sulphate of ammonia, acid phosphate, tankage, bone meal, etc.

See our local dealer for your requirements or write us.

Swift & Company, Dept. 521

Dealers who are now selling or could sell fertilizers should write for our proposition. Your territory may be open.

"IT PAYS TO USE THEM"

POULTRY

The following hints regarding the incubator, taken from Mrs. George Shoup's classes at the west Washington experiment station, will be read with much interest:

Three days is the limit for shipping baby chicks.

Turn the eggs at regular intervals; this will prevent crippled chicks.

If the incubator gets too hot the yolks of the eggs will harden and the growing chick can not absorb it as it should.

Study the instructions for your particular incubator and be sure to give the eggs the proper amount of moisure and ventilation.

Be sure your thermometer is dependable. It is much cheaper to test it out before the incubator is started than after a setting is ruined.

Select clean eggs for the incubator. Never wash eggs that are to be set. An egg that is slightly dirty is better than one that has been washed.

Egg Price Prospects

The marked drop in the price of eggs with little if any difference in the price paid by consumer has puzzled the producers. A representative of THE FARMER asked H. E. Wills, sales manager of the Seattle warehouse of the Washington Cooperative Egg and Poultry association about this. Mr. Wills was inclined to believe that the retailer will usually reduce prices to consumers as soon as he disposes of what case eggs he has on hand. "I never knew a retailer to oversell his eggs for any length of time," said Mr. Wills. "No one will begrudge him his regular five cents on each dozen he sells. The price fell so rapidly they could not dispose of the surplus they had on hand, for which they had paid a higher price."

As to the Washington Cooperative Egg and Poultry association Mr. Wills says: "We depend largely on shipping our Washington extras to the New York market. There is no reason to think that eggs will be cheap this spring, even though we do expect to put several thousand dozen into storage. There is a lot of trading being done with April storage eggs on the Chicago market and they are selling at 24 1-2 cents on a future basis, which shows that eggs are not going to be very cheap."

Mr. Wills adds that the association is planning to use a new storage process by warming the eggs and spraying with a specially heavy oil which is drawn into the pores of the eggs and, according to the promoters of this method, prevents any foul odor or bacteria from entering. This, it is claimed, will make a higher grade of storage eggs.

The association follows the New York market grade. The Washington extras are white eggs of an even size and those which have not been washed. The second grade includes a few washed eggs and is known as Washington firsts. Then there are seconds, thirds, fourths, pullets and undersized pullets.

Poultry Business Grows

"In seven years the value of the poultry production of Lewis county has increased from $4000 per annum to $1,300,000 in cash, paid by one firm," said H. G. Fowler, county agriculturist of Lewis county, with headquarters at Chehalis, Wash. "Around Winlock," Mr. Fowler continued, "100,000 hens are at work and contributing to the business of the town." The next largest poultry community in the county, Mr. Fowler said, is on Ford's prairie, adjacent to Centralia. The bulk of the shipments of the county are handled by the Washington Poultry and Egg association. At Winlock, during some seasons of the year, it is said, the output reaches a car a day, most of it going to eastern points. The poultry industry is second only to the dairy industry in Lewis county. At Winlock the Oregon Egg association has a unit and many eggs are handled through that agency. Poultry raisers there have purchased a warehouse with the expectation of increasing their business and to handle feed for their members, as well as poultry products. Some culling demonstrations were held during 1921 and Mr. Fowler plans for a great many during 1922. Interest in the demonstrations, he says, is keen and they are increasing the egg production and decreasing its cost.

Mash for Growing Rabbits

A mash consisting of two parts bran, two parts rolled barley, two parts ground oats and one part soy bean meal was used for feeding growing rabbits at the western Washington experiment station at Puyallup, Wash. The mash was fed twice each week alternating with the regular feed of rolled barley and alfalfa hay. The combination produced a gain of 15.6 pounds for the pen in 30 days. Salt was added at the rate of one ounce of salt to every five pounds of mash.

The second best pen was fed a combination of mash and rolled barley which was before them at all times. The gains were much smaller and cost more per pound of gain when the mash and salt were omitted. All pens had alfalfa hay before them at all times, and plenty of fresh water. The cost per pound of gain was found to vary from 6 1-2 to 7 3-4 cents.

The experiment was conducted by A. D. Norris, who is in charge of the rabbitry.

Day-Old Chicks for Beginners

H. H. Guth of Ronald, King county, Washington, advises the purchase of day-old chicks for a beginner in the poultry business. This method he considers preferable to buying pulletts as it gives the novice a broader experience. There is the need of more equipment, such as brooder houses, brooders and lamps, but any loss is much less than is the case with older birds. One also has the advantage of knowing what kind of growth the young birds have made during the brooding period. There is always a possibility of the pullets being stunted in growth, and this condition is harder to detect after the birds have attained the age of 3 or 4 months.

Mr. Guth has a flock composed of both Hollywood and Tancred strains and expects to hatch 50,000 chicks this spring and plans on keeping 8000 pullets for his own flock.

STEADY SAWING—AND GOODYEAR BELTS

"In my twenty years of farming, twelve years of it with different kinds of belting, the only belt I have ever had that would drive a saw resistlessly through two-foot box elder and ash is the Goodyear Klingtite Belt. The one I have, has been performing faultlessly for four years now."—J. W. CURTIS, Farmer, Little Sauk, Minnesota

"Say nothing, but saw wood" is the motto of the farmer who has a Goodyear Klingtite Belt. His belt troubles, from slippage and shrinkage and breakage, are over. He has a powerful, close clinging, long wearing belt.

The Goodyear Klingtite Belt is efficient and economical because it is specially designed and constructed for farm power service. It is built sturdily to stand the sudden stresses to which farm belts are subjected. It is built to endure changing weather conditions.

It needs no breaking in. It requires no belt dressing. It runs with a loose, free action that favors the engine bearings. It does not stretch or shrink so as to require frequent re-setting of the engine. It wears evenly, without a trace of ply separation, and lasts a long, long time.

You can get Goodyear Klingtite Belts from your Goodyear Dealer for any farm power drive. For further information about Goodyear Klingtite Belts write to The Goodyear Tire & Rubber Company, Akron, Ohio, or Los Angeles, Calif.

Young Orchards

Made to Pay Before They Bear

The question so often asked by amateur orchardists is: "How to make an orchard pay before it comes into bearing?" The answer to that question is all the more difficult because it depends upon several factors, chief of which are the man and the environment.

Generally vegetables are depended upon to utilize the land while the young trees are growing and while there is so much unoccupied space between the trees. Vegetable crops grown by persons who knew how to grow them and under favorable conditions have proven to be profitable, often yielding more in returns than the orchard yielded later. We give here an estimate, based not on guesses, but on actual yields from various crops grown by Alexander Miller, Yakima, Wash.:

Cucumbers, the ground heavily manured, returned per acre per annum	$1000
Tomatoes	1000
Asparagus	1500
Rhubarb	1500
Celery	1500
Horseradish	1500
Early potatoes	1500
Peas	500
Turnips	300

Of course, these estimates were made by one who knew how to grow vegetables and under conditions where the markets were better than they are now. However, if half that amount can be realized it is better than failing to utilize the spaces between the trees and having so much waste land. Then, too, early crops like peas and beans could be grown and late crops like turnips and cabbages could be grown on the same land the same year. Peas and beans being leguminous crops improve the soil by adding nitrogen, and if this is an object the later crops need not be grown and still the land be made to pay.

Alfalfa is often used as an intercrop, and, while it makes irrigation a little difficult, it yields profitable returns and improves the land by nitrogenizing the soil, aerating it, forming a large root system that lets the water down to greater depth than that of the tree roots. Nothing we have ever tried so improves a volcanic ash soil for apples and pears as alfalfa. After the trees are about 6 years old they are supposed to have reached the age of profitable bearing. The alfalfa may then be plowed up, the land cultivated for two or three years and the roots allowed to decay, to fertilize the soil. Then another crop could be sown, and if the hay is allowed to remain the land will be improved with every succeeding year.

There are many other crops that can be used for intercropping. Among them are onions, melons, cantaloups, squashes, pumpkins, potatoes, etc.

It is common practice to plant peaches as fillers for apples. The theory is that the peaches can be cut out when the apples need the space. This in practice has not proven as satisfactory as certain well chosen vegetables. However, unless a man knows how to care for vegetables he would better not attempt that plan, for he will fail unless he knows how to grow and to market them. G. L.

Fruit Shipments

Heavy tonnage of fruits and vegetables was shipped out of Walla Walla valley in 1921, according to annual report of J. B. Wiley, district horticulturist. The report shows 967 cars of apples, 375 cars of prunes and 10 cars of watermelons out of this county alone. Most of the other products are listed in terms of standard sized packages, making it impossible to make carload comparisons.

The report shows 19 carloads of apples were made into byproducts.

The Snake river district of Asotin, Garfield and Whitman counties produced 724 carloads of prunes and plums, 55 carloads of peaches, 12 cars of pears, 72 of cherries and 42 of apples. Heretofore the Walla Walla valley has been regarded as the principal prune center, but Wiley's report shows that the district along the Snake river produces more than twice as much prunes.

These figures represent only freight shipments, not express.

How to Start Rhubarb

How is the best way to start rhubarb? What varitty is the best? Is there a dependable market for it at the canneries?
Ceres, Wash. MRS. B. B.

Rhubarb is propagated by dividing the plants and planting the pieces. Each piece (set) should have one or two buds from which the new leaves develop. A plant a foot in diameter should produce 10 or 12 good sets. The "Victoria" is the most commonly grown variety in western Washington. Canneries usually pay about $20 or $25 a ton for rhubarb. There is a limited demand at from 4 cents to 6 cents a pound, for fresh rhubarb, before most fruits are on the market, and a special select trade for winter forced rhubarb. A good field of rhubarb should produce from 10 to 15 tons per acre annually.
J. L. STAHL,
Western Washington Experiment Station.

Trees Need Spraying

The apple trees in my orchard are covered with moss, oyster shell scale and red spider. How can I get rid of them?
Silverdale, Wash. F. W.

To rid your trees of the above pests spray them at any time now with the lime sulphur solution, one gallon of the concentrated liquid to 8 or 10 gallons of water. This must be put on before the buds come out. Where trees are sprayed with the above so-called dormant spray, or with the applications of lime sulphur in the summer for the control of scab, the above pests are also checked by those applications. ARTHUR FRANK,
Western Washington Experiment Station.

CROPS UNDER GLASS.

Garden crops are seldom considered hothouse crops, but there are times when certain vegetables can be raised to advantage under glass, in the Puget Sound district, even during the late spring and summer months. The reason is because of the excessively cool nights and heavy fog that occur in this section.

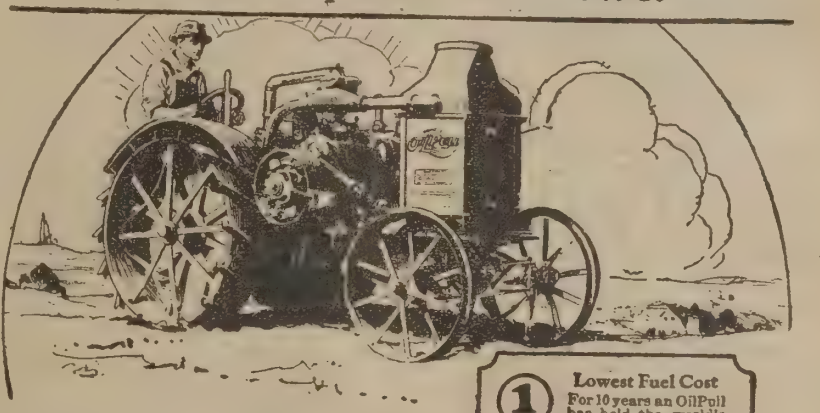
At the Haas greenhouses, which are located near Bellevue, there are 20,000 square feet under glass, all of which is used for the raising of garden crops. Up until the present time the proprietors have specialized in the growing of cucumbers and tomatoes, getting both crops onto the market long before the outside gardens are planted.

Save the bird in hand—
Others may be hard to catch

With enough money, enough time and enough luck, a man may get back the health he has lost—or part of it.

It takes patience, too. And then there may be no success, or only a little.

It's better to save what you have than hunt for what you've lost—as the most successful health-restorers will tell you.



Much of the loss of health is due to faulty, careless diet. Wrong meals at all times and right meals at wrong times load the long-suffering digestive organs with elements of destruction, or starve the tissues and glands of needed elements.

Grape-Nuts is a delicious cereal food which has the qualities of scientific nutrition. It supplies the full richness of those splendid food grains, wheat and malted barley, together with the vital mineral elements, so often lacking from foods. Served with cream or good milk, Grape-Nuts gives complete nourishment without over-loading the stomach.

A splendid thought for breakfast or lunch, for those who would keep health—

Grape-Nuts—the Body Builder
"There's a Reason"

OILPULL
"The Cheapest Farm Power"

Four Things
to Look For When
You Buy a Tractor

The four vitally important items shown here are absolutely essential to cheap farm power. Farmers have been demanding them for years. OilPull is "the cheapest farm power," because it has all four.

1. **Lowest Fuel Cost** — For 10 years an OilPull has held the world's official record for low fuel cost.
2. **Lowest Upkeep Cost** — Investigation of many OilPulls shows average yearly repair expense of only half the national average found by the Government experts.
3. **Longest Average Life** — Hundreds of the first OilPulls have passed the 10-year mark and are still giving good service.
4. **Reasonable Price** — OilPull Tractors are always fairly priced.

Read the remarkable statements given above carefully. They are the points you want to demand in your tractor to assure profitable service.

TRIPLE HEAT CONTROL—the Important Factor

The outstanding reason for the great success of OilPull Tractors is TRIPLE HEAT CONTROL—the only system that keeps the temperatures of the motor at the exact right point for greatest efficiency on the least fuel—at all times. The only system by means of which the MOTOR GROWS COOLER AS THE LOAD GROWS HEAVIER. Overheating is unknown. Freezing is impossible. Positively solves the problem of getting the power out of cheap kerosene. Makes possible an unqualified written guarantee to burn kerosene successfully at all loads and under all conditions, up to its rated brake horse power.

The local Advance-Rumely dealer will gladly demonstrate the OilPull. In the meantime, we invite you to write for a copy of the catalog and our special booklet on Triple Heat Control.

Advance-Rumely Thresher Co., Inc.
Spokane, Wash. Portland, Ore. Pocatello, Idaho

"The Advance-Rumely line includes kerosene tractors, steam engines, grain and rice threshers, alfalfa and clover hullers, and farm trucks"

Oil Light Beats Electric or Gas

Burns 94% Air

A new oil lamp that gives an amazingly brilliant, soft, white light, even better than gas or electricity, has been tested by the U. S. government and 35 leading universities and found to be superior to 10 ordinary oil lamps. It burns without odor, smoke or noise—no pumping up, is simple, clean, safe. Burns 94% air and 6% common kerosene (coal oil).

The inventor, W. W. Johnson, 31 N. Fifth St., Portland, Ore., is offering to send a lamp on 10 days' FREE trial, or even to give one FREE to the first user in each locality who will help him introduce it. Write him today for full particulars. Also ask him to explain how you can get the agency, and without experience or money make $250 to $500 per month.—Adv.

Farm Lands for Sale

Read our "Want Ad" Page for good offers this week.

FARMERS' WANT ADS

This is the farmers' "want," "sale" and "exchange" department for small advertisements of farmers, including live stock and poultry.

Advertising rates for ads running 1 to 3 times, 10c per word per insertion, with a special rate to Farmer subscribers, as follows: Ads running 4 to 12 times, 9c per word per insertion; ads running 13 times or more, 8c per word per insertion.

All commercial and land advertising 10 cents per word each insertion. Open also to nonsubscribers.

In using these columns advertisers must observe: (1) No advertisements will be inserted for less than $1.00. (2) Every word, number and initial, including name and address, must be paid for. (3) New advertisements, changes of copy or cancellations must reach general office, Spokane, Wash., 10 days in advance of publication date. (4) Cash must accompany order.

Above rates include insertion in The Washington Farmer, The Idaho Farmer and The Oregon Farmer, which constitute the Pacific Northwest Farm Trio, 45 Review Building, Spokane, Wash.

POULTRY (Baby Chicks) 174

"WHAT THEY SAY."—"YESTERLAID EGG Ranch, Kent, Wash. Dear Sir:—Is there any chance for 1200 chicks the 1st of April? Well pleased with your pullets last year. They laid between 50 per cent and 60 per cent since last October." Jack Sheridan, Greenacres, Wash. "Dear Sir: I bought 400 chicks of you last spring and will say they were the best layers I have. I would like to buy between 400 and 500 more next month. What time in February could I get them?" Mrs. Leonard Fossett, Dungeness, Wash. "Jan. 6th, 1922, Dear Sir: Enclosed find $7.50 as 15 per cent payment on 250 chicks. Our neighbor, Mr. Wood, got some from you last year and they certainly are good layers." William Stark, Coeur d'Alene, Idaho. We hatch 12,000 chicks every 5 days from our own wonderful trap nested White Leghorns. All of our 8000 laying hens are trap nested and bred to lay. We have 40 acres devoted exclusively to White Leghorns, all with wonderful egg records. More than 50,000 chicks already sold, but we still have good dates left if you book your orders at once. Send for price list and dates you would like chicks shipped. Yesterlaid Egg Ranch, Kent, Wash.

WHITE LEGHORN AND ILL-A-HEE BARRED Rock chicks—Buy chicks this year that live and grow and are bred to lay. Butler White Leghorns and Ill-a-hee Barred Rocks are known for high average flock production. Before ordering elsewhere, write for circular telling how our breeding methods produce 200 flocks for our customers. All stock trap nested and pedigreed. Also get our prices on breeding cockerels and hatching eggs for each breed. Address Butler Poultry Farms, or Ill-a-hee Poultry Farm, Jennigs Lodge, Ore.

"FRESHLAID" WHITE LEGHORN CHICKS have the qualities you want; vigor and scientific breeding for the heaviest egg production; every "Freshlaid" male is from a high record hen. Freshlaid Farm is one of the largest and oldest chick plants in the Inland Empire. There is a real demand for "Freshlaid" chicks, especially from our old customers. We are sold out until May 1. Write at once if you wish May chicks. May chicks make ideal winter layers. Catalog. Freshlaid Farm, Colfax, Wash.

THE PROGRESSIVE HATCHERY — BABY chicks from vigorous range bred stock; trapnested S. C. White Leghorns, $20 per 100; selected S. C. White Leghorns, $18 per 100; S. C. R. I. Reds and Barred Rocks, $25 per 100; safe delivery of live, vigorous chicks, full number ordered; absolutely guaranteed. Send for circular of special matings and hatching eggs. 1534 East 12th North, Portland, Ore.

CRYSTAL WHITE POULTRY FARM—BREEDers of S. C. White Leghorns; baby chicks a specialty; hatched from eggs laid by our great egg producers. Price, $17 per 100; $160 per 1000. Order early to get the best dates. Send for circulars. Mr. and Mrs. Jno. Eborall, McMinnville, Ore. Box 33.

BABY CHICKS HATCHED IN PETALUMA INcubators are a superior class; strong, vigorous, sturdy, grow rapidly, lay early. Buy chicks from hatcheries using Petaluma incubators. You will find one near you. If not, write us. Catalog free. Petaluma Electric Incubator Co., Petaluma, Cal.

WHITE LEGHORN BABY CHICKS FROM heaviest laying stock. Booking orders now for spring, 1922, delivery. Safe arrival live, vigorous chicks guaranteed. Prices on request. Reliable since 1898. Must Hatch Incubator Co., 445 Seventh st., Petaluma, Cal.

TRACK'S END

By HAYDEN CARRUTH

A Stirring Story of Adventure

(Copyright by Harper & Bros.)

CHAPTER XIV.

I have an exciting hunt and get some game, which I bring home with a vast deal of labor, only to lose part of it in a startling manner: together with a dream and an awakening.

I had not had my eyes to the loophole 10 seconds when I found out something more about the coming invaders; what I had taken for cattle were buffaloes, a thing which surprised me very much, for they were even then extremely scarce. There were about a dozen of them, and they were coming on all in a bunch and thowing up the snow like a locomotive.

I saw that the buffaloes would follow the swell of ground and that it would bring them in close to town, and perhaps right across the square between the stores and the depot. But I did not believe that they could ever flounder through the drifts to the south and east, so it seemed as if the hunters would overtake them so near that they would probably stay and again take possession of the town. I think I should rather have seen the outlaws coming. I decided to fire at them and see if I could not drive them off. But it was not necessary. I think some of them must have been the same Indians that called on me Christmas day, and went away so suddenly, without stopping to say goodby.

I am sure of this, because when still a good half mile from town they stopped and began circling around, and waving their guns in the air, and making all sorts of strange motions. I suppose they were trying to drive away the evil spirit which they thought was in the place, and which I had had in the pumpkin lantern, and which had also been in Fitzsimmons' barrel. Then one of them who had been sitting on his horse rode a little forward and got off, and I could see a thin ribbon of blue smoke arising. I suppose he was the medicine man of the tribe making medicine to frighten the evil spirit; or rather, perhaps, to get up their own courage to face it. This kept up for half an hour. The buffaloes in the meantime had walked slowly along till they were not much more than a hundred yards away, and stood looking at the houses in the greatest wonder; the first they had ever seen, it is safe to say.

But it appeared that the Indian's medicine did not work any better than white men's medicine sometimes does, for they began very slowly to go back the way they had come. I could see them stop often and circle around and, I suppose, hold long talks, but they could not get up their courage to venture closer to the place where the awful spirit with the flaming eyes and the fiery teeth had looked down upon them and chased them with his terrible limping gait. At last they passed entirely out of sight.

My next thought was, of course, to try getting a buffalo myself, since I needed fresh meat as badly as the Indians, or worse. But by this time they had drawn back some distance and were out of range for any but a very good marksman, a thing which I was not. I should have to follow them, which I decided to do quick as a flash. Through the tunnel I rushed and out to the barn. In another minute I brought out Dick saddled and bridled. He had not been beyond a small yard for a month. He began to jump like a whirlwind. How I ever got on with my gun I don't know, but I think I must have seized the horn of the saddle and hung to it like a dog to a root and some of his jumps must have thrown me up so high that I came down in the saddle. Anyhow, I found myself riding away straight south as if I were on a streak of chain lightning.

This would not do, so I pulled with all my strength and tried to turn him. I might as well have tried to turn a steamboat by saying "haw!" and "gee!" to it. But the pulling on the big curb-bit made him mad and he stopped and began to buck. I hung on with all hands and legs, and at last he bucked his head around in the right direction, and then I yelled at him, making the most outlandish noise I could, and he started across the square and straight for the buffaloes as if he had been shot out of a gun.

When Dick saw the buffaloes I think he knew what was up, because he began to act more reasonable. They saw me coming and stopped and looked back surprised. I thought they were going to wait, but they soon galloped on. I saw I must go to one side if I wished to get within range, and turned to the right. In a few minutes I came up abreast of them and within easy range, but I soon found that though I could guide my horse I could not stop him, pull as hard as I might. I could not even make him stop and buck again. He was going straight toward the north pole, and I thought it would not take him long to get there. One way to stop him came to me. It was a rash plan, but I saw no other.

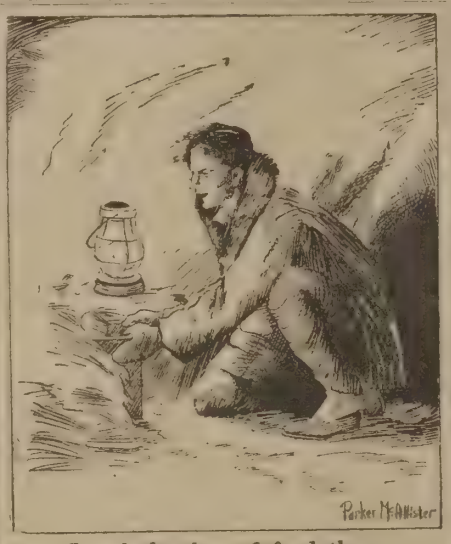
Ahead and a little more to the right was a mighty bank of snow in the lee of a little knoll. It sloped up gradually and did not look dangerous. I turned him full into it. At the third jump he was down to his chin, and I had gone on over his head. When at last I struck I went down a good ways beyond my chin; in fact, my chin went down first, and if any part of me was in sight it must have been my heels. All I knew was that I was hanging to my gun as if it were as necessary as my head.

Why the breath of life was not knocked out of me I don't know, but it wasn't, and I kicked and thrashed about till I got my head and shoulders to the surface, with a peck of snow down the back of my neck. I looked for the buffaloes, and there they stood in blank astonishment, wondering, I guess, if I always got off of a horse that way. I ran my sleeve along the barrel of my rifle, rested it over a lump of frozen snow and fired at the nearest one, which was standing quartering to me. I saw the ball plow up the snow beyond and to the left. They all started on. As mine turned his side square to me I fired again. He went down with a mighty flounder. The others rushed away. I waded nearer and finished him with one more shot.

Dick was still aground in the snow, snorting like a steam engine, but by the time I had tramped the drift down and got him out he was over his nonsense and carried me back to the barn quite decently. I was all for skinning and dressing my buffalo. To Taggart's I went and got some good sharp knives and, taking Kaiser and the sled, started back. I don't think I ever worked so hard in my life as I did at that job. It was not very cold, which was one good thing. Every minute I expected the wolves, and I did not have long to wait, either. Before 3 o'clock they came howling along the trail the buffaloes had made, and I had to stop and fire at them every few minutes to keep them off. I am sure they were not so hungry as usual or I never could have kept them back at all. Twice I killed one when I shot, but I dared not go up and get them, and they were soon devoured by the others. The pack kept growing larger as others came over from the timber north of the butte.

At last I got off the hide and loaded it on the sled. I wanted to take all of the meat, but it made too big a load, and I had to be satisfied with two quarters. I even had to give up taking the head, which was a fine large specimen. A little after 4 o'clock, as the sun began to sink low, the wolves became bolder, and I knew it was not safe to stay longer. The load was more than Kaiser could pull, so I saw I must take hold and help him. I fired five or six shots at the wolves as fast as I could pump them up, seized the rope and off we went. We were not 10 rods away when the whole pack was upon the carcass fighting and tearing at it. They kept up the hideous battle all night and howled so much that it seemed as if their throats must be worn raw.

Once back home I set at my regular work, tired enough. But the fires were all low and I expected a day or two more of good weather, and the ease with which the Indians and buffaloes had got down from the north made me fear more than ever the coming of the outlaws from the west. I still had little hope of ever getting out of the place alive, but I could only work on and do all I could for my safety.



I laid the quarters of meat on some boxes in the shed and bolted the door. I was so tired I think I must have slept sounder that night than for a long time. In the morning I found that the shed door had been forced open, one of the bolts being torn off and the other one broken. Even the hinges were bent. A big piece of the best part of each quarter was gone. I could not tell if it had been torn off or haggled off with a dull knife. It might even have been gnawed off; I could not tell.

I looked for tracks of the robber with, as the saying is, my heart in my mouth, but to no purpose. Although it had neither snowed nor blown during the night, a deep layer of frost, like feathers, made out of the thinnest ice, had settled everywhere toward morning and I could find nothing.

That this new reminder of my unknown enemy brought on another attack of terror I need hardly say, but it was daylight and I conquered it better. The worst feeling I had to fight with was that whatever the thing was, it might be looking at me as I moved about town. I thought I saw eyes peering at me, sometimes of one kind, sometimes of another, out of every window, through every crack, over every roof, around every corner, from behind every chimney; even the tops of the freshly made snowbanks, blown over like hoods, were not free from them, and when I looked out on the prairie I expected to see something coming to catch me. I could scarce tell if I were more afraid on top of the drifts or under them in my tunnels, for here I constantly expected to meet something, or look back and see eyes. I think the loneliness and the strain of the expected robbers must have half turned my mind. If I had known what to look for and dread I think I should not have cared so much, but, not knowing, I imagined everything and became more terrifed about I knew not what than were the Indians at my pumpkin lantern. Sometimes I was sorry that I had driven the Indians away, and there were times when I thought I should be glad to have the Pike gang come, just for company.

Three days after the buffalo hunt, in the night, I thought the gang had come indeed. I was not more frightened at any time while I was at Track's End than I was that night. I had gone to bed as usual in the empty building, taking in my drawbridge and closing both windows behind me. The northwest wind had died away at sundown, and the night was still and the sky becoming cloudy. I looked for an east wind the next day and probably snow later.

What hour I woke up I knew not, but it must have been about midnight. I know I awoke gradually, because I had a long dream before doing so. I thought a giant was shouting at me from a grove of green trees on a hillside; it kept up for a long time, deep, hoarse shouts which fairly shook the earth; I could not see him, but seemed to know what he was. I was not frightened, but stood in a meadow listen-

I cached a box of food there.

ing. Then there was a crash of a tree falling on the hillside, and the giant's shouts came twice as loud, and I awoke and fought the bedclothes off my head and knew it was Kaiser barking.

At first this did not startle me, since he often barked in the hotel at night, sometimes at the wolves and other times, I had reason to think, at the thing which prowled in the night. The next instant I realized that his barks were much louder and that he was nearer. I started up and saw that a dull, flickering light was coming through the cracks in the boards over the window and moving on the wall. I thought of northern lights, then saw that it was on the north wall and not on the south. I leaped to the window and peeped out a crack and saw that there was a great fire somewhere; the snow was lit up like day almost, and I could see black cinders floating above the barn.

I got into such of my clothes as I had taken off and rushed to the side window. Here the light did not come much, but I could see Kaiser standing with his feet on the hotel windowsill and his head and shoulders out the window. He had smashed through the glass, as he had that day when the wolves came. Not once did he stop his terrific barking.

I pushed up my window and seized the drawbridge. I started to put it across, as I had done so many times before, but I was so excited and in such a foolish fright it slipped out of my hands and fell between the buildings. I stood a full minute unable to move. The lower part of the hotel window was divided into two panes, and Kaiser had broken one of them. I could see that he had cut himself, and I was afraid of doing likewise. But there was no other way to get out. I put on my mittens and got out of my window, clinging to the upper sash and standing on the outside sill. Then, with a prodigious step, I landed on the other sill, seized the opening regardless of the jagged glass, crouched down and plunged into the room head first. Kaiser had drawn back as he saw me coming, but as I shot into the room he bounded in front of me, and we rolled over together there on the floor in the darkness. I was half dazed, but knew I smelled smoke and heard the crackling of a great fire.

CHAPTER XV.

The mysterious fire, and something further about my wretched state of terror: with an account of my great system of tunnels and famous fire stronghold.

Once I said, when I told of how I found myself helpless at Bill Mountain's, that I thought Kaiser the best dog that ever lived. here I may say I know it. Though he got in my way and made me turn a few somersets in the dark, he may have saved Track's End from destruction.

When I got to my feet I felt my way across the room and through the hall to a room in the southeast corner of the hotel, where there was a loophole in the boards over the windows. Through this I saw that the livery stable was a pillar of fire.

How long I stood there at the loophole staring I know not; I think I did not move or scarcely breathe. It was a large building, the second story packed with hay, and below there were stored many wagons, some farm machinery and a quantity of lumber and building material, all things that would burn well. Everything was ablaze, the roof fell in as I looked, and the flames and sparks and smoke reached up like a vast column, it seemed to the very clouds.

At last I saw it was no time for idleness, so I turned away and went downstairs. As I started to pull open the back door it came to me suddenly that Pike and his men must have come. I reached behind the desk and got Sour's Winchester. Then I went out, leaving Kaiser behind, much to his disappointment. The heat struck my face like a blast from a furnace, and the light dazzled my eyes. I crept very cautiously over the snowbank behind Hawkey's and Taggert's till I came to Fitzsimmons'. Here the heat almost scorched my face, and I saw that the paint on the building was beginning to blister. I peered everywhere for signs of the men, but saw nothing. I crept around the corner of the building and looked across the square, but there was no sign of human life. I expected nothing less than that the whole town would be burned up, but I was helpless.

Finally I ran across the square and, leaving my rifle on the ground, scrambled up the windmill tower. It was truly a beautiful sight, as I knew, despite my fears. The sky was covered with thick, low-hanging clouds and, save for the fire, the night was pitch-dark. The whole town lay below me, half lit up like day, half inky shadows. Even at this distance I could feel the heat, and the sullen roar and crackling of the flames never stopped. But though I shaded my eyes and peered everywhere among the houses and across the prairie, I could make out no living thing.

Cinders were falling all over town, but there seemed to be little fire left in them when they alighted. The roofs were mostly flat and covered with tin, though the depot, the Headquarters barn and a few others were of shingles. Suddenly a cinder unusually large fell on the depot roof and lay there blazing. I hurried down the tower, and hauled a ladder which I had noticed the day the Indians came from beneath the platform, thinking I might climb up and put out the fire with snow. There was no water to be had anywhere except from the well back of the hotel. But the flame died out, and I dragged the ladder across the square. It occurred to me that it would be no great loss to me should the depot burn. I could not know the good thing that was later to come out of it.

It was so hot that I could not go behind Fitzsimmons', so I dragged my ladder across the drifts of the street and through between the hotel and Hawkey's. When I came out in the rear of these I was startled to find a small blaze on the barn roof. I hurried to the barn with my ladder, got it in place, and then with pails of water from the well I managed to put it out. Once more it caught, and once the roof of the shed where Pike shot Allenham blazed up, but I dashed water on the fires and saved both buildings.

At last the stable fire began to die down. The current of air from the northeast had become stronger, and the column of smoke was swaying more and more to the southwest. Just as daylight began to appear in the east the last remaining timber of the stable fell, and, though there was a great cloud of sparks and still much heat, I saw that unless a strong east wind should spring up there was no longer danger that the town would be consumed. By this time I was cold and stiff, my face scorched by the fire, and my clothes frozen with the water from the pailfuls I had carried, I went to the hotel.

Kaiser was so glad to see me that he reared up and put his forepaws on my shoulders. I was patting and praising him, when suddenly the question, What caused the fire? flashed into my mind. There had been no trace of Pike. From the windmill tower I had been unable to see any trail leading from the way he would come. There was no explanation except that it must have been caused by the same thing that had made me so much other trouble. Till it was broad daylight I paced up and down the office floor, unable to stop. For two days I thought of

little else, and brooded on it till I was half sick.

It seems to me as I look back at it that every time I got fairly desperate through lonesomeness or pure fright I went and dug a snow tunnel. I was as bad as a mole for tunnels, and I meant to tell about my system before this, but so many things keep popping into mind, what with my memory and with the old hotel register and the letters to my mother lying spread out before me, that I have not once got around to mention any of them except the first, which connected the hotel and the bank, directly across the street. I was so taken up with this that soon after New Year's I decided to build some others.

I was keeping up at that time five fires (or smokes) besides the one in the hotel, towit: One in the harness shop and one in Joyce's, both at the north end of the street and opposite each other; one in the bank; one in Townsend's store at the south end of the street on the west side, and one in the depot out across the square in front of the south end of the street. There was a chance for a good tunnel to all of these except to the depot; here the northwest wind had swept across the square and the ground in some places was almost bare.

But the street between the houses was filled up pretty much like a bread tin with a loaf, and starting from the north side of my first tunnel I began another and ran it straight up the street to between the harness shop and Joyce's, and here I ran side tunnels to each of these. The snow was rather low in front of Joyce's at first, and was not enough above the sidewalk to give me room, but the sidewalk here was high, being made of plank, as were all the walks in town, so I went under it by getting down on my hands and knees, and, as the building had no underpinning, I went on under and up through a trapdoor in the floor. I got a good many things to eat from Joyce's, such as canned fruit and the like, but I always wrote down on a piece of paper nailed on the wall everything I got from any store, so that in the spring, if I were still alive, I could pay for it, or, if it were food, Sours could, since I was, of course, still working for him and it was his place to pay for my keep.

South from the first tunnel I next ran another and curved it into Townsend's store. This was a fine, high tunnel, and it would have done your heart good to have seen Kaiser whisk about through all of them, just like a great feather duster, and oftentimes barking at the top of his voice. "be still, sir," I would say to him; "you will disturb the neighbors," at the which he would bark the louder. I often wondered what a stranger, on top of the drifts would have thought to have heard the dog's noise beneath his feet.

It always seemed warm and comfortable in the tunnels, if they were made of snow; this you noticed particularly on a blizzardy day, since, of course, no wind whatever got into them. Indeed, on a windy day I doubt not a snow tunnel would be warmer than a house without a fire. But though Kaiser delighted in the tunnels, Pawsy would have nothing to do with any of them at all except the one which led from the woodshed to the barn.

This I made last. I got into it from a shed window, which I cut down and fitted with a rough door. It ran into the barn through a small door in the corner, which was in halves, like a gristmill door. I opened only the lower half, and this tunnel I used mainly in bad weather. I had only just finished it the day before the fire. It was the day after the fire, when I was feverish for some way to get rid of my scare, that I decided to go to work on my place of retreat in case the town was burned.

I had thought about building something of the kind for a long while, but could not seem to get it planned out in my mind just to suit me. The burning of the livery stable, of course, set me thinking harder than ever. The place had to be, of course, something that would not burn and some place that could not be found. The only thing that wouldn't burn was the snow, but in case of fire I knew that it would melt for some distance from the buildings. I had just had an example of this. Besides, there had to be a way to get into it which could not be seen either before or after the fire, and this entrance must be from a building, so that I would not have to expose myself in going to it. The place must also be where I could stay a few days if I had to. A dozen times I thought I had got the whole thing planned out, and once I wrote about it to my mother, but I always found that something was weak about the plan somewhere. But I now concluded that I had struck on the right thing at last.

A hundred feet back of the next building to the north of the one in which I had my bedroom was a small barn, where the man who owned the place had kept a cow. It was so small that I always thought he must have measured his cow, like a tailor, and built the barn to it. Fifty feet back (east) of this barn was a haystack. Before the snow came the top of it had been taken off so it was left about four or five feet high and the shape of a bowl turned wrong side up. It was in the lee of the barn, and the snow had piled up over it in a great drift so that you would never once have guessed that there was such a thing as a haystack within half a mile. It was, maybe, a hundred feet from the Headquarters barn to this stack, with four or five or more feet of snow all the way. My idea was to tunnel from the barn to the stack, dig out some hay on the south side and have a snug room half made of hay and half of snow.

There was no underpinning beneath the Headquarters barn (most of the buildings in town simply stood on big stones a few feet apart) and the space where it should have been was filled in with a wide board and banked outside with hay. Under Ned's manger I sawed out a piece of this board big enough to crawl through, and hung it on leather hinges at the top, concealed by the manger. I then dug through the hay and had a clear field for my tunnel straight to the stack.

I ran my tunnel, or rather burrow, as it was small and low, a little too much east, and missed the haystack by about three feet, but I probed for it with a long, stiff wire and soon found it. I carried in a hay knife and cut me out a little room like an Eskimo's house, high enough to sit in and wide and long enough so that I could stretch out comfortably in it. The hay had been wet and was frozen, so there was no danger of its caving down on me. As the stack was all covered with snow no wind could get in, and I knew it would always be warm enough to be comfortable with plenty of clothes and blankets. I took in a buffalo robe and some things of that sort and left them there. I also cached a box of food there, consisting of dried beef, crackers, and such things; enough, I calculated, to last three days. I could hardly tell what to do about water, but at last tried the plan of chopping ice into small pieces and putting them into some of Mrs. Sour's empty glass fruit jars. My notion was that in case I was imprisoned there I could button a can inside of my coat and thus thaw enough of the ice to get a drink.

I was very well pleased with what I called my fire stronghold. I could enter from a hidden place in the barn, and could get into the barn through the tunnel from the hotel, which connected with the whole tunnel system. I knew if every house in town burned that it would not melt the snow around the stronghold, and I thought if I were in it when the barn burned I could push down the snow where it melted along the tunnel so that it would not be noticed.

In short, I was so tickled over my Eskimo house that I took Kaiser the first night it was done and slept in it, and though it was one of the coldest nights we were comfortable. I heard the wolves sniffing about on the roof, but we were getting used to wolves. I didn't know that we were going to have to sleep under snow again before spring, and in less comfortable quarters.

(To be continued.)

Went Away in a Hurry.

An Irishman was hauling dynamite in a quarry. He let a stick drop, and the whole box went up, taking Mike with it. The quarry boss came around later and said to another Irishman:

"Where is Mike?"

"He's gone," replied Pat.

"When will he be back?" asked the boss.

"Well," replied Pat, "if he comes back as fast as he went he'll be back yesterday."—O. E. R. Bulletin.

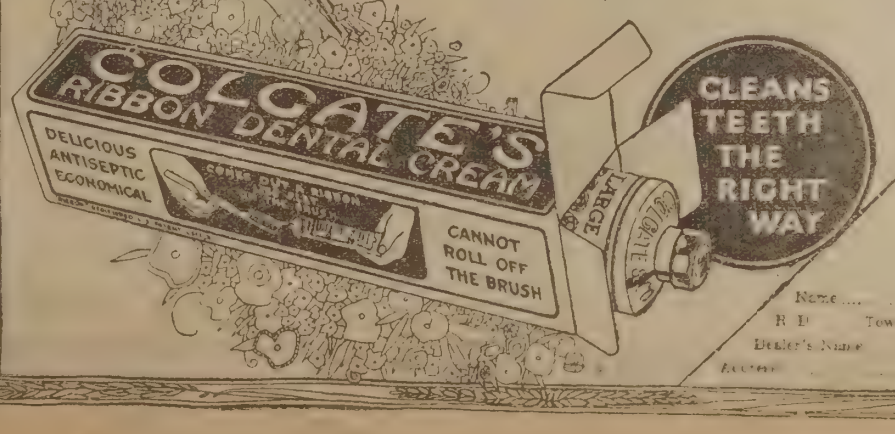
School Teacher (to little boy)—If a farmer raises 3700 bushels of wheat and sells it for $2.50 per bushel, what will he get?

Little Boy—An automobile.

Cuticura Soap
The Velvet Touch
For the Skin
Soap, Ointment, Talcum, 25c. everywhere. For samples address: Cuticura Laboratories, Dept. U, Malden, Mass.

In keeping the dairy and farm buildings sanitary—the orchard and fields free from insects and plant diseases, extreme care must be taken to select the *right* cleansing agents and spray materials.

Likewise in caring for the teeth, progressive farm families, through their dentists and physicians, have learned that the most desirable dentifrice is one which "cleanses" naturally. They select one that doesn't "scratch" or "scour" the teeth with soapless grit.



COLGATE'S CLEANS TEETH THE RIGHT WAY

The combined action of *non-gritty*, specially prepared chalk and pure soap cleanses thoroughly and does not irritate the delicate mouth tissues or "scour" the precious enamel.

So, if your teeth are "on edge" from using a harsh, gritty, soapless tooth paste, try a safe, *common sense* dental cream. Try Colgate's Ribbon Dental Cream with its delicious flavor that makes tooth brushing a pleasure—there's no disagreeable "druggy" taste.

More dentists recommend Colgate's than any other dentifrice. You can get a large tube of Colgate's Ribbon Dental Cream at your store for considerably less than fifty cents.

If you wish samples of the other Colgate products mentioned in the coupon, check those desired and mail it to us.

ALICE BARLAND
EDITORIAL CONTRIBUTOR

Dear Mrs. Barland: Will some one tell me how to clean taffeta silk? I have used gasoline with no effect.

I had bad luck with my jelly last summer. It wouldn't jell as it should, but is like sirup. Do I get it too sweet or what is wrong? MRS. R. P.

Dear Mrs. R. P.: You do not say what sort of soil is to be removed from your taffeta. If grease, gasoline should remove it. When using gasoline, in order to make a good job of it the garment should be put right into a vessel of it and it helps to stand the vessel in a pan of hot water. Then rub the garment just as you would if washing with water and have more gasoline to rinse with. Of course, this will not remove fruit stains, but will take out about all other sort of dirt. I know of nothing better, but you could send it to a dry cleaner. Be sure not to use the gasoline in a room where there is a fire or a flame of any kind, because of its inflammable nature.

I think you must have failed in your jelly making when using some too sweet fruit. You do not say what fruit you used. I could better advise you if I knew. There must be acid in fruit to make really good jell. If you want to use strawberries it is better to extract the juice and mix some sour apple juice or plum or currant juice with it. In making jelly of apples or any fruit where one must cook it to extract the juice you should be careful to have as little water as is possible to get the juice out. But if you do have too much, so it tastes weak and flat, better boil out some of the water before adding the sugar. Then measure cup for cup of juice and sugar. A little lemon juice to real sweet fruit will aid in making it jell. A. W. B.

A sister from Pasco writes: "I have two little girls, three years' difference in age, and to tell their bloomers apart without measuring I work their initials in the front band and by this they can tell which is front and back. MRS. J. M. L.

Hot School Lunch

By MRS. E. M. ANDERSON.

If the school provides for no regular hot luuch an excellent substitute can be provided by using thermos bottles and every child not otherwise supplied with a hot bite at noon should most certainly have one, but in most rural schools there are three or four pupils who have none for every one who has such an article; hence, some other arrangement is very essential. All schools have either a stove or a furnace and any child can just as easily bring bread or soup or stew, as to bring doughnuts, pickles and thick meat sandwiches. A slice of bread put in a toaster and quickly toasted on both sides over a bed of coals and buttered hot makes an appetizing addition to any lunch and most children like it. My pupils and I learned last winter that a slice of bread and butter held carefully over the coals in a toaster till the under side browns delicately and the butter begins to melt is delicious.

It is far easier to prepare a little extra quantity of soup or stew for supper than it is to bake a cake and the surplus, put into a small pail or a large bottle for the school lunch, is fine heated on the stove at noon. A bit of meat hash left from breakfast reheats very appetizingly, too. Coco is nice, but it should be made at noon, otherwise the milk in it may sour. I never could quite see why doughnuts need be so severely criticized; most children like them and, when rightly made, they need not be indigestible. The recipe for doughnuts is never rich and if no grease is soaked in and the cakes are carefully drained they are more digestible than layer cake and as much so as the average cooky. Some people object to potatoes for little folks, but in a simple stew or soup I'll risk the quantity of them any one would get in a cup or two of the mixture. The fact that it is hot should certainly counteract the evil of the potato. Of course nothing is nicer than a cup of hot broth with crackers or croutons, but anything that can easily be reheated on the school stove makes an acceptable substitute for either a warm dinner or a regulation hot lunch and along in February, on zero days, no child should go all day without anything warm—it is neither natural nor safe.

CLEANING POTS AND PANS.

Where it is necessary to scour metal, whiting as a scouring substance will give the metals the least wear, says Extension Service News of the Washington State college. The acid of common foods, such as rhubarb, tomatoes, lemons or oranges, will often remove discolorations.

Whiting moistened with any food acid such as mentioned above is good for aluminum. Washing soda should not be used, as the alkali it contains darkens the metal.

A weak soda solution will remove grease from brass, and whiting and a dilute acid will remove tarnish; brass may be polished with rotten stone and sweet oil and dried with a soft cloth. Copper may be cleaned in the same way.

Kerosene will remove rust and grease from iron. It may also be boiled in a strong solution of washing soda.

Your Health

WHAT TO DO FOR CHILBLAINS.

When I was a young chap I taught school in the country one winter.

I feel sorry for one who has not had the privilege of real country life.

Dr. Copeland.

I stationed myself at the door every zero winter morning and closely inspected every boy or girl. A white nose or a bleached ear was the signal for me to grab the youngster and lead him to a snow pile. With a handful of soft snow I would rub the frozen spot until the blood returned and the tingling nerves gave promise of returned circulation.

This is the way to treat frostbite:

Massage the affected part with snow or cold water.

If this is done at once no bad aftereffects are noticed.

Chilblains are the painful result of neglected frostbite. Women who work in kitchens on cold floors and persons who are out of doors in all kinds of weather are liable to this trouble. Wet feet, tight shoes and some trouble of circulation are the causes underlying chilblains.

You can not be comfortable unless your feet and hands are dry and warm. Make it a point to keep them in this condition. Then you will avoid frostbite and chilblains.

The following prescription is very valuable in the relief of chilblains:

Iodine crystals, five grains; collodion, one ounce; ether, two drachms. Paint this on the chilblain every day. It stops the burning and itching, protects the skin and quickly cures the condition.

If you get home with badly chilled feet don't stand on the radiator or put your feet in the oven. Take off your shoes and stockings, put your feet in cold water, and then rub them vigorously with a rough towel. This treatment will restore the circulation and prevent chilblains.

Treat your ears in a similar way. Massage with cold water will warm them quicker than heat, and will prevent the bad effects of frostbite.

This seasonable advice may spare you the painful and long-continued symptoms which frequently follow exposure to cold weather.

Just Folks

Peculiarities narrow.

Acts may be declarations.

The fullness of time is hid from men.

Most of life is a hop, skip and jump.

Suspicion muddies the waters of thought.

Hard sense may have a sandy foundation.

Commanding power comes from saying what you mean.

Ability depends on foundation as well as upon superstructure.

Many dwellings do not contain the darkened chamber of reflection.

Life may be nine-tenths luck, but sooner or later the other tenth counts.

Every person needs periodical shaking up. Not necessarily for honesty, but for mental balance generally.

WINTER GARDENING.

It is a grave mistake not to "make" your garden in the winter. Gardens that are rushed in after spring opens, without any previous planning, are usually only half satisfactory.

FORTY-THREE years ago Alexander Graham Bell, the inventor of the telephone, wrote this inspired forecast: "It is conceivable that cables of telephone wires could be laid underground or suspended overhead, communicating by branch wires with private dwellings, country houses, shops, manufactories, etc., and a man in one part of the country may communicate by word of mouth with another in a distant place."
At the right, an old print of Bell lecturing on telephony, 1877.

Foresight

More than forty years ago, when the telephone was still in its experimental stage, with but a few wires strung around Boston, the men back of the undertaking foresaw a universal system of communication that would have its influence upon all phases of our social and commercial life.

They had a plan of organization capable of expansion to meet the growth they foresaw; and their wisdom is borne out by the fact that that plan which they established when telephones were numbered by dozens is efficient now when telephones are numbered by millions.

This foresight has advanced the scientific development of the art of telephony to meet the multiplied public requirements. It has provided for funds essential to the construction of plant; for the purchase of the best materials on the most advantageous terms; for the training of employees to insure skilled operators; for the extension of service in anticipation of growth, with the purpose that no need which can be foreseen and met will find the Bell System unprepared.

The foresight of the early pioneers has been developed into a science during the years which have elapsed, so that the planning of future operations has become a function of the Bell System. This is why the people of the United States have the most efficient and most economical telephone service in the world.

LAUN-DRY-ETTE
WASHES AND DRIES WITHOUT A WRINGER

Bits of Fun for Everyone

No Breach of Promise.

The swain and his swainess had just encountered a bulldog that looked as if he might shake a mean lower jaw.

"Why, Percy," she exclaimed as he started a strategic retreat, "you always swore you would face death for me."

"I would," he flung back over his shoulder, "but that darn dog ain't dead." American Legion Weekly.

She Had Heard of Them.

Admiral Eberle, new head of the Pacific fleet, said the other day to a San Francisco reporter:

"Your questions, young man, show a good deal of naval ignorance. You are like the young lady who said:

"'Oh! What are those great, funny-looking things?'

"'Them's men-o-war,' her companion, a boatman, answered.

"'How lovely,' said the young lady. 'And what are those fussy little things behind them?'

"'Tugs, miss.'

"'Yes, naturally! Tugs-of-war. How stupid of me,' said the young lady. 'I've often heard of tugs-of-war, of course.'"—Columbus Dispatch.

The Rush.

Senator Borah was talking about a lobbyist.

"The fellow," he said, "is as resourceful and persevering as the Atlantic City girl who wanted a husband.

"'That girl out there,' an old lady said excitedly to a young man, pointing with her parasol out to sea—'that girl out there is drowning. Why don't you swim out and rescue her?'

"The young man addressed gave an embarrassed cough.

"'Well, you see, ma'am,' he said, 'it would hardly be good form. I rescued her yesterday.'"—Detroit Free Press.

Latest High Class Patterns for the Home

Please order the patterns you desire at least two or three weeks before you wish to use them. Desiring to obtain the latest high-class patterns for its readers, THE FARMER has made arrangements to have them sent direct from the east, and under present mailing conditions it takes about that time for them to reach you.

3867. Misses' dress. Cut in three sizes: 16, 18 and 20 years. An 18-year size requires 3 3-4 yards of 54-inch material. The width of the skirt at the foot is two yards. Price 10 cents.

3846-3843. Ladies' costume. Guimpe 3846, cut in seven sizes: 36, 36, 38, 40, 42, 44 and 46 inches bust measure. It will require 2 3-4 yards of 44-inch material. Skirt 3843, cut in four sizes: Small, 34-36; medium, 38-40; large, 42-44; extra large, 46-48 inches bust measure. A medium size will require 2 7-8 yards of 38-inch material. The width at the foot is two yards. Two separate patterns, 10 cents for each pattern.

3691. Ladies' house dress. Cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. A 38-inch size will require 4 7-8 yards of 36-inch material. The width at the foot is about two yards. If made of contrasting material, collar, belt, cuff and pocket facings require three-fourths yard. Price 10 cents.

3868. Ladies' apron. Cut in four sizes: Small, medium, large and extra large. A medium size requires 2 1-2 yards of 36-inch material. Price 10 cents.

3860. Girl's dress. Cut in four sizes: 6, 8, 10 and 12 years. A 10-year size requires two yards of 27-inch material for the guimpe and 2 1-4 yards of 36-inch material for the dress. Price 10 cents.

3312-2939. An "up-to-date" frock. Waist 3312, cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. Overdress 2939, cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. To make the waist will require 2 1-2 yards of 36-inch material. The overdress requires 3 1-2 yards of 40-inch material. Two separate patterns, 10 cents for each pattern.

3850. Ladies' dress. Cut in seven sizes: 36, 38, 40, 42, 44, 46 and 48 inches bust measure. A 38-inch size requires five yards of 36-inch material. The width at the foot is about 2 1-4 yards. Price 10 cents.

3858. Junior's dress. Cut in three sizes: 12, 14 and 16 years. A 14-year size will require three yards of 38-inch material. Price 10 cents.

3844. Ladies' blouse. Cut in six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. A 38-inch size requires 2 3-4 yards of 36-inch material. Price 10 cents.

3841. Ladies' skirt. Cut in seven sizes: 26, 28, 30, 32, 34, 36 and 38 inches waist measure. A 30-inch size requires 2 3-8 yards of 38-inch material. The width at the foot is two yards. Price 10 cents.

3862. Child's romper. Cut in four sizes: 1, 2, 3 and 4 years. A 2-year size requires 3 1-8 yards of 27-inch material. Price 10 cents.

3863. Child's set. Cut in five sizes: 6 months, 1, 2, 3 and 4 years. The dress requires 2 1-4 yards of material; the petticoat requires 1 7-8 yards, and the drawers one yard for a 2-year size. For ruffles of embroidery on petticoat and dress, 2 1-4 yards for each will be required. Price 10 cents.

Primrose — Builder of Dairy Profits

THE man who purchases a Primrose takes home to his dairy a product held in high esteem. He is fortified by the definite knowledge that it will go quietly to work for him in plain, practical, efficient fashion. He is comfortably certain that it will continue to conserve cream dollars for him, month after month for many years, in a degree excelled by no cream separator on earth.

Two factors convince the man of long-standing experience as to the wisdom of Primrose purchase. The prime factor of International Harvester quality manufacture, which has created International Harvester reputation, guarantees the worth of Primrose separators without more ado. The secondary factor lies in the popularity of the thousands of Primroses which have been placed in service in the nation's dairies during past years.

Cream separator investment is best made, and without long experimental delays or gambling with unknown values, by Primrose purchase.

Primrose Separators run easily and steadily, skim with exceeding closeness, and serve their owners reliably for many years. Direct power drive and electric motor drive equipment available. Built in four sizes with capacities ranging from 350 to 850 pounds of milk per hour. Sold by International Dealers.

BOX 13 STERLING, ILL.

Western Canada Offers Health and Wealth

and has brought contentment and happiness to thousands of home seekers and their families who have settled on her FREE homesteads or bought land at attractive prices. They have established their own homes and secured prosperity and independence.

In the great grain-growing sections of the prairie provinces there is still to be had **on easy terms**

Fertile Land at $15 to $30 an Acre

—land similar to that which through many years **has yielded from 20 to 45 bushels of wheat to the acre**—oats, barley and flax also in great abundance, while **raising horses, cattle, sheep and hogs** is equally profitable. Hundreds of farmers in Western Canada have raised crops in a single season worth more than the whole cost of their land. Healthful climate, good neighbors, churches, schools, rural telephone, excellent markets and shipping facilities. The climate and soil offer inducements for almost every branch of agriculture. The advantages for

Dairying, Mixed Farming and Stock Raising

make a tremendous appeal to industrious settlers wishing to improve their circumstances.

For illustrated literature, maps, description of farm opportunities in Manitoba, Saskatchewan, Alberta and British Columbia, reduced railway rates, etc., write

160 ACRE FARMS IN WESTERN CANADA FREE

High Points in News of the Week

The big news event of the last week was the closing of the arms conference in Washington, Monday's session of this week being devoted to final signatures of the conference treatise and to an address by President Harding voicing the appreciation of the work accomplished. Most of the foreign delegates left Washington Monday night or Tuesday.

With slight modifications, the program outlined by Secretary Hughes at the opening of the conference, regarding the scrapping of capital ships and the limitations of the remaining capital ships and the naval holiday for the 10 years, was adopted. The United States will scrap 30 capital ships, Great Britain 24, Japan 17, and it is agreed that Great Britain shall not have at any time more than 500,000 tons of capital ships, the United States 500,000 tons and Japan 300,000 tons.

Termination of the Anglo-Japanese alliance was a notable accomplishment of the conference, with regard to the Far Eastern question, as well as the return of the province of Shantung by Japan to China.

As to aiding China in securing real independence, the results of the conference are more doubtful, in the opinion of Frank H. Simonds, a noted correspondent. After the last document of the conference was duly signed Japan still has armies on Chinese and Siberian soil; their presence will be an ever apparent promise of ultimate war and that no man can say when that war will come, "but the sure thing is that whenever China or Russia feels herself strong enough to drive the invader out, war must come."

David Lawrence, another noted correspondent, declares that a war with Japan has at least been deferred for a long time.

Perhaps the broadest view of the results of the conference is voiced by Sir Robert Borden, a Canadian delegate, who believes that the educative influences of such a conference on the participating nations is of more value than the notable concrete results which have been attained. To him the only practical means to prevent wars is to educate the public opinion so that the government of each state will be constrained to settle international differences by peaceful means.

* * *

Republican leaders in congress are understood virtually to have abandoned the idea of financing the soldiers' bonus bill by a general sales tax.

Developments at further hearings before the house ways and means committee disclosed that in spite of Secretary Mellon's opposition to the plan a number of the majority members favor the use of part of the proceeds from the refunded British debt in helping finance the adjusted compensation.

Increased inheritance taxes as another means of financing the bonus were advocated by Mr. Ramseyer, who said such taxes could not be passed on and would not be a penalty on initiative and enterprise.

A bill to reduce the number of army officers to 12,000, as compared with 17,000 now authorized, has been transmitted to congress by General Pershing, as chief of staff, and introduced by Chairman Wadsworth of the senate military committee.

* * *

The biggest item of business news in the Pacific northwest last week and one which betokens in a remarkable manner the returning of business prosperity is the announcement by the Washington Water Power company of the immediate extension of its power lines into several districts in Grant county at a cost of $250,000. The building of the power lines will make possible the development of 25,900 acres of fertile land. It is estimated that water can be pumped with the electric current at from $3 to $15 an acre, while gasoline pumping would cost from $15 to $50 an acre.

* * *

The bill authorizing the refunding of the $11,000,000,000 foreign debt into securities maturing in not less than 25 years has been passed by the senate.

* * *

Washington, D. C., Tuesday, January 31, held the first of its many funerals for the 97 persons who perished when the roof of the Knickerbocker theater collapsed under the weight of snow. Congress is making a vigorous investigation of the disaster.

* * *

Prompt action marked the reception by congress of the Ford proposal for lease and purchase of the Muscle Shoals (Ala.) nitrate and water power projects, as referred to the house by Secretary Weeks, for its decision, and afterward for consideration by the senate. Speaker Gillett sent the offer immediately on its receipt to the house military affairs committee.

* * *

At the wool auction held Thursday in Boston by the government, when 7,000,000 pounds of wool were offered, not a pound of wool was withdrawn and competition was keen. Prices advanced on an average of about 25 per cent over the rates at the January sale.

* * *

When the snows melt this spring the Russian steppes will be strewn with skeletons, the Associated Press correspondent in the Volga region writes. They will resemble the high prairies of the American cow country in the days when big cattle outfits had insufficient hay for a hard winter. But among the skeletons of cattle and camels there will be bones of hundreds of thousands of men, women and children who fell exhausted in their quest for bread; who lived the simple lives of the peasant and had little conception of the political upheaval which made this famine more terrible than that of 1891.

* * *

Cardinal Achille Ratti, archbishop of Milan, has been selected by the cardinal college to succeed the late Pope Benedict. Coronation will take place February 12. The new pope will be known as Pius XI.

THE TROPICS COMPETE WITH US.

A new economic factor in our agriculture and in our consumption will be the opening up of the tropical belt to development, Dr. Alfred Atkinson, president of the Montana State college, predicted in a recent address. One-half the arable lands of the world are within the tropical and subtropical belt, he said. Of the tropical arable lands only one-fourth are now in cultivation; of the subtropical there remain yet undeveloped three-times as much arable land as there is left in the temperate latitudes. The output of sugar from the tropics exceeds already that of other latitudes, and if tariff did not enter in sugar would probably be now exclusively a tropical product. Tropical vegetable oil is already affecting our markets, and it is likely that our imports of tropical products will increase, favored by our country's purchasing power. The rate of exchange is, of course, but a temporary factor, but in bringing poor lands to productivity at heavy charge we must reckon with cheap tropical production.

EVIDENCE OF FALLING PRICES.

Notwithstanding the fact that the price that the farmer must pay for his implements and other equipment are yet much higher in proportion than are the prices that he receives for his product, evidence continues to accumulate that the leveling process is going on. Just now comes the report from Detroit that a reduction in the price of the Fordson tractor has been made. The piece of power machinery has been $625 f. o. b Detroit, and has sold for $714 at such distributing points as Spokane. The Detroit price is now announced as $395, with a Spokane quotation of $484.

THE SUMMER FALLOW.

The purpose of summer fallow is not only to conserve moisture, but to get plant food, and the summer fallow should be plowed early and cultivated well.

YOU'LL be surprized at the little cost at which you can make your house look distinctive. The window cut accompanying this ad, is known as the "Queen Anne" design.

For an additional $15 or $20 your whole house can have this classy window. Before you finish building send for our catalog. Rovig, 2201 First Avenue South, Seattle.

"Better Millwork."

"I have a pet rabbit, two cows and a little heifer named Pollyanna," says Edith Saunders. Edith also has some chickens and some of them will let her pick them up. She has two cats, too. The one named Tabbia does funny pranks. The big cat's name is Jamie. Edith lives in Kitsap county, Washington.

Seven-year-old Alice M. Jones is in the second grade at school. Her teacher's name is Miss Ristau. Ila and Ethel are her sisters and Eldred and Perry are her brothers. Her birthday is October 23. She says they have 36 hens. Alice lives near Eloika lake, in eastern Washington.

Ludvig Lundstrom is getting along well at school. He is in the fourth grade and his teacher's name is Mrs. Howard Barnes. Ludvig says she is a good teacher. This cousin was 9 years old January 30, 1922, and lives near the Yakima river in Washington.

We have another letter from the Stormes home in northeastern Washington. George Stormes says he has four calves, six cows, three cats and a dog for pets. He goes to school, but had a good time at a party the day he wrote, which was Saturday. August 25, 1922, he will be 12 years old.

"I was 10 years old January 31, 1922," writes Eunice Claudine Stormes. "My pets are three cats, one dog and four calves. I have two brothers, Clifford and George Stormes. I live one and a half miles from school." Eunic'e home is near the Kettle river, in northeastern Washington.

Edward Leppaner writes his first letter to Aunt Nellie. Here is what he says: "I am 8 years old and I am in the second grade. I like to go to school. There are three in my class. We have eight pupils in our school. Our teacher's name is Miss Mary Jane Walsh. I like her. I have two sisters and two brothers. My birthday is April 10." Edward lives in southern Klickitat county, Washington.

"My father takes THE FARMER and I surely do enjoy reading the stories and letters," says Clara Peterson of northwestern Washington. Clara is 10 years old. Her birthday is the 6th of March and she is in the fifth grade at school. She walks a mile and a half to school. Her pets are two dogs. Their names are Trixie and Sport.

For pet Dorothy Palmer has two cats—a big cat and a little kitten. Some time she may send us a picture of the big cat. (We should like that, Dorothy). There is good coasting in northeastern Washington, where Dorothy lives. She says they can coast a long ways and it is fun. She doesn't see how we can read all the letters we get from the cousins, but we think it is fun. This is what she writes about her school. "There are six kids in my class. I am in the sixth grade. I take arithmetic, spelling, language, history, reading, hygiene and geography. Arithmetic is the easisest and the nicest study." Dorothy will be 11 years old October 7, 1922. Her papa has taken THE FARMER ever since it has been published.

Lora Ditmore writes her second letter to Aunt Nellie. She lives on the Stilaguamish river, in northwestern Washington, and was 10 years old February 5, 1922. She says her school had a Christmas program December 23, 1921.

"My name is Marion Meyers and I live in the country," says a cousin in southern Clarke county, Washington. "I have two sisters and one brother. I am 10 years old and am in the fifth grade. I was born on leap year, February 29, 1912. I celebrate my birthday on February 28 all other years."

THURSDAY, February 9—Clara Beeman, 9 years old; Laura Brand, 11; Edwin Hall, 10; Florence Eleanor Martin, 10.

FRIDAY, February 10—Helen Berry, 11 years old; James Brooks, 10; Viola Johnson, 11; Margaret Plett, 10; Rex Rainbolt, 10; Muriel Stahly, 10.

SATURDAY, February 11—Elsie Fields, 10 years old; Linnea Gord, 11; Katherine Ottmer, 11; Fred Ritzschke, 11.

SUNDAY, February 12—Frank Neimela, 10 years old; Eva Pyne, 11.

MONDAY, February 13—Agnes Regan, 11 years old; Grace Shaw, 11.

TUESDAY, February 14—Jessie Manis, 9 years old; Golda Mae Myers, 11; Orla Kirchner, Glen Pate, 7.

WEDNESDAY, February 15—Sima Erickson, 10 years old; Goldie Green, 11; Edith Osborne, 10; Elizabeth Parrish, 10; Helen Sicilia, 11; Erma Sills, 9.

In each issue a list of the cousins' birthdays for the week will be published. At the close of each letter you write be sure to tell how old you are and when your birthday comes.

LETTERS WELCOMED BY AUNT NELLIE.

Among recent letters received by Aunt Nellie are those from cousins whose names follow. A few of these will be published each week in the regular edition of THE FARMER, and others will appear from time to time in The Junior Farmer:

Alvin Cline, Mary Lautenschlager, Norma Hubbard, May Davis, William Engbretson, Alice Harding, Mayme Mattila, Grace Grandstaff, Robert Osborn, Elenor Geneva Hagy, Virginia Hershey, Marguerite Edlin, Adna Evans, Bertha Osborn, Alice Larson, Joe Staadt, Lora Ditmore, Helen Paulsen, Lawrence Wade, Eunice Claudine Stormes, George Stormes, Esther Lund, Bernice Stichler, Leander Carlson, Glen Brem.

BEDTIME STORIES

By THORNTON W. BURGESS.

Copyright, 1919, T. W. B.

JERRY MUSKRAT'S SECRET DOOR.

Jerry Muskrat's new house was growing. Yes, indeed, it certainly was growing. With so many helpers to cut alder and willow shoots and bulrushes and to bring them to him, Jerry was kept busy building. It was no time at all before the walls of Jerry Muskrat's new house showed above the water, and then they grew higher and higher and higher.

Jerry Muskrat worked and worked and worked with might and main. You see, no one could help him actually build the new house, because no one but himself knew just how it should be built. He put the willow and alder shoots just so. He placed the rushes and grass just where they were needed, and then he kept them in place with mud.

"That's a queer-looking house," said Sammy Jay. "It looks to me like nothing but a pile of old rubbish."

"Just you wait," replied Jerry Muskrat, as he climbed up to place more bulrushes on the roof.

So Sammy Jay waited, for there was nothing else to do, and the house grew and grew and grew. By and by the roof was on and Jerry Muskrat sat on top of it to rest and eat his supper of fresh-water clams, which he had brought up from the bottom of the Smiling Pool. Sammy Jay cocked his head on one side.

"Pooh!" said Sammy Jay. "That's no kind of a house! It hasn't any door."

Jerry Muskrat just grinned and said nothing. He was too busy opening a clam

Jerry Muskrat didn't seem to mind.

for thought. Sammy Jay began to laugh.

"What are you laughing at?" asked his cousin, Blacky the Crow.

"I am laughing at Jerry Muskrat. He's built a new house and it hasn't any door. Ha, ha, ha!" replied Sammy Jay.

Blacky the Crow flew close down to Jerry Muskrat's new house and looked it all over; that is, he looked at all that he could see. Sure enough, he could find no door. Then Blacky the Crow began to laugh, too, and flew over on the Green Meadows to tell the little meadow people about the great joke on Jerry Muskrat—how he had built a house without any door.

But Jerry Muskrat didn't seem to mind, not the teeniest, weeniest bit. When he had finished his last fresh-water clam Jerry washed his face and combed his hair. His eyes twinkled as he shouted to Sammy Jay:

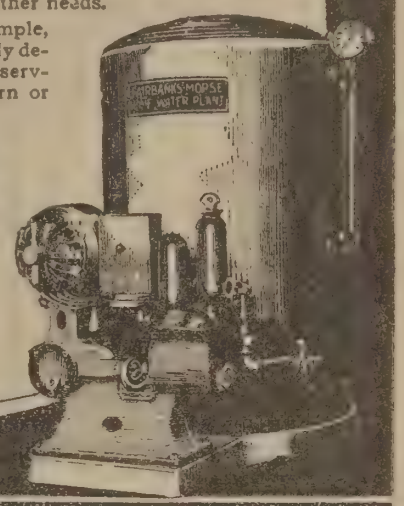
Some folks believe just what they see,
And some folks think that nothing else can be.
But some folks don't know all they might;
My door is hidden out of sight.

Splash! Jerry Muskrat had dived into the Smiling Pool. Two minutes later he was making his bed of soft grass in the upper room of his new house.

WATER
FOR THE WHOLE FAMILY 2c A DAY

Everyone wants the home convenience of "water at the turn of a faucet"—hot or cold—for drinking, bathing, laundering, and other needs.

This new plant is automatic, simple, wonderfully well made—specially designed for constant home water service from a shallow well, cistern or spring.



FAIRBANKS-MORSE HOME WATER PLANT

is just what thousands of home owners have been waiting for. Just think of enough water for the whole family, daily, for the price of a postage stamp.

THE AUTO-OILED AERMOTOR
A Real Self-Oiling Windmill

A year's supply of oil is sent with every Aermotor

Oil an Aermotor once a year and it is always oiled. Every moving part is completely and fully oiled. A constant stream of oil flows on every bearing. The shafts run in oil. The double gears run in oil in a tightly enclosed gear case. Friction and wear are practically eliminated.

Any windmill which does not have the gears running in oil is only half oiled. A modern windmill, like a modern automobile, must have its gears enclosed and run in oil. Dry gears, exposed to dust, wear rapidly. Dry bearings and dry gears cause friction and loss of power. The Aermotor pumps in the lightest breeze because it is correctly designed and well oiled. To get everlasting windmill satisfaction, buy the Aermotor.

Cattle and Hog Sales

With the stronger tone that has appeared in the beef and pork markets the breeders who are planning sales this spring are expecting greater interest on the part of buyers than has been manifested at auctions for the last couple of years. Increasing strength in cattle and hogs, together with continued low prices for hay and greatly reduced prices for grain feed from even one year ago, has given a stimulus to the live stock industry, the like of which it has not felt for many months.

There are several important sales announced for the next two weeks. Today (February 9) at Sunnyside occurs the annual sale of the Yakima Valley Duroc Jersey association, at which a considerable number of swine consigned by members of the association will go to the highest bidders. On February 18 Hugh Walter & Son of Townsend, Mont., will offer 40 head of his well-known Poland Chinas at auction at Yakima. February 21 there will be held at the Spokane Union stockyards the largest single purebred swine sale in recent years, when the Western Royal Swine Breeders' association offers about 150 head of the four leading breeds consigned by breeders of the Pacific northwest. At all of these sales bred sows and gilts are offered, enabling farmers to get quick starts in breeding purebred swine. Many smaller sales are being held, and many breeders are disposing of much of their good stuff at private treaty.

There is marked activity at this time among the Shorthorn breeders. Four large sales are announced, though the date of the fourth has not yet been selected officially. The first will be held at Spokane February 22, when the Northwest Shorthorn Breeders' association offers about 25 bulls and 25 females consigned by breeders throughout the territory. This sale occurs at the time of the northwest live stock conference, as does also the association swine sale previously referred to.

On February 23 the Day & Rothrock Co. will hold its third annual sale of Hercules Shorthorns, when 16 bulls and 28 females will be offered. For the first time the sale will be held on Hercules farm at Sprague, previous sales having been held in Spokane. Among the offerings are several young bulls by the well-known herd sires of the farm, including Gainford Perfection, whose get has never been defeated in the get-of-sire class at any of the many shows where entered. One of the bulls offered is Hercules Snowstorm, a calf by Village Sultan and out of the grand champion cow, Hercules Matchless.

The third Shorthorn sale of the series is that on the A. D. Dunn place, near Wapato, in the Yakima valley, on February 24. At that time Mr. Dunn will offer about 40 head, including a few to be consigned by other nearby breeders.

The fourth sale will be an association consignment sale at Portland some time in March, the exact date not having yet been announced.

GUERNSEYS ON TEST.

A herd of Guernseys that is making good milk and butter records, after making a good record on the show circuit, is that of Wallace & Fordyce of Sunnyside, Wash. Edna of Mountain View, four-and-a-half-year-old, was put on test before she showed at the Pacific International, where she stood third in class. In November she produced 73 pounds of fat and in December 87 pounds, not officially reported when this was written, but according to the tester's figures. Two on test are two-year-olds and all are making good records. It is the plan to give records to the entire herd of about 25 head.

NEW WORLD RECORDS.

Among five new world records which will presently be announced by the Holstein-Friesian association are two in the 305-day division by Washington cows. Tyee Hiske Fayne, a junior 4-year-old in the herd of E. E. Heg & Sons of East Stanwood, has finished a test of 25,210.1 pounds of milk and 896.10 of butter.

Gerben Bracelet Bessie, a junior 3-year-old owned by T. J. Owens of Kirkland, has finished a 10-months' test with 761.4 pounds of butter from 23,429 of milk.

FARM BUREAU HOG SALE.

The purebred hog sale under the direction of the Whitman county farm bureau will take place February 17, in Colfax. This will be a sale of bred females of several breeds and includes consignments from G. O. Swales, Johnson; Frank Bush, Colton; Fred Hoffman, Albion; P. L. Sain, Oakesdale; J. H. McCroskey, Garfield; H. S. Curtis, Oakesdale; S. W. Shoemaker, Garfield, and J. E. Trimble, Garfield.

HOLSTEINS AND DUROCS.

S. L. Banks of Tekoa, Wash., announces February 28 as the date on which he will offer for sale at auction some 30 head of purebred Duroc Jersey swine and several young Holstein bulls and other live stock. The swine include both boars and females, the latter bred to farrow this spring. The sale will be cried by Colonel Harry C. Cranke of Moscow.

"Happy Days! I'll say!"

"MY brothers were fine upstanding youngsters. As for me—I was badly sweenied and nobody gave a hook-joint whether I became a plough-horse or a saw-horse.

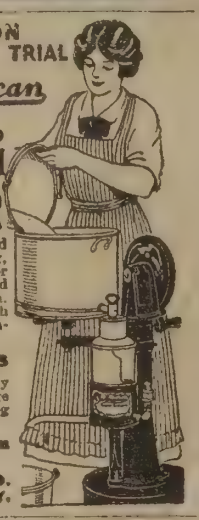
I WAS swapped around 'till finally I got a regular boss who said, 'Sound as a nut, except that blamed sweeny. We'll soon get rid of that.' And he did with Gombault's Caustic Balsam".

GOMBAULT'S CAUSTIC BALSAM does the work better than firing. Hair will positively grow back natural color.

A positive remedy for Curb, Splint, Sweeny, Capped Hock, Strained Tendons, Founder, Windpuffs, Skin Diseases, Thrush, Spavin, Ringbone, Throat and Bronchial Troubles. Will not scar or blemish. Supercedes all firing and cautery.

Sold by druggists, or sent by parcel post on receipt of price $1.50 per bottle.

AS A HUMAN LINIMENT



It is unsurpassed for muscular and inflammatory rheumatism, sprains, sore throat, burns, bruises, cuts, etc.

Third Annual Sale

Hercules Shorthorns

at

Hercules Ranch, SPRAGUE, WASHINGTON

Thursday, February 23, 1922

16 Bulls 28 Females

With few exceptions these cattle are of our own breeding. We are holding the sale at our ranch so that you may have the opportunity of seeing our herd bulls and breeding females—the sires and dams and brothers and sisters of the cattle we will offer for sale.

The females include 4 cows with calves at foot, 10 bred heifers and 14 open heifers. These females are suitable foundation material for the most discriminating breeders.

We particularly call your attention to Hercules Snowstorm by Village Sultan and out of Hercules Matchless, the famous show cow which defeated Little Sweetheart, 1919 International Grand Champion, at the Western Royal in Spokane in 1920. We also call attention to Hercules Imperial by Gainford Perfection, Hercules Callant by Village Sultan, Knight Superior, Royal Marshall and other herd bull material of unusual merit. There are also a number of excellent range bulls. All in all, this is the

BEST LOT OF CATTLE WE HAVE EVER OFFERED

(Our entire herd is under federal supervision)

F. L. Mouson
Cashier.

THE PRIZES

Winning Answers Will Receive Prizes as Follows:

	If No 'More Eggs' is ordered	If $1 worth of 'More Eggs' is ordered	If $2 worth of 'More Eggs' is ordered	If $5 worth of 'More Eggs' is ordered	If $10 worth 'More Eggs' is ordered
1st Prize	$40	$300	$600	$2,000	$5,000
2nd Prize	20	150	300	1,000	2,500
3rd Prize	10	75	150	500	1,250
4th Prize	10	50	100	250	625
5th Prize	10	30	60	150	375
6th Prize	6	20	40	100	250
7th Prize	6	15	30	80	200
8th Prize	6	10	20	60	150
9th Prize	4	10	20	40	100
10th to 15th	4	10	20	40	100

Observe These Rules:

1. The contest is open to every man, woman, girl or boy living in America, except employees or relatives of employees of E. J. Reefer. There is no entrance fee of any kind.

2. You must use only one side of paper. You must number your list of names in regular order—1, 2, 3, etc. Your full name and address must be written on each page in the upper right hand corner. Use a separate sheet for anything you may wish to write outside of your list of names and your name and address.

3. English words only will be accepted as they appear in the English dictionary. Obsolete words will not be counted. Both the singular and plural of a word will not count; either one of them may be used.

4. Compounds or words which are made up of two or more complete English words cannot be used.

5. The same spelling of a word will be counted only once even though it is used for different articles or objects, or parts of them. Each article or object can be given only under one name.

6. Two or more people may co-operate in answering the puzzle. However, only one prize will be given to any one household. No prize will be awarded to more than one of any combination outside of the family where a number—two or more—have worked together.

7. If a contestant sends more than one list under the same name, an assumed name, or a pre-married name then all lists of such contestant will be disqualified. If more than one list is sent by any group or by any members of the same group who have co-operated in the preparation of such lists, then all lists of such contestants will be disqualified.

8. All answers must be received through the mail by E. J. Reefer, 9th and Spruce Streets, Philadelphia, Pa., and must be post-marked by Post Office closing time, March 11, 1922.

9. The first prize will be awarded for the answer containing the largest and most nearly correct list of the names of visible objects and articles beginning with the letter "P" shown in the picture. No other consideration, such as neatness, style or handwriting, will have any bearing in making the decision.

10. The full amount of any of the prizes will be awarded to each contestant in the event of a tie.

11. The decision will be made by three judges entirely independent of and having no connection with E. J. Reefer. They will judge the answers submitted and award the prizes at the end of the contest. Participation in the contest carries with it the acceptance of the decision of the judges as final and conclusive.

12. All answers will receive full consideration whether or not "More Eggs" is purchased. At the close of the contest, when all lists have been graded, the names of the prize winners will be announced and the list of words will be sent upon request to any participant who sends us a stamped, addressed envelope.

How many objects beginning with "P" can you find in this picture?

Open to Everybody

Come on. Join in the big puzzle game. Your chance to win $5,000 or one of the 14 other big cash prizes. Easy and lots of fun. All you have to do is write down the names of the objects beginning with "P" on this picture and send your list in to us. If your list is largest and nearest correct, the judges will award you First Prize; if your list is second largest and nearest correct, you will win Second Prize, etc.

Get a pencil and paper. Start right now. Find all the objects in the picture beginning with letter "P", such as "pistol", "picture", etc. See how easy it is. Nothing is hidden. You don't have to turn the picture upside down. Every object is in plain sight. You can find them all. Start right away.

Costs Nothing to Try!

All you have to do is send in your list of "P" words. If the judges decide that your list is largest and nearest correct, you will win First Prize of $40 even if you don't send in an order for "More Eggs". But if you order $1 worth of "More Eggs" and you also win First Prize, you will get $300. If you order $2 worth of "More Eggs" and if your list of of words wins First Prize, you will get $600. And if you order $5 worth of "More Eggs" and your list is awarded First Prize, you win $2,000 — but if you order $10 worth of "More Eggs" and your list is awarded First Prize, you will win $5,000.

Win All You Can

You don't have to send in an order for "More Eggs" in order to enter this contest. You can win $40 as First Prize even if you have sent in no order. But if you ordered $10.00 worth of "More Eggs" the same list would win $5,000.00 for you. A difference of $4960.00. Which prize do you want?

Get Busy NOW

Today! Get your list in early. Send your order for "MORE EGGS" at the same time. Qualify for the biggest prize—for the $5,000.

Prize Gilt Will Help Clear Stump Farm

By HORACE ADDIS

It was the desire of the WASHINGTON FARMER, when it offered prizes for the best letters on "The Hog as a Farm By-Product in Washington," to benefit the recipient of the prizes, as well as to emphasize the value of a few hogs on nearly every farm. Perhaps nothing could have been more fortunate than the winning of the gilt by a man who is struggling to get a start in farming, with small capital but an undaunted courage, a wife willing to share his lot and do her full part, and a family of growing children. These are assets which count more than mere dollars in the struggle of life.

Following instructions from the head office to go and see the winner of the gilt, ascertain his choice and complete arrangements for the delivery of the pig, I was driven by auto out from Rochester, in Thurston county, on the morning of January 29, four miles to the foot of a hill, where we "parked" our machine and walked the remaining three-quarters of a mile to the farm of Mr. and Mrs. M. A. Hall. The night had been quite cold and a very slight thawing of the ground made it hard for the "flivver" to make the grade.

The top picture herewith gives a fairly good idea of the farm we found. Mr. Hall bought 40 acres for $1800, and then purchased nine and a half acres more of broken hillside for $250, to get an outlet to the public road. His three-room house is shown in the picture, while further back is a small barn. Out of sight behind the house is the chicken house. It shelters 25 good, young Brown Leghorn hens, of which Mrs. Hall is very proud, and which yielded a nice profit last year, and promise to again this season, in spite of the fact that, regardless of all precautions, a "varmint" will occasionally catch one of the chickens. The house and barn were on the place when purchased. The poultry house Mr. Hall built himself. He also bought a fine type Brown Leghorn cockerel at Colfax, Wash., to head the flock, paying five dollars for him.

Mr. Hall has a farm of mostly good land. It is all fenced, a part of it with logs and brush which turn stock as well as a more expensive material. When he moved on the place a year ago, two acres were cleared, ready for the plow. On this land he grew potatoes, mangels and a little garden truck. He worked for a logging and mill company, whose mill is a mile and a half away, and from his wages he is paying for the farm by the month. All his spare time is given to clearing land and working on the place. This year he will have five acres in cultivation. Potatoes and garden will be grown on some of the new land and some oat hay will be raised.

The equipment of this farm, besides the hardened muscle and willing minds of the Hall family, is a grade Holstein cow, a light hack and one horse, besides the poultry already mentioned and miscellaneous small stuff.

Four years ago Mr. Hall's home in the town of Shelton, Wash., was burned, with everything in it. He had been working for a logging company, but went to Seattle, where he worked in a shipyard, during the war.

He understands the use of powder and the handling of stumps. He says he has demonstrated that the cheapest way to remove stumps is to use powder. He blasts, not excessively, and then pulls the stump pieces out with a horses and block and tackle.

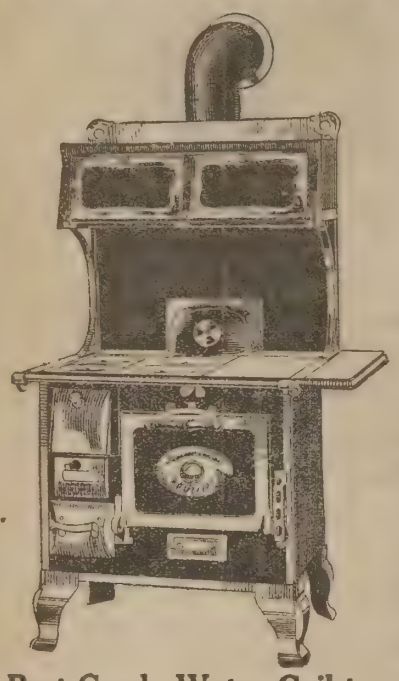
Mr. Hall was born 35 years ago and was raised on a farm in Snohomish county. He was on a Yakima valley farm for five years. Mrs. Hall is five years his junior and they have five children, the oldest 12 years. The three oldest are boys, the other two, girls. The three boys were in school when I was there, hence their not being in the picture.

Optimism, courage and determination to overcome obstacles seem to be the ruling spirit of both Mr. and Mrs. Hall. Not one word of discontent did I hear while at the Hall homestead. Big fir stumps to combat seemed to be taken as a part of the battle of life, to be met the best they could, just like the disaster of a fire, or any other seeming adversity.

Mr. Hall wants to breed O. I. C. hogs. First, he likes them best and believes he can make at least as much from them, either for meat or breeding stock. Then, he has two neighbors breeding O. I. C.'s, and he has the community idea. He hopes to trade boars and make some saving that way.

As stated last week he was presented with a purebred gilt secured by The Washington Farmer from the herd of O. O. Phelps, of Dryad, Lewis county. She will bring pigs this spring

Continued on page six.



The upper picture shows what The Washington Farmer camera saw of the Hall farm on a pretty dark day for taking pictures. The lower one is not, to be sure, the prize won by the Halls, but possibly it suggests the dream that they have, and which THE FARMER hopes will be realized this spring when the purebred O. I. C. gilt that they won brings her litter of pigs.

You Can Now Buy

The OHIO Steel Range

at the new Low Price

$69.00

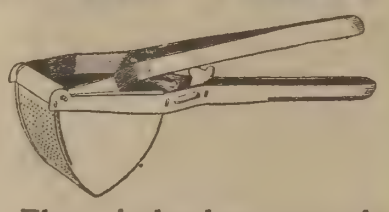
(We Pay the Freight)

THE four-hole Ohio Range (exactly as pictured) with 17-inch oven, now quoted at the lowest price in years!

Frederick & Nelson have sold the Ohio over a long period of years and recommend it to you unreservedly. It is a great Range value at the new price.

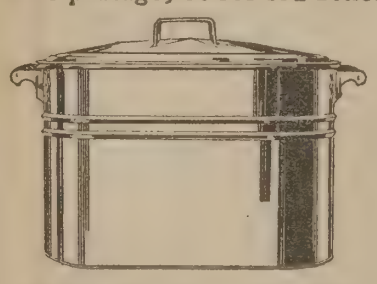
Many know it as the *"8-minute"* Range. The oven is at baking heat 8 minutes after you touch a match to the kindling. For baking results the Ohio is unexcelled. For fuel economy it is famous (burns wood or coal).

Best Grade Water Coil to fit this range is priced at - $3.00



The OHIO is the best Range investment we know today, at the new price—$69.00.

Please note that WE PAY THE FREIGHT on furniture, metal wares and other bulky goods, when purchase amounts to $5 or over, to any railroad station or steamboat landing in the State of Washington.



Other Splendid Values for the Woman of the House

Family Size POTATO RICER 25c

As Pictured

A very useful implement for the kitchen. Rices potatoes, extracts fruit juices and is useful in a score of other ways. Eleven inches long; strongly constructed of galvanized steel and heavy tin; nothing to get out of order. Exactly as pictured. *(Remit 6c for 1st and 2nd zone postage; 8c for 3rd zone.)*

Copper-bottom LAUNDRY BOILER $2.15

As Pictured

Choice of two sizes: 22¼ and 23½-inch. Strongly constructed Boilers, exactly as pictured, with copper bottom and fit-in cover.

(Remit 24c for 1st and 2nd zone postage; 44c for 3rd zone.)

Improved Model FOOD CHOPPER - $1.45

As Pictured

Five extra cutting knives enable this Chopper to be used to good advantage in preparing a wide variety of dishes. A very strongly constructed Chopper. A great improvement is the clamp which enables the "barrel" or main part of the Chopper to be completely opened up for cleaning.

(Remit 9c for 1st and 2nd zone postage; 14c for 3rd zone.)

Home Builders --Save Money

TUMWATER Ready Cut Home Plans

Send 25c in Stamps or Coin for 44-Page Book

If you are thinking of building a new home or altering an old one, get the Tumwater Bungalow Book. In it you'll find dreams of homes—real home-like bungalows, floor plans, etc. And you'll also learn from this book how to obtain the material for these homes at a saving you never dreamed possible. For anybody contemplating the building of a home, or ever remodeling, this book has a value beyond price. Just use the coupon—include only 25c Stamps accepted. If you can drive a nail you can build your own home from ready cut plans and ready cut material which we furnish.

Ready Cut Houses and Their Lesson

From the Olympia Daily Recorder

The work the six Anderson brothers of Tumwater are doing in the manufacture of ready cut houses, as sketched briefly elsewhere in today's Recorder, has significance for Olympians who look expectantly to the future. These men have something good for the years to come, something which avoids waste of natural products, which opens the way for other natural development and which will spread the name of Olympia and Tumwater far afield as the home of industry whose products promise to be sold everywhere. This is the sort of industry most appropriate and most needed in the northwest at this time. It is the "cleaning up" type of industry, the industry that conserves and leads to other possibilities of conservation, following the larger timber industry which hews the way in a new land and must of necessity waste much as it passes. The ready cut house idea and the veneer plant are two which naturally present themselves in transition between the lumber mill which conquers the greater forests and the factories for ladders, clothes pins, handles for tools, furniture, matches, toothpicks, boxes, kegs and barrels and woodenware of all sorts.

Representatives Wanted

Live, aggressive men are desired everywhere to become our special representatives. Very few opportunities offer the money-making possibilities that a "worker" will find in the selling of Tumwater Ready Cut Homes. Address us today for full particulars.

The Tumwater Lumber Mills Co.

Tumwater, Wash

For Good Farming, Attractive Country Homes and Happy Country People

"Mr. Gompers Catches a Tartar"

Labor Leader's Attitude Causes Vigorous Action at Recent Conference

Wall street is waking up to the breadth, sanity and ability of farm leadership. Herewith is given an editorial from the Wall Street Journal of January 31. This editorial refers to an exceedingly interesting debate at the final afternoon session of the national agricultural conference at Washington, D. C. The debate was over the adoption of the report of the subcommittee on railway transportation of which Howard Leonard was chairman. Mr. Leonard is president of the Illinois Agricultural association and is also a member of the executive committee of the American Farm Bureau federation. After the reading of the report Samuel Gompers, president of the American Federation of Labor, contended that labor has been deflated already and at once moved to strike out the alst paragraph of this report, which was as follows:

"In conclusion, we insist that the railroad corporations and railroad labor should share in the deflation in charges now affecting all industries. This is essential to the restoration of normal conditions in agriculture and it is essential to the welfare of the entire community. We earnestly appeal to those in authority to take such action as may be necessary in order to accomplish that result."

Here is the Wall Street Journal editorial:

Perhaps without intending it, Mr. Gompers has performed a real service to the country. Farmers attending the agricultural conference will go home with a clearer idea of the cause of high freight rates than they ever had before.

One of the committee reports laid some of the present burden on railroad labor. The labor union head took the platform and made a bitter speech. Later Mr. Gompers declared that all labor would regard the adoption of the report as an "unfriendly act," and challenged the accuracy of the statement ascribing an undue proportion of operating expense to labor. The result must have been surprising to him, as indeed it was to many onlookers.

Farm work is not generally looked upon as conducive to oratory, but few are the conventions that have witnessed more real eloquence than was exhibited in the ensuing debate. Many of these speakers were the real dirt farmers, but they were as keen in debate as trained speakers, and better, for they know and felt their topic. They were eloquent because they were conversant with the facts, and spoke to the point in a clear and convincing manner. They were men of independent minds, thinking for themselves, dealing in facts and not in "slogans."

These farmers proceeded to smash the labor arguments. They quoted from the interstate commerce commission reports to show that 60 per cent of the gross operating expense went to labor. They showed from official records that the railroad labor averaged $1640 a year, while the farmer, with his whole family working 13 1-4 hours a day, has averaged $460.

Concrete instances were given of what high railroad labor costs the farmers. And then their attitude was expressed without regard to the feelings of Mr. Gompers. "We will not be called upon to justify our actions to a local boilermakers' union," said a Kansas man, "but we must go home and justify ourselves to the farmers who, with their families, work three days of 14 hours each to make enough to pay the boilermaker for one day of eight hours."

Instead of being moved by the Gompers plea for the "5,500,000 unemployed men" the farmer delegates turned the tables and showed that labor exactions were the cause of unemployment. One said there could be no general prosperity while the farmer's purchasing power was curtained. "Give us a living wage for our work," said one, "and we will underwrite the country's prosperity and there will be no unemployment."

These speakers among the farmer delegates have sown good seed. The farmers, as individuals and untainted by populism or socialism, are independent men who want to think for themselves. They are not the kind who will take just what the labor leaders and the politicians hand out to them. They differ from the disciples of Mr. Gompers. The farmers are beginning to think.

L. J. Tabor, state commissioner of agriculture in Ohio, was one of the speakers in this debate. He declared for the adoption of the report "because it is fair, because it is square, because it presents a proposition that inevitable adjustment must come. We are not asking one class to bear those adjustments; we are asking all to share equally."

Dean E. J. Iddings, of the Idaho college of agriculture, especially brought out the point that "the organized labor here in this country makes an announcement of five million unemployed and claims that the laborer who works today and is idle tomorrow has to be paid for the idle days."

Probably no one in the conference summed up the situation more pointedly than President J. R. Howard of the American Farm Bureau federation, who said:

"I am here as an Iowa farmer and I hold a brief for about 6,000,000 farm laborers of this country. I have been an employer of labor for years. I want them to have a living wage. They can not have it at the price which I get for my product from my Iowa farm. That laborer on the farm, and there are 6,000,000 of them, is entitled to just as good as the laborer in the city. I know they haven't today and it is not in prospect until we have a change in things. What the farmer wants is to get our economic system back into the balance. It is out of balance. Deflation hit us—it hit us suddenly. It is a crime the way it hit us. Our prices went down. I doubt if they will ever come back to where they were, but there must be a meeting of the earning powers of the various industries of our community.

"It is true that railroad labor is highly paid in comparison with other labor. The matter was discussed this morning. Last week I made a careful investigation at the railroad labor board in Chicago, taking the month of August, with a total wage paid to labor for that month and dividing by the number of employees, and I found that the average railway laborer for the month of August received $135, or a total of $1620 per year, as compared to $400 or $500 for the laborer on the farm. The farm laborer must buy the same clothing, food, shoes, as the railway laborer.

"We want to get a balance, as I said before, as between the railroad, industry and agriculture. Until we get that balance things won't be any better. The great amount of unemployment of labor has been referred to. Farm prosperity and nothing else will bring about reemployment of labor. The farmer has the biggest contract that was ever made, that of feeding 110,000,000 people with American standards of living and American ideals. You give us a reasonable return upon our investment and a reasonable wage for our labor and we will underwrite the prosperity of American business."

Thomas C. Atkeson, representative of the National Grange at Washington, D. C., summarizes this important debate:

"Half of the Friday forenoon and afternoon session was taken up with an effort by Samuel Gompers and a few friends who showed themselves among the delegates, to forestall and prevent references in various committee reports to frank statements that the high wage level of union labor must come down to meet farm wage levels and farm product price levels. levels. Gompers won a temporary victory by getting referred back to Dean Russell's committee on costs, prices and readjustments a resolution so phrased that it called on labor to deflate, and not on capital.

"Late in the afternoon the Russell committee re-reported the resolution, reworded, but not weakened in any particular, charging that prosperity could not come back until 'labor and capital had accepted their full part in price readjustment.'

"Prior to this Gompers had moved to strike out of the transportation committee report these words: 'In conclusion we insist that railroad corporations and railroad labor must share in the deflation in charges now affecting all industries.'

"In the debate following, but a single voice was raised to support his motion. Farm leader after farm leader from Thompson, the veteran granger from Maine, to Howard, the farm bureau president, from Illinois, warned Gompers that his position was untenable. His motion was defeated without a division, but the volume of votes indicated less than a score of votes for, and 200 against.

Another Veterinary Series

On page 10 of this issue appears the first article in the sixth series of Dr. E. E. Wegner's presentation of important veterinary subjects for readers of this paper. The new series will take up the important subject of "Infectious Diseases." This is one of the most important subjects with which the farmer must contend. Dr. Wegner, who is dean of the college of veterinary science at the State College of Washington, is a past master in veterinary science, and is unusual in his ability to so describe ailments, both as to causes and remedies, that any one can understand and benefit from his advice. A weekly study of his articles would give a reader a fund of invaluable information. Those who clip these articles each week and paste them in a scrapbook, properly indexed, will have available for instant use practical information that may save the lives of valuable animals that would otherwise be lost, or prevent injury to those that might otherwise become useless. Do not fail to read this first article in series six, on page 10, this week.

Dr. Wegner.

Inland Empire Dairymen Meet

"We hung on, kept a stiff upper lip and have won out," Vice President Charles Wagner told producers last Saturday in closing a recital of the inside facts of the present "milk war" in Spokane between the distributors and the Inland Empire Milk Producers' association. The statement was made at the association's annual meeting, when Mr. Wagner was defending the board of directors and the management for their method of conducting the fight against the big distributors since the producers' byproducts plant opened in Spokane last August.

Mr. Wagner admitted that the association had been losing money while selling milk at 10 cents per quart, but declared that it had been necessary in order to win the battle.

"When we entered this fight it was under instructions from you to whip the distributors into line if it took every dollar we had," Mr. Wagner told the dairymen present. "We have won, and the cost is reasonable."

He said that if the management and the directors had told the members of the association exactly what the situation was the information would have leaked out and have been used by the big distributors as a further weapon with which to break the association if possible.

It was brought out at the meeting that the price paid to the producers by the association for their milk prior to December was $2.46 per hundred or more; that the price was cut to $2 for December and to $1.75 for January. Referring to these decreases, Mr. Wagner declared that they were made in order to absorb the losses that had been accumulated and that the February checks should be almost back to normal.

The statement by Mr. Wagner was precipitated by the declaration of Silas Cook, a former organizer for the association, that the management was paying the producer for his milk one month with the money received from the milk of the following month.

Under present arrangements the large milk distributors in Spokane, with one exception, are under contract to buy nearly all of their milk from the producers' association at a price of $2.85 per hundred pounds net to the association. This agreement was entered into three weeks ago, following which the price of milk in Spokane was raised from 10 cents to 13 cents per bottled quart, delivered. Thus the milk producers, for the first time in the history of the Inland Empire associations, have something to say about the price received by them for their milk.

Manager A. A. Newbery reported that since the milk plant was put into operation last August 6,488,000 pounds of milk had passed through it up to February 1, at a cost of operation and management of $27,286. Sales of milk totaled $158,812. He said that the amount of milk handled had steadily increased from 220,117 pounds in August to 1,612,928 pounds in January. He reported a membership of 725 producers, as against only about 300 when the association decided last June to establish its own milk plant in Spokane.

Cut Tractor Prices

One of the farmer's "five points," as presented to the recent agricultural conference in Washington, D. C., and to President Harding, was that there must be a price leveling between what the farmer sells and what he must buy. It is gratifying to discover occasional industries in which this leveling process is already under way.

Recently the Ford company announced a reduction of $230 on the Fordson tractor. Comes now the International Harvester company with the announcement that they are making a corresponding reduction. As reported before, the Fordson tractor was $625 f. o. b. Detroit. It is now $395. The factory price of the 8-16 horsepower International tractor, with regular wheels, clutch pulleys and angle lugs, has been $900. It is now announced as $670. The $900 10-20 horsepower Titan tractor, with regular wheels, friction clutch pulley and angle lugs, is now quoted at $700.

The International company apparently desires to go the Ford concern one better, for it offers free to every farmer who purchases one of the Titan tractors for delivery on or before May 1 a three-bottom P. & O. plow. A two-furrow plow goes with the smaller tractor. If the purchaser already owns a suitable plow he may obtain instead a tractor disk harrow.

To what extent these reductions indicate a general reduction in the price of farm machinery is uncertain, but THE FARMER repeats with emphasis, its "first point"—that prices must be leveled before prosperity can return to this country.

Livestock Conference

The annual northwest live stock conference will be held in Spokane next week, beginning Monday morning, February 20, and closing Wednesday evening. A program of unusual interest is announced, including speakers of prominence and subjects of importance. Among the speakers will be Lester Armour of Chicago, whose subject will be the general live stock outlook. Of special interest will be the address by President J. A. Scollard of the United Dairy Associations of Washington, an association operating largely in western Washington and one of the most successful of its kind in America.

On Tuesday, February 21, will occur the first annual swine sale of the Western Royal Swine Breeders' association, when about 70 head, representing nearly all of the common breeds, were offered. On the following day, Wednesday, will occur the annual consignment sale of the Pacific Northwest Shorthorn Breeders' association. The day following the conference there will be held at Hercules farm, near Sprague, Wash., the third annual sale of Hercules Shorthorns by the Day & Rothrock company.

Those interested in the purchase of Shorthorn breeding stock will have a three-sale circuit at this time, as the sale of A. D. Dunn at Wapato, Wash., in the Yakima valley, occurs on the next day, February 24.

OUR GUARANTEE TO SUBSCRIBERS.

Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unused portion of the amount paid for the subscription will be refunded. You must be satisfied.

Entered as second-class matter, January 13, 1914, at the postoffice at Spokane, Washington, under the act of March 3, 1879.

GUARANTEE OF ADVERTISEMENTS

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible bankrupts. Complaints must be sent to us within 30 days from the date of the transaction and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of diseasee in stock sold through these columns.

Should Grow Better Potatoes

There is a great opportunity for the farmers of this state to produce a higher quality of potatoes than they frequently do. Unfortunately, the average farm potato patch is seldom entirely free from disease of one kind or another. Very often it is seriously affected, cutting down the yield and reducing the quality of the product.

The extension division of the State College of Washington is doing a great deal to assist the farmers of the state in removing potato troubles from their fields. The college extension plant pathologist, Mr. Zundel, is soon to begin a state-wide campaign, during which he will visit many sections of the state and bring before the local farmers the information necessary to improve their potato production. Methods of selecting seed as nearly disease-free as possible will be illustrated and methods of seed treatment emphasized. Later many field demonstrations will be held in which the symptoms of disease in the plants will be described and illustrated and the method of rogueing made clear.

The farmers of the state, whether they are growing potatoes merely for their own use or for market, should cooperate in this movement and thereby benefit from it.

Orchard Clean-Up Campaign

The orchard clean-up campaign that is being carried on in different parts of western Washington is being met with favor by orchard owners whose trees need attention, according to Charles L. Robinson, state supervisor of horticulture.

In most cases the rundown condition of the orchard is due to a lack of proper equipment for spraying and pruning.

In many cases, however, it is due to a lack of knowledge of the proper methods of caring for fruit trees.

The orchard in western Washington is usually a backyard affair or it is planted on a city lot. Where it is not the main issue such as is the case in eastern Washington, there is apt to be more neglected orchards.

C. A. Huntley reports that he is well pleased with the attitude of the orchardists wherever approached on the subject, and all have been more than willing to do their part of the cleaning up when the plan is outlined before them.

Cleaning Up Fairs

By refusing to pass a resolution which indorsed games of chance at the state fair and other fairs, the Washington wool growers, at their annual convention, have done themselves great credit. It is true that the resolution, as presented, urged the plea that Washington made blankets could be disposed of through the game of chance. But this deceived no one.

The principle is the same, whether the thing gambled for is a blanket, a kewpie or a box of cheap candy. It is principally children and young people whose characters are in the formative periods who are caught by the alleged chance to get something for practically nothing. The "chance" is generally a long one, even if the game is on the square, often less than one to a hundred. They simply give a band of grafters an opportunity to prey on the public and detract from the high character of the fair. They center much of the interest in these demoralizing games when it should and could just as easily be drawn in the direction of the live stock and agricultural exhibits and clean sports.

A Live Farm Bureau.

A live county farm bureau can no more exist without aiding its members in a business way, cooperatively, than can a live man enjoy health without a sufficient supply of wholesome food, and wholesome food for the county bureau means dollars and cents in the pockets of its members as well as the bread of better production methods in their minds.

It is not at all surprising, therefore, to find county farm bureaus entering into pooling arrangements for purchasing supplies. For example: Fifteen community pool leaders met the other day with County Agent Patton and T. S. Brown, secretary of the Spokane county farm bureau. It was decided to pool orders for many products required on the farms this year. The campaign will start immediately by pooling orders for spray oil for nearly $20,000. Orders amounting to more than $200,000 on various supplies will be pooled.

Secretary Brown says: "We will later pool orders for the strawberry supplies. We can already see that about 18 carloads of spray oil will be required. This order will be the first one. The project heads are sticking together, as they can see it is to their advantage. Where we get the prices we think are right, we will purchase from dealers here."

Part of the Plan

"All partial evil is universal good," Pope's line reminds us. While some of us are fretting because of the never-ceasing drift of the youth of the farm to the city, where its vigor seems to rapidly disappear, Emily Hoag, economist, has written: "The transplanting of youth from farm life to city life appears to be not only a process highly essential to national virility, but an inevitable process."

It well may seem that this constant tide of new, strong, clean blood, so vitalizing to the city's life, is not a total waste when its vigor is tempered by the infusion of the blood of the cities; that the stronger, fresher blood can not but leave the dominant influence for a time, in the amalgamation of the two currents of life; that the individual's transference to the city, at the cost to him of stronger ties exchanged for weaker, of colder, impersonal relationships for the closer, simpler, more loyal ones, of sentiment for disillusion and the zest of life for ennui, are somewhat made up to the human race by benefits to the city populace. It is the old, pathetic story, it seems, of the sacrifice of the individual's happiness to the race's renewal, where one must give way.

It Is Now Too Late

Presently we shall be going out into the garden lot to begin preparation for the season's vegetable crops. Most of us, however, are beginning too late. Gardening should have begun last fall, as soon as the vegetables of last year were harvested.

Right now, while we are impressed with the need of it, is a good time to resolve to prepare our garden soil next fall for a good crop the following year. It should be plowed and cultivated well, so as to permit the moisture to sink deep. It should be well fertilized at that time so as to give the manure time to rot well before it will be needed by the plants in the spring.

Put down on your September calendar right now a note that will remind you of this very essential task.

State Farm News

The Cowlitz County Holstein-Friesian club held its annual meeting January 16 in the office of the county agent at Kelso and reelected all its officers for the ensuing year. S. V. Butchart of the state association outlined activities planned by the state organization. The Cowlitz club will urge the organization of calf clubs this year. The officers are: H. G. Huntington, Castle Rock, president; J. E. Smearman, Woodland, vice president; John Bogart, Woodland, secretary-treasurer; A. E. Raglin and Edward Johnson, Castle Rock, directors.

* * *

Black currants must go from Challam county—that is the edict of the department of agriculture, given by H. N. Putnam, from Berkeley, Cal., who visited Port Angeles recently. The black currants act as host to white pine blister rust and as a spreader. Deputy Horticulturist Stephen Land declares that there are few black currants in the county.

* * *

A survey of live stock in Grays Harbor county, conducted by the county agent, has yielded the following information from the 95 farms which have been canvassed: Forty-seven farmers own or use purebred dairy sires, while seven use or own cross-breds, 46 use grades and two use scrubs. The breeding females are listed as follows: One hundred twenty-two purebreds, 16 cross-breds, 476 grades, or a total of 783. There are 80 bulls owned for this number of cows, approximately an average of one bull for every 10 cows.

* * *

A. R. Badger of the St. Helens Incubator company, with a factory on Ford's prairie, in Lewis county, has announced that his company will this spring hatch 100,000 chicks, for which most of the orders have been booked. Two thousand White Leghorn chickens are kept at the factory grounds. Several other utility breeds of birds are kept also.

* * *

George Spaulding of Montesano has reported to County Agent Cowan of Grays Harbor county the fine results he obtained last year in experiments he conducted at his Satsop valley farm to determine the value of potash as a fertilizer for potatoes. He planted two rows, each 220 feet long, with 18 pounds of potatoes to the row. One row, not fertilized, produced 317 pounds of potatoes of an inferior grade. The fertilized row produced 428 pounds of excellent potatoes.

* * *

Edward Valentine and W. J. Berns, prominent Wynooche valley farmers and dairymen, have purchased a yearling Holstein bull from William Todd & Sons of Yakima. The animal was selected by County Agent Cowan. The bull, shown in the senior bull calf class at Portland last fall, won third place.

* * *

The greatest rush of applications to purchase timber that his office has experienced in a year and a half is reported by Clark V. Savidge, state land commissioner at Olympia, during January. So many applications were filed that in order to get all of the timber in the April land sale, which closed February 5, Commissioner Savidge found it necessary to employ three extra crews of timber cruisers. This activity is taken as proof of the stability of the revival in the lumber industry. The applications are scattered over the west side of the state.

* * *

Mr. and Mrs. Alfred J. Baker have sold a tract of 15 acres south of Monitor for a consideration of $6000, to Mr. and Mrs. F. A. Wood. The land is partly improved with young orchard. A 29-acre tract west of Cashmere was sold for $12,000 to Fred Helley.

* * *

Two hundred acres of logged-off land 12 miles up the Wishkah valley, sold by the Washington Colonization company to Guy R. Batterton of Seattle, will be stocked next spring with goats, says an Aberdeen report. Batterton says the climate here is ideal for goat raising, and anticipates extension of this branch of the live stock industry.

* * *

C. B. Sherwood's cows at Satsop are eating sunflowers this winter and thriving on the diet. Last summer Mr. Sherwood planted a quarter acre to this crop and got a yield at the rate of 18 tons to the acre. The flowers make fine silage and the cows seem to like it well.

* * *

Heavy tonnage of fruits and vegetables was shipped out of Walla Walla valley in 1921, according to the annual report of J. B. Wiley, district horticulturist. The report shows 967 cars of apples, 375 cars of prunes and 10 cars of watermelons out of this county alone.

The report shows 19 carloads of apples were made into byproducts.

* * *

Net sales totaling $1,053,111.53 were made by the Bellingham and Lynden plants of the dairy association in 1921, according to figures compiled by Manager C. C. Davis. The association, which has 1651 members and 11,776 cows signed up, sold last year 2,220,668 pounds of butter, representing more than 100 carloads, receiving an average price of 40 3-5 cents a pound. The association, beginning in May, sold 1,295,141 pounds of powdered milk. The average price paid for butterfat for the year was 45 1-3 cents a pound.

With a capacity large enough to take care of 30,000 pounds of milk a day Lynden's cheese factory was recently opened by the Whatcom County Dairymen's association. A total of 1157 pounds of cheese was turned out in one day.

Coming Events of Interest

Feb. 15-17—W. Wash. Horticultural assoc., Mt. Vernon.
Feb. 18—Carlton road opening meet, Chehalis.
Feb. 18—Hugh Walter Poland China sale, Yakima.
Feb. 20-22—Northwest live stock convention, Spokane.
Feb. 20-21—Western Royal swine sale, Spokane.
Feb. 22—Shorthorn consignment sale, Spokane.
Feb. 23—Day & Rothrock Shorthorn sale, Sprague.
Feb. 24—A. D. Dunn Shorthorn sale, Wapato.
Mar. 8—F. Sinnes Berkshire sale, Prosser.
Mar. 22—Shorthorn consignment sale, Portland.
March 7—Holstein-Friesian Ass'n meet, Seattle.
June 7-9—Union live stock show, Union, Ore.
March 9—Stevens county live stock sale, Chewelah.
July 27-28—Whatcom co. Guernsey gallop, Bellingham.

FARM BUSINESS AND MARKETS OUTLOOK

January was a constructive month in the farmer's markets. Hog prices averaged over $8 per hundred pounds at Chicago, which is at least $1 higher than seemed probable 60 days ago, and the top of the market is now back to $10. Fortunately, too, the higher level was reached while farmers had many hogs still to be sold so that they will receive the benefit of it.

The advances in the sheep, lamb and wool markets have healed many of the wounds received a year ago by those engaged in the sheep industry.

Steers are paying for their board in most cases and the cattle market appears about ready to follow the upturn in hogs and lambs.

Butter and eggs have not performed so well in the last 30 days as production has shifted in that direction, but they are still on a paying basis.

After slumbering for weeks, the bullish situation in wheat has begun to manifest itself and prices reached the highest level in four months.

Farmers are selling corn at the most rapid rate ever known, most of it bringing 5 to 10 cents a bushel more than was paid 10 weeks ago and buyers are greedy for it, as they realize that it is on the bargain counter.

Oats and rye have been slow to respond, but both of these grains will ultimately follow the course of the rest of the list.

A number of farm commodities are now bringing nearly as much and in some cases even more than they did at this time last year.

Costs of production have decreased so that the farmer's net return on such products is much more satisfying than a year ago.

Count your blessings.

MEAT SUPPLY DIMINISHING

Predictions that the meat supply would diminish during 1922 have made good thus far. In every class of live stock January receipts at the seven leading markets were the lightest for that month in more than five years. The following table tells the story:

Month	Cattle	Hogs	Sheep
January, 1922	784,000	2,399,000	914,000
January, 1921	865,000	2,692,000	1,016,000
January, 1920	1,099,000	3,158,000	949,000
January, 1919	1,256,000	3,624,000	1,011,000
January, 1918	1,048,000	2,720,000	948,000
January, 1917	996,000	3,304,000	1,121,000

These markets are representative of the total supply for the entire country and show why the hog and lamb markets have been booming while reduced beef consumption explains the laggard behavior of the cattle market.

BETTER TONE IN CATTLE MARKET.

Cattle market receipts decreased in the last few days and gave that division of the trade an opportunity to get on its feet. Beef consumption has not increased noticeably but panicky sellers of half finished steers are less numerous. As the fat cattle market is showing more strength and most of the steers being sold have paid for their feed, those who were fearful have regained some confidence. Always those who carry cattle for the spring market are of the "strong-handed" sort who refuse to let go when the market is temporarily depressed. Young cattle able to make substantial growth are being held back as feedlots can not be refilled at prices equal to those which some of the light killing steers are bringing. It is generally believed that the low point of the winter has been passed and that another month or two will bring substantially higher prices for finished steers.

No strictly prime cattle are arriving even at Chicago.

BROAD INTEREST IN STOCK CATTLE.

Commission house mails are freighted with inquiries as to prospective values upon stock cattle a month or two hence. Some fleshy steers are going into feedlots, but the bulk of shipments to the country are on the lightweight order, many of them evidently intended to go on grass. With the fat cattle market showing a firmer tone, prices upon stockers and feeders have advanced slightly and there appears to be a little prospect of buying them much cheaper during the rest of the winter and spring.

HOG MARKET HEALTHY.

Although the advance in hog prices gives the market a topheavy appearance, the underlying conditions are healthy. Indications that hogs were being held back early in the season are contradicted by the volume of current receipts, and by private estimates showing a decrease in the number of hogs on farms compared with a year ago. There is still a large supply to be marketed, however, and liberal receipts are in prospect for February, which may cause the market to lose some of its recent bloom.

Stocks of lard at the principal packing points in the middle west increased only 11,000,000 pounds during January and were 28,000,000 pounds on February 1 compared with 48,000,000 pounds a year ago.

COLORADO LAMBS NEXT.

Fed western lambs from cornbelt feedlots have constituted the bulk of the supply for a number of weeks, but Colorado lambs are now coming freely and the movement from that state is expected to reach heavy volume in the next two or three weeks. Although most of the lambs went into feedlots late in the season, receipts at Denver during January showed an increase of about 75 per cent over January a year ago.

The $14 lamb has appeared several times at Chicago with the top at $14.30. Partly finished stuff is selling at only a moderate discount. The market appears topheavy, but the Colorado supply usually is fed upon the market gradually and since it must furnish the bulk of receipts until June no severe break is anticipated. Purchases of lambs for feeding or shearing at prevailing levels, however, are fraught with danger. It is reported that speculators have made a cleanup by purchasing at low prices in the range country in sections where market news evidently failed to penetrate.

FARM CHUNK SEASON OPENS.

Lower prices at Chicago attracted fewer horses and more buyers and part of the recent loss was restored. St. Louis is absorbing liberal runs from week to week, but prices are comparatively low.

St. Louis—Medium and good drafters, $110-225; medium to good chunks, $40-100; southern chunks, $35-80; draft mules, $150-200; sugar mules, $150-185; mine mules, $85-165; cotton mules, $60-165; farm mules, $120-150.

ANOTHER SPURT IN WOOL.

Wool prices at the government auction on February 2 showed an advance of 25 per cent over the sale early in January. The market became less active in the last week or two, but developed life again, owing to the outcome of the government sale, and prices upon stocks in private hands advanced 2 to 3 cents higher than a week ago. In the west the new clip is being contracted at prices as high as 33 cents. Foreign auctions have continued strong, especially upon merinos, for which Americans were bidding as they are not far from an import basis, but most purchases are to be held until the permanent tariff has been enacted.

In some quarters a belief is growing that the advance in the market has about spent its force.

EUROPE ANXIOUS FOR WHEAT

A profound change occurred in the wheat market in the last 10 days. The Argentine market, which has been declining and a cause of weakness in North American and European markets, suddenly turned strong and led an advance in which all markets participated. Heavy European buying in the Argentine seems to have initiated the movement.

In the long period from the middle of September to the end of December during which prices maintained a downward course most of the time, European buyers failed to provide adequately for their requirements. There was widespread lack of confidence in the future stability of values and propaganda that European needs were small was used to depress prices still further. Stocks of cash wheat abroad declined to small proportions. Liverpool stocks, according to latest reports, are only 760,000 bushels compared with 6,900,000 bushels at this time a year ago.

European buyers finally have been forced to enter the market at a time when no wheat was pressing for sale in any country and prices have advanced rapidly. The North American market lagged at first, but eventually hard winter wheat was cheaper than either Argentine or Canadian wheat, deflecting export business in this direction and a rapid advance in our own market followed. In the last week over 6,000,000 bushels of hard winter, durum and Manitoba wheat have been sold abroad, and about 2,000,000 bushels of rye sold from Baltimore.

Prices have advanced over 20 cents from the low point of the season and are now at the highest level since early October. Reactions may occur at any time, but it is believed that the strength of underlying conditions has not been exhausted by any means and that prices will advance still further in the coming months.

WHEAT CROP SCARE NEAR.

Within a month growing weather may be experienced in the drought stricken sections of Kansas and Oklahoma, which will make more apparent the severe damage to new winter wheat as a result of the prolonged dry spell. In western Kansas it is said that 50 per cent of the wheat is not showing above the ground. In Nebraska and some other sections, wheat fields are covered with ice and injury from this cause is feared. It is generally believed the average condition is no better at present than it was at the time of the last official report. It is believed that acreage abandonment in the spring will be unusually heavy.

MOUNTAIN OF OATS DOESN'T MELT.

The huge mountain of 68,000,000 bushels of oats in the visible supply has decreased only 2,000,000 bushels in the last three months. Farm stocks are unusually light according to private reports, and some normal surplus sections are said to be going elsewhere for supplies. Nevertheless, the disappearance of oats from primary markets into consumptive channels is disappointing and this grain has made only a small response to the upturn in wheat.

CASH GRAIN MARKETS.

The range of cash grain prices for the week ending February 8 was as follows:

Chicago—Wheat—No. 3 red, $1.27@1.29 3-4; No. 2 hard, $1.18 1-4@1.28 1-4.

Corn—No. 2 mixed, 49 1-2@54c; No. 3, 48 1-2@52 3-4c; No. 4, 46 1-2@51c; No. 2 yellow, 49 3-4@54c; No. 3, 48@53c; No. 4, 46 1-2@51 1-2c; No. 2 white, 49 1-2@54c; No. 3, 48 3-4@54c; No. 4, 46 1-2@51c.

Oats—No. 2 white, 36 3-4@39 3-4c; No. 3, 34 1-4@38 1-4c; No. 4, 33@35 1-2c. Barley—50@66c. Rye—87 1-2@91 1-2c.

SEED MARKETS LOOK ROBUST.

Both clover and timothy seed markets show sustained strength and since the spring demand is on the horizon, advances in values are much more probable than declines. At Toledo receipts of clover for the season to date have been about 30 per cent more than the average of the preceding four years.

Toledo, per bushel—Prime red clover, $14.60; prime timothy, $3.25; prime alsike, $12.05@12.15.

LOWER PRICES ATTRACT FEED BUYERS.

All of the recent decline in wheat feed prices has now been recovered. Lower prices attracted buyers and the advance in wheat also helped. Jobbers are reselling at prices below mill quotations. Near capacity operations by corn industries are making gluten feed and hominy feed abundant.

POOR HAY HARD TO SELL.

Light receipts serve to maintain prices at most hay markets, but Kansas City has just received the largest run in a number of months and prices were reduced. Low grades are relatively abundant and are difficult to move from distributing markets even at a big discount. Alfalfa hay remains at a high premium with prairie hay most difficult to sell. Price fluctuations for the most part are traveling a narrow range.

Prices per ton in carlots:

Chicago—No. 1 timothy, $21@22; No. 2, $18@19; No. 1 light clover mixed, $19@20; No. 2 timothy, $14@15; No. 1 clover mixed, $17@18; No. 1 clover, $16@17; No. 1 alfalfa, $15@23; upland prairie, $12@16; rye straw, $14@15; oat and wheat straw, $11@13.

EGG MARKET ERRATIC

Egg markets still fluctuate violently, although over a smaller range than in early January. Weather conditions will continue as the dominating influence for several weeks. The supply of eggs during January at the four leading cities was 20 per cent larger than a year ago. Nevertheless, cold storage holdings at these four markets decreased much more rapidly than in January, 1921, pointing to extremely heavy consumption. Receipts of dressed poultry have fallen off in the last month and the addition to cold storage holdings in January was slightly smaller than in January, 1921. Total stocks at the four leading cities on February 1 were more than 72,000,000 pounds.

BUTTER MARKET MORE STABLE.

After weeks of rapid fluctuation, the butter market became relatively stable during the last week. Consumptive demand has increased as a result of lower prices and supplies have been more closely cleaned up. Heavy arrivals of New Zealand, Australian and Danish butter at New York, and of Australian at San Francisco presumably for shipment to New York, and lower quotations on the Danish market made the tone in New York and Philadelphia less firm than in Chicago.

CHEESE MARKET FIRM.

Cheese markets failed to decline when the butter prices melted away during December and January. As the butter market is on a firmer basis, fears of an early decline in cheese markets have largely dissipated. Country cheese markets have been strong and distributing markets firm with constant demand for immediate consumption.

Prices for No. 1 American fresh cheese on February 8 were: Chicago—Twins, 20 1-2@21c; flats, 20 3-4@21 1-4c; S. Daisies, 21@22c; D. Daisies, 20 1-2@21c; Longhorns, 21@22c; square prints, 23@24c.

FRUITS AND VEGETABLES.

Potato markets have been unsettled recently with the demand and the movement at country shipping points relatively slow. Colorado and Idaho continue prominent as shippers with Maine in the lead at the present time and Minnesota a big factor. Northern

(Continued on page twenty.)

Little Journeys to Market

HOW CROP ESTIMATES ARE MADE.

At regular intervals for more than 50 years the United States department of agriculture has been estimating the acreage, condition and yield of various crops and the number of live stock on farms.

The evidence upon which these estimates are based is obtained through a group of traveling agents of the department, statistical agents assigned to each state and a number of voluntary correspondents who report upon conditions in a county, a township or upon their individual farms.

Since the estimates upon crops in which there is speculation, such as the cereals and cotton, may have a profound effect upon prices when they are issued, the information is closely guarded until a definite date, when it is made available for every one. The reports from the voluntary correspondents are sent to the department in sealed envelopes, while the reports from the field agents and state statisticians are sent to the secretary in envelopes especially marked and locked in a safe. The combination for opening this safe is known only to the secretary and the assistant secretary of agriculture.

The final estimates are made up each month by the crop reporting board of five members from the crop reporting division of the department. The personnel of the board changes each month. While it is in session on the day that the report is to be issued, the room is locked, no one is allowed to leave or enter and telephones are disconnected. When the board has assembled, the members are given the figures in parallel columns, which have been made up from the reports of the several classes of correspondents. With these several separate estimates for each state before him, each member computes his own estimate of the acreage, condition or yield of the crop or number of farm animals. These estimates by each member are compared and discussed and the final figures agreed upon.

When the report has been completed, copies of it are placed face downward on the table in the crop reporting room and newspaper correspondents and representatives of the Western Union and Postal Telegraph companies are admitted a few minutes before the announced hour for the release of the report. When the clock ticks the time for the release, each of these men picks up a copy of the report and rushes to the nearest telephone or telegraph office and in a few minutes the news has been announced almost simultaneously throughout the entire United States. Copies are also mailed on the same day to interested parties and printed cards are sent out to be displayed in the 77,000 postoffices, where they can be seen by every one.

Davis-Butchart Holstein Sale

Strengthens Confidence of Believers in the Dairy Cow

By GEORGE N. ANGELL.

A sale to strengthen the confidence of believers in the dairy cow, a sale which scattered widely over the state the "Bessie" breeding that has proved so good both in the ring and at the pail, but which left in the Yakima valley the sire himself and enough of his offspring and cows bred to him to make a fine foundation on which breeders of that district can build again, was that which dispersed the Holstein herds of H. C. Davis and Butchart Brothers, at the Davis farm near Granger February 6 and 7—the first two-day sale in the Pacific northwest. There were buyers present from Cowlitz, Jefferson, King, Benton, Klickitat, Walla Walla and Spokane counties, in addition to Yakima, and, while there were no sales at extraordinarily high prices, the general average for 123 head—$230—was considered excellent for the times, and of the total of $28,430, more than one-third was paid in cash. Butchart Brothers, who are dissolving partnership, reaped the benefit of having their stock in better sale condition and of official testing, for their average for 44 head was $290, a total of $12,745. This was Mr. Davis' third dispersal sale since 1913, and his average for 70 head was $205, a total of $14,410. He retains Sir Bessie Fobes Tritomia and a few females, and is expected to build up another herd. Butchart Brothers held a farm sale a few days later, but their plans are uncertain. Stanley Butchart, senior member of the firm and secretary of the state Holstein-Friesian association, retains his interest in Chief of the Ormsbys.

Heaviest purchaser and purchaser of the highest priced individual is Lloyd Garretson of Yakima, who paid $3320 cash for nine animals picked with a discriminating eye and including Chimacum Wayne Pontiac Burke 2d, a beautiful heifer of Bishop breeding, on which a junior 4-year-old record of 30.14 pounds in seven days was finished shortly before the sale. She cost Mr. Garretson $850. He paid $625 for a 27-pound junior 4-year-old daughter of Mutual Fobes Longfield De Kol and Maldeta Canary Mercedes; $515 for a 21-pound daughter of Chimacum King Korndyke Sadie Vale, and smaller amounts for six others. The animals will be added to the herd at his show place, Painted Rocks ranch, near Yakima.

R. L. Rice of Grandview gave $815 for Princess Pietertje Artis, new seven-day champion of the Yakima valley, on which Percy Butchart, who has had charge of the testing, made 31.5 pounds just before the sale. Princess topped the first day's selling, and was second high individual of the sale.

John Bogart of Woodland was second highest purchaser. He gave $2600 for 12 head of varying ages. William Bishop of Chimacum paid $2100 for seven head, including a Bessie bred 4-year-old bred to Bessie, at $530; a 3-year-old bred to Chief of the Ormsbys at $450, and several of his own line of breeding. John L. Smith of Spokane paid $2085 for nine head, including one of the bargains of the sale, a 6-year-old granddaughter of King Segis 10th, out of a granddaughter of Colantha Johanna Lad, due in May by the Bessie bull, at $420. C. G. Sprong bid in six for S. E. Chaffee of Sunnyside at $1100 and William Elmer of Trout Lake paid $1060 for four. Elmer is one of a group of five breeders who are stirring things up for the Holstein breed in Klickitat county and who took home 12 head of purebreds at a total cost of $3090. His brother, C. A. Elmer, obtained a granddaughter of King of the Pontiacs, due in April by the Bessie bull, for $430.

County Club Leader E. C. Scott and local club leaders were on hand to secure calves for the Moxee Calf club, which paid $1240 for eight head, and for another club in process of formation, but not yet named, near Ahtanum and Wiley City. F. R. Beals of Tillamook, Ore., who retained his Bessie bull from the recent deal with Carnation, and who had in his barn another group of 20 or 25 daughters and granddaughters of the bull soon after the Carnation consignment left the farm, came the greatest distance of any buyer, but took home only two head, both youngsters.

Ralph H. Tuttle of Walla Walla, president of his county Holstein association, bought two daughters of Friday Harbor Cornucopia for $415. Homer Splawn, younger son of the late "Jack" Splawn, who brought the first purebred cattle into Yakima, bid in four youngsters for $650. E. O. Fawcett of Taranaki farms, Prosser, secured the prettiest heifer in the sale, a daughter of Sir Korndyke Ormsby Piebe, the Todd bull, and Maldeta Canary Mercedes, the best known cow for both show and production the valley has produced. The calf was born last July. She brought $530, and will make a nice addition to the six daughters of the same bull purchased some time ago by E. F. Benson for $4500. Maldeta herself, now 13 years old, but in calf to Sir Bessie and apparently good for several years of work, went to Drake & Duffield of Moxee for $340. Her three daughters brought $1455 and a grandson $275. The latter went to John Bogart. He is a show calf by a son of Sir Korndyke Ormsby Piebe and Cascade Jessie, a prospective 1250-pound 4-year-old, and out of the daughter of Mutual Fobes and Maldeta, for which Garretson paid $625. The Methow Valley Live Stock company of Seattle bid in three head at $645, and three breeders from Touchet obtained several head.

Other buyers are all from Yakima, many of them from the vicinity of Granger. The following list includes only catalogued females, four of them animals which were reserved from the last E. B. Marks sale and consigned to this one by Mrs. Marks. Mr. Davis sold two or three extras, Dr. L. G. Stickney of Toppenish three, Louis Malmgren of Granger four. There was very little demand for bulls. D. F. Nugent sold a grown son of the Bessie bull for $100 and Mrs. Marks obtained $175 for a March Bessie son out of a show daughter of Sir Ormsby Burke Segis. One or two of lesser breeding went still lower. Auctioneer George Gue was assisted by George Gochnour and W. C. Hobson.

The detailed report of the sales, showing purchaser and price of each animal will be given next week.

Prize Gilt Will Help Clear Farm

(Continued from page one.)

from a son of Mr. Phelps' herd sire, a big type boar, bred by a well-known Iowa breeder, and a really great animal. The gilt's mother is of Wildwood Princess breeding, what Mr. Pelps considers his best sow. She is of a prolific strain, and will farrow in March.

Mr. Hall has shown by the prize letter he wrote that he has good ideas about the breeding and care of swine. He was quite willing to keep account of costs and income, as required by THE FARMER. His indomitable courage, in attemmpting to hew out a farm from among those stumps, shows that he will "tackle" his breeding problems with the same determination he brings to all his farm activities. I predict his success as a breeder, and if ever a man deserves not only to win the gilt, but to succeed, Mr. Hall is the man.

As announced in last week's issue of The Washington Farmer, the second prize letter in The Washington Farmer's prize pig contest was written by Samuel I. Hopkins of St. John, Whitman county. The third prize letter was written by L. P. Powers of Palouse, also in Whitman county. These letters will be published soon.

When Using Gasoline

By PROFESSOR L. J. SMITH, W. S. C.

1. Never lose sight of the fact that gasoline is dangerous when handled inside any building. Take no chances with this powerful explosive.

2. Gasoline should always be stored in a tight, covered can—never in glassware.

3. Never uncover or use gasoline in a house at night or when there is a fire in the range or fireplace.

4. Never use gasoline for cleaning purposes when using a lamp, except it be an electric light.

5. Keep your gasoline in a can painted red.

6. Never smoke in a garage.

7. Make it a rule to shut off your motor when filling the gas tank at the rear of a car.

8. If you use gasoline by the drum, keep it outside on blocks and have a spigot screwed into the drum, so that it runs out by gravity.

9. Do not try to put out a gasoline fire with water. Smother it with earth or sand. Fire extinguishers which contain the chemical in a water solution only spread a gasoline fire.

Let Dosch protect your prunes, cherries & pears

The Dosch method of insect and disease control with finer quality dusting material plus improved dusting machinery makes it easy to conquer thrip and other enemies of prunes, cherries and pears.

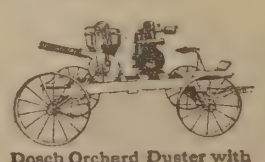
Dosch Dusts Finer Than Flour Particles

Dosch Dusts are finely powdered by new methods so they settle into every crevice, every crack, under the leaves—and penetrate spots so frequently untouched by ordinary means.

Dosch Dusts carry a special "sticker" material that makes the powdered dust stick like glue and gives an even application that leaves no uncovered area of foliage.

Dosch Dusts Are Especially Recommended for Thrips on Prunes, Cherries, and Pears.

Write today for valuable free bulletins about these costly destroyers. These bulletins tell of actual orchard and field results. Get accurate, scientific information from our Research Department regarding your particular problem.



Advantages of Dusting

The Dosch Dusting method is the newest thing in the control of insects and fungous diseases. It takes *one-fifth* the labor, far less time and saves money. No heavy rigs to drag about, no water to haul. Soggy ground is no handicap.

DOSCH DUSTS

The High Water Mark of Footwear

Woman's Slipper

Down in the archives of the United States patent office at Washington, D. C., may be found the registration papers of a trade mark showing a band of red with the lettering, The B. F. Goodrich Rubber Company, Akron, Ohio.

This mark and the government guardianship that goes with it is for our protection and for your protection too. The last thing we do in the making of a Goodrich rubber boot or shoe is to put on this red line around the top.

It is the O. K. finish mark—our signature which if red-signed might well be coupled with the inscription—

Yours for Better Footwear

60,000 dealers and a host of users attest that you can rely on the rubber boot or shoe marked with the red line around the top, to the last ditch.

Woman's Empress

Income Tax

Act Contains Two New Provisions

The following statement is issued by Collector of Internal Revenue Burns Poe for the district of Washington:

The revenue act of 1921 contains two new and important provisions, which are the subject of frequent inquiry. The first relates to the personal exemptions allowed married persons, and the second to the provision requiring that a return be made of gross income of $5000 or more.

The act provides that a married person, living with husband or wife, whose net income for 1921 was $5000 or less shall be allowed a personal exemption of $2500. If the net income of such person was over $5000 the exemption is $2000. Under the revenue act of 1918 the personal exemption allowed a married person was $2000, regardless of the amount of net income. The normal tax rate remains unchanged, 4 per cent on the first $4000 of net income above the exemptions and 8 per cent on the remaining net income.

In order that an income slightly in excess of $5000 shall not be subjected to an inordinately disproportionate tax because of the reduction of the exemption to $2000 thereon, the law provides that such reduction shall not operate to increase the tax, which would be payable if the exemption were $2500, by more than the amount of the net income in excess of $5000.

For example, on a net income of $5010 the tax, without this saving clause, would be $120.40, which is 4 per cent on $3010, the amount of net income less an exemption of $2000. The actual tax is $110.40, computed as follows: From the net income of $5010 is deducted $2500, leaving $2510, the 4 per cent tax on which amounts to $100.40. To this is added $10, "the amount of net income in excess of $5000."

The personal exemptions allowed married persons apply also to the head of a family, a person who supports in one household one or more relatives by blood, marriage or adoption.

Heretofore a person whose net income was less than his exemption ($1000 if single, or $2000 if married) was not required to file a return. Under the revenue act of 1921, if the gross income of an individual equaled or exceeded $5000, or if the combined gross income of a married couple and that of dependent minor children equaled, or exceeded $5000, a return must be filed, regardless of the amount of net income.

"Net income" is gross income, less certain deductions. The fact that allowable deductions from gross income, for business expenses, losses, bad debts, etc., may reduce the net income to an amount below the personal exemptions of $1000 or $2000 does not alter the requirement to file a return of gross income, if such gross income equaled or exceeded $5000.

All returns must be filed by March 15.

Scrap Book

Where is that article you read in one of the papers a few weeks ago that struck you as such a good suggestion that you cut it out and laid it "aside"? Perhaps you laid it where it was brushed away and burned with the daily cleaning of the room. It may be that the clipping was put away somewhere and forgotten. In any case you do not have the idea at hand when you want to refer to it and it might as well have been thrown away.

H. J. Cundy, who owns a farm a few miles out of Republic, Ferry county, Wash., is among the farmers who avert misplacing such details. He keeps a scrapbook for the filing of all articles in his farm paper that appeal to him or which are of particular interest to his farming operations.

Raising Rabbits

It is hard to convince a beginner in the rabbit business that he can obtain as much weight from a litter of six as from one of eight or ten, provided the doe is in good condition and has an abundance of feed. T. A. Howland, a rabbit breeder of Seattle, says that he always kills all over six in each litter. At the end of three months' time the six will weigh as much, if not more, than would the litter of eight, had they been allowed to live. The reason, he says, is because the six have a better chance to grow, get more nourishment from the doe, and are not so crowded in the nest. In some cases where the doe shows exceptional quality her litter is divided and part of them given to a scrub doe, bred the same day. In this way all of her litter is saved, and there is less chance of losing some outstanding individuals.

"If I was going into the business again I would never begin until I had enough money to buy the best stock," declared Mr. Howland. "By starting out right one never has to begin again at the bottom. Most breeders, however, have to learn this lesson by experience since they can not see paying purebred prices at the outset. It is just as easy to learn the business while your good stock is increasing, as it is if you are raising scrub stock.

"In order to be a success in the rabbit game it is necessary to have a live interest in rabbits," continued Mr. Howland. "One must study the details, and know his stock. Rabbit breeding is a complicated undertaking. It is often hard to select the proper matings to make the best show animals, and the breeder must know what he is working for in order to get results."

Mr. Howland suggested the different rabbit magazines as good sources of information for the beginner since their cost is nominal, and they contain up-to-date matter. His own rabbitry consists largely of New Zealand Reds, many of which have won ribbons. One of his rabbits has an exceptionally fine color. A solid red color is very desirable in the New Zealand breed, and is produced only by the mating of the proper individuals.

Form Club to Learn Housekeeping

Ten girls in Cowlitz and Benton counties have joined home management clubs and 10 mothers are enthusiastic over their daughters' ability to keep house. This club was started late this fall by Miss Mabel Greene and Miss Nora Kelley, county club agents, who receive their club plans from Miss M. Minerva Lawrence, home management demonstrator of the state college.

The girls forming this unique club and finishing their work were: In Benton county, Cora E. Houk, White Bluffs, and Martha Bash, Handford; Cowlitz county, Helen Leonard, Luella Klawitter, Gwendlyne Furbish, Mabel Bassett, Bessie Gross, Bertha Bailey and Irene Hett of Kelso and Dee Ruckles of Kalama.

NOWHERE is the need for reducing the cost of production more urgent than in the case of the great staple crops *Corn, Grain, Hay.* These have always been low value per acre crops. Their labor cost factor is high. A double yield per acre involves but little additional labor.

Fertilizers are the direct means to increase yield.

For the best results, fertilizers must be properly balanced.

One-sided fertilization spells soil exhaustion.

Balance the fertilizer with 5 to 10 per cent. of Potash.

There is plenty of it now.

Fordson TRACTORS REDUCED $230

New Price Opens Opportunity to Farmers

IT IS NOW POSSIBLE FOR EVERY FARMER TO HAVE A TRACTOR

The new price on the Fordson is within the reach of all. And, terms of payment can be made upon application to your nearest Fordson dealer.

Every farmer needs a tractor. Fordson is the "Perfect Hired Man." For you it will—

PLOW, DISK, HARROW, THRESH, BALE HAY, SAW WOOD, PUMP WATER, GRADE, PULL STUMPS, FILL YOUR SILO, GRIND YOUR FEED—

and take care of every other power job on the farm, besides saving from 30 to 50 per cent of your time.

Write for free literature. Or ask for an actual free demonstration, which will be made for you without cost or obligation to buy. Please state the principal classes of work you wish to have demonstrated.

Henry Ford Says—

"I have been a farmer all my life, and now I am doing everything possible to cut the cost of farming.

"I think it will help the country to make farm machinery cheaper as spring is coming on."

The Fordson dealer nearest you will make a free demonstration.

"Saved Two-Thirds of Hay; Got One Third More Milk."

That's what J. W. Jamison of Nezperce, Idaho, wrote me last Spring after his first winter with an H-L-F Silo. "I had about 25 tons in the silo," he said in his letter, "and fed nine cows from October 15th to April 19th. I think it is the finest feed I ever fed to cows."

Mr. Jamison thinks that his H-L-F Silo is a fine silo, and easy to build. His silo is 10 by 30 feet, and he and his fourteen-year-old boy built it from the ground up.

3632 H-L-F Silos in use

It takes no expert skill to build an H-L-F Silo. It is simply a double-wall building, practically round, very strong and tight. Every piece cut exactly to fit in our factory.

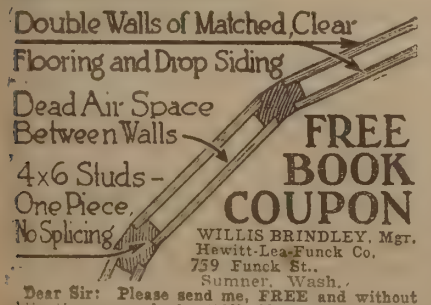
The double-wall feature is fine for western conditions, especially where the summers are dry and hot, because outer wall protects inner wall from sun and weather.

H-L-F Silo

Direct to You at Factory Price

We have no glad-hand men touring the country in automobiles to tell you how to run your business. You can just answer this advertisement, look over our printed matter, and order or not, according to whether the deal looks good to you. In a few places old customers act as local representatives and the small commission we pay them comes from our profit and is charged to advertising. Either way, you get the silo at the factory price.

Big Cut This Year In H-L-F Silo Prices



Prices this year show a cut of $100 or more on the average silo outfit. On every one of the first 300 sold we lose money. You're welcome. If we sell enough silos, we'll make a little on the tail enders.

Carload Price on Single Silo

No matter where you live, you get the carload price on your order for a single silo. That's done by bunching, to form a carload, the orders from nearby points. Terms are $25.00 cash, balance November 1 without interest.

$35 Saved on Early Orders

It saves us money on manufacture and shipment to get orders early. Therefore, on early orders we give a roof free—late orders pay $35.00 for the roof. Better fill out the coupon below, right now when you think of it. It will bring you a book I wrote entitled "All About Silos," with a list of H-L-F Silo owners and a price list—the complete proposition. Come ahead quick with that coupon.

R. F. D..... State.....

Limits the Breeds

A rather unusual ruling has been placed on the settlements of the state land in the White Bluffs-Hanford area of Benton county under the land settlement board. Only the following breeds will be allowed on the land for herd sires, all of which must be registered animals: Holsteins, Duroc Jerseys, and any of the beef breeds of cattle. The ruling, which was compiled by the state department of conservation and development, applies merely to animals that are brought onto the land for breeding purposes.

Before he can purchase his farm unit the settler must comply with other regulations included in the contract, as follows:

"Every contract between the department and the settler shall provide, among other things, that the purchaser shall prepare for cultivation, cultivate, irrigate and develop the land of his unit in a manner which shall meet the approval of the department both as to character of development and kind and variety of crops to be produced; that the purchaser shall keep in good order and repair all buildings, fences, the irrigation system and all other improvements of his farm unit.

"The purchaser shall insure, during the life of his contract with the department, against fire all buildings situated on his farm unit, the policies to be for five years.

Under State Supervision.

"The contract between the purchaser and the department may not be assigned, transferred, or in any way encumbered, without the consent of the department.

"The contract between the purchaser and the department shall provide, that in the event of the failure of the purchaser to comply with any of the terms or conditions of his contract with the department to purchase, the department shall have the right, at its option, without notice, to take possession of the said premises and protect the interest of the state therein; and the purchaser shall forfeit all rights under such contract. All payments made, labor performed, and improvements constructed pursuant to such contract, shall constitute and be deemed rental paid for occupancy. Failure of the department to exercise any option to cancel for any default shall not be deemed a waiver of the right to exercise the option to cancel for any default thereafter on the part of the purchaser.

"The department may, in its discretion, require rotation of irrigation and use of power, or either, among the purchasers and for the purchase within the community.

No Delinquencies.

"Taxes, power bills and assessments and charges of every character must be paid promptly by the purchaser before they become delinquent.

"Every contract between the department and the purchaser shall provide, among other things, that the state shall reserve such easements as in the judgment of the administrative officials of the department may be necessary to provide adequate highways, electric lines, drainage and irrigation ditches and canals for the development of the land settlement project.

"The department deems it to be advisable for approved applicants to make a personal inspection of the land offered for settlement.

"The value of the agricultural land and possessory rights of applicants shall be determined by the department.

"Subsequent to the year 1922, not less than one-half of the area of each unit shall be utilized for the production of feed for live stock to be fed on such farm unit."

Will Resist Freezing

Kale plants which have been acclimated for western Wassington climates have been found to resist freezing and come out in a fairly good condition, according to M. E. McCollum, agronomist of the western Washington experiment station at Puyallup. It was feared by some that growing the plants in a moderate climate continually for a period of years would produce a type that would not stand the heavy freezing that is common in other parts of the state. Although the leaves should never be handled or fed while they are frozen, the arrival of moderate weather will bring the tissues back to their natural state and good condition.

Crossed Plains in 1852

"I see an account occasionally where some old pioneer has passed over the road, who came across the plains in 1870," writes J. C. Hudson of Pullman, Wash., to The Washington Farmer. He continues:

"I wonder what I would be called. I crossed the plains in 1852. Not only that, but I have been half way over about 25 or 30 times. I think I know the road better than any one living now. We had the largest immigrant train that ever crossed the plains. There are but a few left—most all have answered the roll call. We were from Missouri and were going to Oregon or bust, as the saying is, and when we got there we were busted."

Why does any healthy person want to be kicked into wakefulness in the morning?

Many people feel that they have to be agitated into wakefulness in the morning. They think that without the tea or coffee they take in the morning that they will not be able to meet the tasks and duties of the day.

Nothing could be more false than this reasoning. Any doctor can tell you this. For a healthy body does not require a stimulant. It gets all the stimulant it needs from food.

The thein and caffeine found in tea and coffee are irritating to the heart and nervous system. They jolt the nerves into undue activity. The result is a reaction. This is why regular tea and coffee drinkers think they must have their stimulant the first thing in the morning to wind them up for the day.

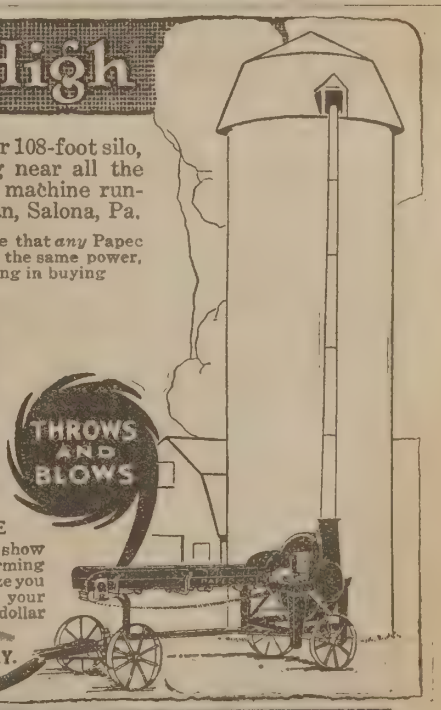
If you will stop using tea and coffee for a week, and drink Postum, the pure cereal beverage instead, it will give Nature an opportunity to rid the system of the irritating substances that harass your nerves, upset digestion, increase your heart action, and make you nervous and irritable.

Many people who have tried Postum say that inside of a week they wake in the morning without that "all gone" feeling that they used to have, and are full of energy, strength and endurance.

Order Postum from your grocer today, and make it according to directions. Your first sip of Postum will surprise and please you.

Postum comes in two forms: Instant Postum (in tins) made instantly in the cup by the addition of boiling water. Postum Cereal (in packages of larger bulk, for those who prefer to make the drink while the meal is being prepared) made by boiling for 20 minutes.

Postum *for* Health
"There's a Reason"



Made by Postum Cereal Co., Inc., Battle Creek, Mich.

No Silo Too High

"We used your 19-inch cutter to fill our 108-foot silo, putting it over the top without using near all the power of a 20-h. p. steam engine, the machine running at normal speed."—E. E. Heckman, Salona, Pa.

No silo is too high for a Papec. We guarantee that *any* Papec Cutter will cut and *elevate more ensilage*, with the same power, than *any* other blower cutter. You can't go wrong in buying

The Powerful PAPEC Ensilage Cutter

The Papec runs easier because it is built simpler. The silage is *thrown* from the knives far up the blower pipe. It is then caught by a powerful air blast concentrated into small diameter that carries over the top of the highest silo.

Farmer's Record and Account Book—FREE

A few entries weekly in this 50-page Book will show you at any time where you stand with your farming business. Write us the size of your silo, or the size you intend to buy, and the name and address of your dealer. We'll mail the Book promptly. Worth a dollar to any farmer. Ask also for *free* Catalog.

Better Feeding

Farmers Can Make Up Rations

By E. B. FITTS, O. A. C.

Feeds vary widely in the proportions of digestible nutrients or actual feed materials they contain. Some feeds have the digestible feed materials in the right balance to meet all the requirements of the animal body for maintenance and for milk production, some have a surplus of carbohydrates and fats and others a surplus of proteins.

Feeds or rations suitable for milk production have a balance of nutritive ratio, which means relationship of proteins to carbohydrates and fats, of from 1 to 5 to 1 to 7. Feeds with a wider balance than 1 to 7 are known as carbohydrate feeds, while those with a balance of less than 1 to 5 are called protein feeds. If a feeder will keep this classification in mind it will aid him in selecting the feeds necessary to make a balanced ration.

The following gives a classification of some of the more important feeds:

Feeds in balance—Clover hay; oats and vetch hay; oats and pea silage; turnips; pumpkins; oats; rye bran.

Carbohydrate feeds—Grain hay; mixed hay; corn silage; carrots; mangels; barley; corn; beet pulp; molasses.

Protein feeds—Alfalfa hay; vetch hay; kale; cabbage; wheat bran; wheat middlings; wheat mill run; oil meal; cotton seed meal; soy bean meal.

Feeds in balance are complete within themselves and can be fed in any amount or in any combination without disturbing the balance or relationship of protein to carbohydrates and fats. If, however, any carbohydrate feed or feeds are used then one or more protein feeds must be included. Conversely any protein feeds used must be balanced by a selection from among the carbohydrate feeds.

The correct amount of each to be used can be accurately determined only by careful computation. A person feeding animals, however, and carefully studying feeds and the needs of his individual animals can soon learn quickly to make the proper feed combinations.

A great need of the dairy industry is the general adoption of a better feeding practice. Rations out of correct balance, if long continued, reduce profits or cause actual loss.

LIFE PRESERVERS FOR LIVE STOCK

By DR. E. E. WEGNER, W. S. C.

INFECTIOUS DISEASES, ARTICLE I.

Bacteria.

One must consider the causes of diseases in order to understand some of the terms that are applied to them. The first great division that is usually made is that of infectious and noninfectious diseases. The former are diseases that are caused by some specific organism, and by that I mean that there are one-celled beings belonging to the plant or animal family that have the power of causing illness of a specific nature when they are allowed to enter the body of a susceptible animal. These organisms do not have the power to cause disease in all species, but only in certain ones. In the case of blackleg, cattle suffer very frequently, while horses are entirely free from it; hogs suffer from hog cholera, but other animals are not affected. This is commonly true of many diseases, but there are a few that are common to many species, such as tuberculosis, which is no respecter of species, though sheep and goats rarely suffer.

Studying the Causes.

It is possible to study certain organisms of disease with a great deal of accuracy, while others are not so easily identified and studied. Certain ones may be isolated and studied under laboratory conditions and by injecting them into suitable animals specific diseases may be produced and from these animals the organisms may be isolated again. Such tests prove the connection of certain bacteria with disease when the disease can be produced again and again by animal injections. Some other diseases are in all probability due to bacteria, but the specific organisms have never been isolated so that they can be studied; it may be that the organisms are too small to be seen with the present microscopes or that they can not be properly stained or for some other reason we are unable to see the individual germs. We may know, however, that bacteria are the cause if we can produce the disease time and again by injecting fluids from the sick animal into a well animal of the same species.

The organism that causes hog cholera has never been seen, but we can cause the disease in a well hog by injecting the fluid part of the blood of a sick hog into the body of a well one. This establishes the fact that in all probability the disease is infectious, but we have not succeeded in actually seeing the germ that causes all the trouble. This is true of many other diseases, but if the evidence is sufficient we classify these diseases as infectious, even if we have not seen the causative agent.

Habits of Bacteria.

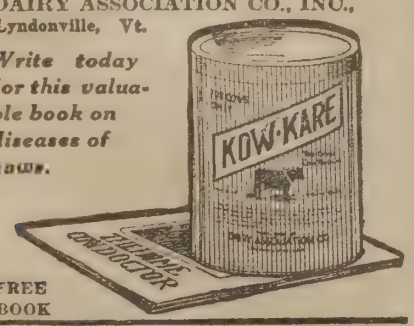
Bacteria vary greatly in their habits and modes of living and abilities to get about from place to place, so that we find a corresponding difference in the rapidity with which different diseases spread. They vary also in their powers of resistance to outside influences, such as heat, cold, light, dryness, etc., so that certain diseases are hard to eradicate from a building or pasture when they have once been planted. It is seen, then, that the different infectious diseases have to be handled in different ways in order to get rid of them when they have once been present on a farm or in a building. Certain germs have the natural ability to form spores or go into a resting stage to remain in that condition until suitable conditions arise for their farther development. This class is very hard to eradicate, as it withstands strong antiseptics, and may live in the ground for years without losing the power to produce disease, only waiting for the opportunity to get into a suitable location in the body of a suitable animal.

All bacteria are not disease producers,

SAVED THREE COWS BY TIMELY AID

Jacob Germann of Farmingdale, Ill., tells of his experience with cow ailments much the same as hundreds of others who take the trouble to write us every year. He says:

"I had three cows this Spring, one had garget and one had milk fever, and one was done up completely from calving and could not get up or walk and I had a veterinarian with no good results. I began feeding Kow-Kare and she is able to go to pasture with the other cows now. I just know I would have lost the three if I had not had your medicine."



D. B. Thomas of Knightville, Utah, had an experience with a barren cow that is just like scores of others who have kept cows on a paying basis with the aid of Kow-Kare. He writes:

"Had a valuable Jersey cow eight years old that had had seven calves. Something went wrong with her after her last calf came, so that for two years she failed to become with calf. Fed her some of your Kow-Kare last January and she was all right the first serving, and long before I had given her the whole package of your Kow-Kare that I purchased."

For the prevention or successful treatment of Barrenness, Abortion, Retained Afterbirth, Scouring, Bunches, Milk Fever, Loss of Appetite, etc., no cow medicine has such a record of constant successes as Kow-Kare. Every cow owner should keep it on hand. **Sold by general stores, feed dealers and druggists at the new reduced prices—65c and $1.25**

You Need a Farm in Canada

If you are to secure that independence, success and prosperity which has been the reward of thousands of American farmers who have preceded you.

¶ These farmers knew of the rich tracts of Canadian Pacific agricultural land for sale in Western Canada at low prices—open prairie, partially wooded or park lands—all virgin, fertile and productive. They knew they could not obtain such lands elsewhere at such prices—at an average of $18 per acre.

¶ They knew that Western Canada has carried away, year by year, first international honors for wheat, oats, barley and livestock.

¶ They knew of the success that had been won by farmers from their own state who had preceded them. They knew that Canadian farm values are steadily increasing and that each year they delayed they would have to pay more to purchase desirable farms.

¶ They wanted larger holdings for their growing families. They knew they could secure sufficient land upon terms unobtainable elsewhere—20 YEARS TO PAY.

¶ As a result, 16,000 American farmers took advantage of their knowledge and moved to Western Canada last year.

¶ In Canada the government and the railroads help the farmer in every possible way. It is to their interest to do so. Taxes are moderate; laws are just; transportation facilities and markets are excellent. Language, social customs, religion, money and other conditions are the same as in the United States.

however, as many of them are of a distinctly different nature. In fact, most bacteria are harmless and only a small proportion are capable of producing disease, only a few will thrive in the animal bodies, as their natural place of living is elsewhere, but the small group that may cause disease when they get into the body is sufficiently active to make life of a susceptible animal uncertain when they are in the vicinity.

VETERINARY

By DR. S. B. NELSON.

Apply Tincture of Iodine.—I have a cow that was taken sick about two weeks ago with sore throat and I bathed it with turpentine and lard and gave her a little strong alum water twice a day. She eats well now, but there is a hard ridge on the left side of her neck five or six inches long. What should I do for it? J. R. L.
Reardan, Wash.

Apply tincture of iodine to the lump morning and evening.

Rubs Off Hair.—I have a horse that rubs the hair from his tail and mane every summer. He keeps this up until cool weather comes. L. M. L.
Sunnyside, Wash.

I think the horse should have a thorough purging. One ounce of aloes and two drams of ginger made into a ball and given to him after he has been starved a day will do this. The tail might be washed with a 1 to 1000 solution of corrosive sublimate and water. This is poisonous and should be kept away from animals and children.

Dehorning Cows.—What is the best way to dehorn cows, saw the horns off or use a dehorner? Should anything be applied to the head afterward to prevent excessive bleeding? I also have a cow that coughs. She is in good health and eats well.
Mabton, Wash. H. B.

As a general practice a dehorner works much better than any other instrument with which to dehorn cows. The horns should be taken off just near the hair line. Brush the hair back, so that you can find it. Many people apply a little tar to the rough edges.

If your cow is in good health I doubt whether there is anything very seriously the matter with her. Animals that are heavy eaters like cows frequently have a little dry, hacking cough.

Cow Has Cough.—I have a heifer that freshened in August. She began to cough when we began to give her mill feed and seems to be getting worse. It is a dry cough, but she does not cough up anything. I dampened her feed, but she refuses to eat it that way. I also have another cow that has hard lumps in her udder. F. N. E.
Clayton, Wash.

Give your first cow 10 grains of potassium iodide on her feed or in a drench once daily for some time. Treat your second cow by giving her a pound and a half of epsom salts in a quart of water. Paint the udder where the lumps are, after each milking, with an application composed of soap liniment, six ounces, and tincture of iodine, two ounces.

Give Dry Feed.—We have a fine milch cow that has had four calves and always has milk fever when fresh. She will be fresh again in March, is now giving four gallons of milk per day and probably will not go entirely dry. We are feeding twice daily a gallon of dairy feed and alfalfa hay. Could she be fed to prevent the trouble mentioned? J. P. W.
Willapa, Wash.

You should dry this cow up immediately. She should have from four to six weeks' rest. Take away the dairy feed and give her dry hay, not too much of it. After she is dried up you can begin feeding her more liberally until within 10 days of her freshening, at which time put her on the poorest hay you have. When you have her on this very dry feed, without roots or anything to aid her digestion, give her a cupful of epsom salts in a quart of water daily to prevent digestive troubles. As soon as she calves you can begin to feed her bran mash and hay gradually until after three or four days you can again have her on regular feed. This method often prevents milk fever.

Need Exercise.—We have a pig that is in fine condition, eats well, but after eating seems to cough and wheeze. We just bought two little pigs and they seem to have the same cough, only they cough more or less all the time. They have a good, warm place to sleep and get warm feed. I also have a cow that will freshen soon. Along toward the last of her milking period she had garget. If she has it again what treatment should I give? J. V. C.
Okanogan, Wash.

You do not mention whether or not the pigs have opportunity for exercise. I would judge from your letter that they do not. You will find that if you can give them exercise the wheezing will probably disappear. You might lessen a little of the feed and give them more exercise. If the cow gets garget again, wash the udder with hot water in which salt has been dissolved, a handful to a pail of water. Dry carefully and milk often. Cut down on her feed so as to lessen the milk supply for two or three days. When she gets better increase the feed.

Lumps in Udder.—I have a cow that will freshen soon and she has two lumps in her bag about the size of a hen's egg.
Tenino, Wash. A. S. D.

Paint it with tincture of iodine after the night milking.

Sure Rupture Comfort

Brooks' Appliance, the modern scientific invention, the wonderful new discovery that relieves rupture, will be sent on trial. No obnoxious springs or pads.

Brooks' Rupture Appliance

Has automatic Air Cushions. Binds and draws the broken parts together as you would a broken limb. No salves. No lies. Durable, cheap. Sent on trial to prove it. Protected by U. S. patents. Catalog and measure blanks mailed free. Send name and address today.

New Lamp Burns 94% Air

Beats Electric or Gas

A new oil lamp that gives an amazingly brilliant, soft, white light, even better than gas or electricity, has been tested by the U. S. government and 35 leading universities and found to be superior to 10 ordinary oil lamps. It burns without odor, smoke or noise—no pumping up, is simple, clean, safe. Burns 94% air and 6% common kerosene (coal oil).

The inventor, W. W. Johnson, 31 N. Fifth St., Portland, Ore., is offering to send a lamp on 10 days' FREE trial, or even to give one FREE to the first user in each locality who will help him introduce it. Write him today for full particulars. Also ask him to explain how you can get the agency and without experience or money make $250 or $500 per month.—Adv.

$ ONLY 2 DOWN A Year to Pay

More than 175,000 New Butterfly Cream Separators are now in use

Ten of His Neighbors Have Bought the New Butterfly

We can recommend the Butterfly in every way, and I can recall the names of ten who have bought since I have this one. About a month ago I had your catalog sent to two other parties, and they both have ordered. Yours truly,
BERT I. VICKERY, Minooka, Ill.

ALBAUGH-DOVER CO.,
2183 Marshall Blvd., Chicago, Ill.

Gentlemen:—Without obligation on my part, please mail me your FREE Catalog Folder and full particulars regarding your special easy payment offer on the New Butterfly Cream Separator.

I keep.....cows

Name.....

P.O.....

State.....R. F. D.....

Think of it! You can now get any size of the New Butterfly Cream Separator you need direct from our factory for only $2 down and on a plan whereby it will earn its own cost and more **before you pay.** You won't feel the cost at all. Our low prices will surprise you. For example:

$44 buys the No. 2½ Junior, a light running, easy cleaning, close skimming, durable, guaranteed separator. Skims 120 quarts per hour. You pay only $2 down and balance on easy terms of **Only $3.50 a month;** no interest to pay. No extras. Prices we quote include everything. We also make 4 larger sizes of the

New Butterfly

up to our big 600 lb. capacity machine shown here—all sold at similar low prices—on our liberal terms of only $2 down and more than a year to pay. Every machine guaranteed a lifetime against defects in materials and workmanship.

30 Days' Trial

You can have 30 days' trial on your own farm and see for yourself how easily one of these splendid machines will earn its own cost and more before you pay. Try it alongside of any separator you wish. Keep it if pleased. If not you can return it at our expense and we will refund your $2 deposit and pay freight charges both ways.

Catalog Folder FREE

Why not get one of these big labor-saving, money-making machines while you have the opportunity to do so on this liberal self-earning plan? Let us send you our big, new, illustrated catalog folder showing all the machines we make and quoting lowest factory prices and easy payment terms. We will also mail you a book of letters from owners telling how the New Butterfly is helping them make as high as $100 a year extra profit from their cows. Sending coupon does not obligate you in any way. Write today.

Gets ALL The CREAM

Made $61.39 More from Same Cows
"We made $78.61 worth of butter before we had the machine and in the same length of time we made with the Butterfly Separator $140 worth of butter from same number of cows."
THOS. S. KERMOSKY,
Point Aux Pins, Mich.

EASY TO TURN

Twelve-Year-Old Child Runs It
"We would not do without our Butterfly Separator or exchange it for all the machines we have seen. Our little girl, 12 years old, runs it like a clock!"
MRS. P. E. RUDE,
Ashland, Wis.

EASY TO CLEAN

Simplest, Easiest to Clean
"My son took a course in agriculture at Cape Girardeau and he worked with a dozen or more makes of separators, and he said this was the most simple and easiest cleaned machine of any of them."
J. B. FINLEY, Oran, Mo.

POULTRY

Why the Slump in Egg Prices?

The news letter of the Washington state department of agriculture recently contained the following suggestions as to the causes of the recent slump in egg prices:

The commencement of the year found a rapid and extraordinary decline in the price of eggs. Indeed, in the eastern markets the price dropped to what would be considered a low price during the spring, when the bulk of the eggs produced in the country are rushed to market. In New York the price of select Pacific coast white eggs was cut squarely in two within the space of a couple of weeks.

The explanation of the decline is not any falling off in consumption. On the direct contrary, New York reports that during December the amount of eggs which reached that market was 45 per cent greater than during the same month of last year. Yet, they were all consumed and the amount of eggs in cold storage declined 7 per cent during the month. The fact seems to be that the heavy increase in the amount of eggs on the market broke the price and the lowered price stimulated consumption. So far as cold storage eggs were concerned, it is probable that the owners of those eggs, when they saw the price fresh eggs breaking at this time of the year to 42 cents, became panicky and decided to get their eggs out before the price sagged further.

The explanation of overproduction at this season of the year, at that, seems fairly plausible. Almost all specialists in egg production have been breeding for winter layers, because in winter the price of eggs is uniformly the highest or has been so in the past. It will be remembered by those who follow market conditions closely that for a time in the fall of last year practically the only eggs on the Seattle market were pullet eggs. The spring hatch of pullets were coming into laying and they have been laying all through the winter, with the consistency of fowls line bred for big egg production. There is a chance that the commercial egg producers have rather overdone this business of winter egg production and among them are making the winter instead of the spring and early summer the season of the greatest egg production in this country.

Chickens and Orchard

J. H. McCoy of Kirkland is getting a small home orchard planted to Montmorencey sour cherries. Gooseberries and currants have been planted in the rows of trees and for the first few years small garden crops will be planted between. A small flock of hens were secured last summer and Mr. McCoy plans to weed out all but the Barred Rocks.

"I am going to put in some kale and rape for the birds to work on this summer," said Mr. McCoy. "I will fence in the orchard and let them run at all times. They are a benefit to an orchard, since they will eat many insects and put much fertilizer on the soil.

"I expect to keep rather busy with the place, even though it is only a little over an acre in size. I am a carpenter and spend most of my time working, but there will be odd times when I will be improving the home and orchard."

GREASES BALD-HEADED HENS.

To the editor of The Washington Farmer: My attention has been drawn by an article or two in your very valuable paper lately on "Bald-Headed Chickens." More than likely it is caused by tiny parasites that infest poultry and eat the feathers. They attack different parts of the fowl and are so very small that they can not be detected with the naked eye and will cause spots to become completely bare. Simply grease the spot and a little around the spot with any kind of grease, lard, fryings or vaseline.

I have seen several dozen chickens become infested by putting a strange fowl in among them that has a bare spot and have remedied the trouble by greasing them.

After my first experience along this line I always kept my "new cockerels" in quarantine for two weeks before putting them with the flock, giving them thorough treatments for lice or mites or scaly legs, colds, etc. Prevention is better than a cure. MRS. W. H. YEO.

Spokane, Wash.

CAPONS NEED COLDER CLIMATE.

Mrs. Peter Tait of Kirkland inquires if it would be practical to caponize young White Leghorn cockerels in order to increase their size and have them ready for an early fall market.

George Shoup, poultryman of the Western Washington experiment station, replies that caponizing is very seldom profitable for Pacific coast districts. A capon will not produce rapid growth in moderate weather, but in other parts of the United States where it gets cold the practice is more profitable, since the birds have better appetite and eat more feed.

SHOULD BE WATCHFUL.

The good poultryman keeps a close watch of his flock to guard against the entrance of disease. It is a good idea to go out to the roosting house at night and listen to the flock as they breathe. Coughing, sneezing and gurgling in the throat are pretty good evidences of colds that should be given immediate attention. Hens that have colds should be separated from the others at once in order to prevent the spread of the trouble. Roup, one of the most troublesome poultry ailments, results from neglected colds.

ANOTHER THREE-YOLK EGG.

To the Editor of The Washington Farmer: I read in your paper of E. W. Corner of Spokane getting an egg with three yolks. We also gone with three yolks from a Rhode Island Red hen. Two were extra large and the third one about half as large. The egg measured 8 1-2 inches the long way and 6 1-2 inches around. There seemed to be plenty white for the yolks. J. P. RICHARDS.

Hamilton, Wash.

DANGERS FROM VIBRATION.

When incubators are set near a railroad track there is some danger of damage to the eggs from excessive vibration. The same is true of heavy blasts of powder and it is a good plan to avoid turning the eggs when a blast is about to occur.

Injury is caused by the air vibrations and if the incubators are kept closed there is less danger. After the eggs have been set a few days they are practically out of danger.

KALE IN BROODER YARDS.

When using the sectional brooder yards plant the rows of kale lengthwise to the units. It will be easier to cultivate and the chicks will follow the rows readily.

Save Money
By Purchasing Your
Incubator
During February

RELIABLE
Standard
BLUE FLAME
Wickless
Oil Heated Colony Hover *J. W. Myers, Pres.*

AN INVENTION of our President, thoroughly covered by letters patent. The most practical heating and brooding device known to the poultry fraternity. Our 1922 model **Wickless and Valveless Oil Heated Colony Hover** embraces all the latest and best known improvements in hover construction. From the very beginning it has been the best. It is still far ahead in the front rank. We make sure that every one is right before they leave the factory. Every burner is tested and adjusted to the maximum flame. It will not overflow. It is impossible to clog and slow down the oil flow—it burns until you turn it out.

It Is Dependable—"Reliable Because Right"

Burns ordinary kerosene or coal oil with a clear, blue flame; absolutely no fumes; no soot; no odor; no wicks to trim; no smoke. It gives a pure, clean heat necessary for the comfort and health of chicks beneath the canopy, regardless of outside weather conditions. It is easily regulated. Automatically controlled. Insures the raising of chicks with least work and care at the lowest cost.

Hovers are built of galvanized steel. Shipped completely assembled, ready to bolt the legs to the canopy. Place the heater where wanted, fill with oil, adjust burner to the heat required, and it is ready to start and will continue to go, with little cost, in fact, a great saving in fuel, as long as you want it.

Our money-back guarantee completely covers your purchase, either through our dealers, or direct from us.

Write for literature, poultry guide and sales book, thoroughly descriptive of our Reliable Line.

All Reliable Incubators, Brooders, Hovers, Poultry Appliances and Equipment
made at our factory are guaranteed to give absolute satisfaction. We are prize winners throughout the world.

ORCHARD

GRANVILLE LOWTHER
EDITORIAL CONTRIBUTOR

Building Berry Farm

"It takes a lot of money to build up a berry farm, especially when you are trying to build it up within two or three years' time," is the opinion of J. H. Clark of Bellevue, who has a 15-acre farm and is getting it planted to small fruits. "I am setting out several different kinds of fruits in order to have a longer season for harvesting. I don't care about making a specialty of any fruit until I get better acquainted with the soil and climatic conditions.

"I set out an acre and a quarter of raspberries, most of which are Cuthberts, but I wanted to try out the Marlborough and the Antwerp. The plants are getting a fine start and there are an abundance of new shoots. I did have some blackcaps, but they didn't get a very good start and I was afraid the climate was not right for them and I dug them out."

When setting out the two acres of loganberries Mr. Clark tried both transplants and sets, planting them in alternate rows in order to find out which would first produce bearing vines. The growth of the transplants during the summer was much greater than the sets and the vines are now of sufficient size to produce a crop of berries next season. Both kinds of plants had similar treatment during the summer. From this trial he is convinced that sets are not as vigorous as are the plants that have been transplanted before setting.

In another field are some everbearing blackberries. The patch, which is only an acre and a quarter in size, is on bottom soil, but has been well drained by a system of ditches and a furrow between each two rows of vines. Mr. Clark has used a unique method of trellising, since there are no staples or nails used to support the wires. Notches were cut in cross pieces on the posts with a saw and the wires inserted. For the spreaders between the posts, notches are cut at both ends just large enough to admit the wire. This process not only saves the cost of staples, but allows for the removal of the wires when cutting out the old canes.

"I am also putting out two acres of grapes," said Mr. Clark," and I am getting the Island Belle. I am trying out a plan of fertilization of the soil while the grapes are getting their growth. I have been told that grapes should never be planted on soil unless it is fertile, but this piece of land is high and was cropped to strawberries before I bought it. I am building it up while the plants are getting established. Late this fall I scattered barnyard and hen manure around the plants and will turn it under with the spring cultivation.

"It is my purpose to establish a small fruit farm which will require a minimum of spraying. I am not setting out any trees for that reason. What few trees I have will be cherries and perhaps an occasional apple for the home orchard. The berries will not need much attention, with the possible exception of the blackberries, and I figure it will eliminate much labor in the busy season."

Mr. Clark then told of a cover crop experiment which he carried on last summer in the young cherry orchard. Vetch, wheat and oats were seeded together in the fall of 1920 and allowed to grow the following spring. The growth was very heavy and it turned under in fine shape. I made one mistake by leaving it too long before plowing and it took some of the moisture from the trees.

A field of buckwheat was tried out as a cheap crop to turn under, but it is not considered as good as vetch or clover because of its lack of nitrogen. It does, however, put the soil in a good physical condition and is an easy crop to grow in this section, according to Mr. Clark.

Humus in Orchard Soils

Much is being said about the value of humus in orchard soils, especially after a series of years in clean cultivation. It now appears that there may be too much of a good thing even with regard to humus. According to Professor O. M. Morris of the state college, a slight excess of humus will tend to throw the trees into a heavy foliage and big growth, resulting in large sized, yet poorly colored fruit.

The fact yet remains that the soils of the Inland Empire when first brought under cultivation contained a relatively small quantity of humus and relatively large quantity of plant food material. This fertility has been preserved in the soil for ages, as it has never been washed away by rain. For the first few years of cultivation it is very productive, especially in tree growth. Then came the era of clean tillage. High temperature and control of water exhaust the humus supply rapidly with the result that in a relatively short time the production of the soil is dropping from the original indications.

Professor Morris goes on to point out that normally all these irrigated soils show quick and good response in plant growth to the application of nitrogen having fertilizers. This fact is the explanation largely why the legumes, such as alfalfa, have given splendid results in soil improvement.

But it is to be remembered that the growing of alfalfa upon this soil and using the entire products of the plant for hay is exhaustive to the soil. Often the crop is shipptd out of the country entirely to the stock and the dairy farms of western Washington instead of being fed to stock at home, where the manure can be put on the ground, and thus at least a part of the soil building material is returned.

The big problem seems to be how much humus to introduce into the soil by plowing under legumes and when to stop. In Professor Morris' own words: "We have found that there is a sort of knife-edge in this matter and too much one way or the other will affect the quality and quantity of the fruit."

Worms in Potatoes

When I harvested my potato crop I found quite a few were wormy. One-half of them were dipped in mercury solution and the other half were not, and they are all the same. Can you tell me the cause and remedy for this? T. M. R.
Plum, Wash.

It will be necessary to send some specimens of the affected tubers in order that we may find out which worms these are in yours, as there are several types of worms that infest potatoes.

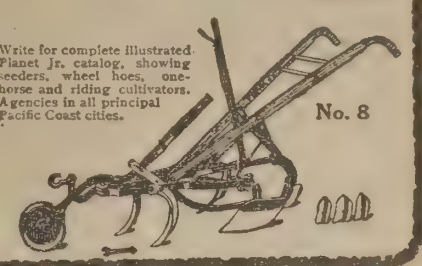
Treatment of seed in the spring before planting with mercuric chloride would not have any effect in preventing worms on the tubers formed. That treatment is aimed at the control of scab and also rhizoctonia, both fungous diseases.

We have in this region the wireworm, which enters tubers and causes trouble. Often the larvae of the flea beetles attack the tubers. When tubers rot from any cause many small maggots are formed in them, the larvae of small flies.

ARTHUR FRANK, Plant Pathologist.

OFFERS DUROCS AND HOLSTEINS.

S. L. Banks of Tekoa has announced February 28 as the date of his sale at which he will dispose of about 40 head of Duroc Jersey swine and Holstein cattle. The sale will be cried by Colonel Harry C Cranke of Moscow, Idaho.



The farmer's best friends — Planet Jr.

When there's wheat to be harvested, when there's hay to cut, when oats are ripe, and corn and potatoes must be cultivated, Planet Jr. cultivators are the farmer's best friends. Planet Jr. cultivators are scientifically designed to work fast and clean with minimum effort. Time saved cultivating is labor and money saved. Planet Jr. saves them all.

No. 8 Planet Jr. Horse Hoe and Cultivator is one of the most useful, popular horse hoes we make. Its extra length and stiff construction give it steadiness. Works quick and close, saving hand work. Adjustable to all widths. Hills or throws from the row. Has solid, non-clogging depth wheel with lever.

$950 PER ACRE

Sonderegger's Prizetaker Onion We find this to be the largest and handsomest Yellow Globe Onion for home or market. It grows to an immense size, but is fine-grained, mild and of delicate flavor. Fine for fall and winter use. Frank Woodfill, a Nebraska farmer, wrote: "Six Sonderegger Prizetaker Onions, set side by side, measured 22 inches. I used 100 lbs. of nitrate of soda and grew 400 bushels of Prizetaker Onions on less than one acre. They were the finest onions I ever grew."

Campbell's Early Grape — A new variety, vigorous growth, very hardy, very early and an abundant bearer. Good shipper; keeps for weeks after ripening.

Perfection Currant — In our entire experience this is the best bearer, the largest, sweetest and easiest to pick. Rich, mild flavor, less acid and few seeds.

Everbearing Raspberry — The wonderful new St. Regis. First to bear and continues till late October. Very hardy. Yields first season.

Low Prices on all kinds of Fruit Trees and Plants, Vegetables, Flower and Field Seeds; Shrubs, etc. Get our big Illustrated Catalog, sent free. (33)

Asparagus and Rhubarb roots, annual and perennial flowering plants. Seed potatoes. Our handsome FREE catalogue describes fully how to produce sure crops of tomatoes, peppers, cabbage and other vegetables and flowers.
KELLY GARDENS, Spokane, Washington

The Diener Tomato

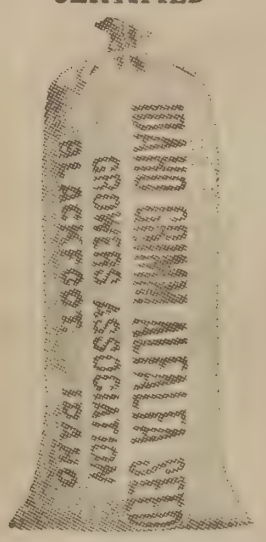
Increase your tomato yield one hundred per cent by raising the new DIENER TOMATO. 30-40 tons of ripe fruit to the acre.

This tomato was raised last year all over the United States and Canada with the greatest satisfaction.

As smooth as an apple and of a magnificent dark red color. Single tomatoes weigh up to 3 lbs. each. The flesh is more solid than that of any other tomato. The fruit contains very little seed and is solidly filled out. This tomato is free of the acid taste, and for dehydrating, catsup and canning it is the best tomato in existence today.

The DIENER TOMATO is blight-resisting as well as drought-resisting. It will not crack from the rain and will not rot while lying on the ground in wet weather. This tomato will grow in almost any kind of soil and it commences to ripen the first part of August.

It is the greatest novelty in the tomato line, and it will soon crowd out the present varieties from the market by its far superior quantities.



Price of the DIENER TOMATO SEED: Sample pgk., 25c; one-quarter of an acre pkg., 50c; one acre pkg., $1.50.

Our 1922 catalogue will be sent upon receipt of 25c in stamps, which amount may be deducted when sending in first order.

POULTRY (Baby Chicks) 174

"WHAT THEY SAY."—"YESTERLAID EGG Ranch, Kent, Wash. Dear Sir:—Is there any chance for 1200 chicks the 1st of April? Well pleased with your pullets last year. They laid between 50 per cent and 60 per cent since last October." Jack Sheridan, Greenacres, Wash. "Dear Sir: I bought 400 chicks of you last spring and will say they were the best layers I have. I would like to buy between 400 and 500 more next month. What time in February could I get them?" Mrs. Leonard Fossett, Dungeness, Wash. "Jan. 6th, 1922. Dear Sir: Enclosed find $7.50 as 15 per cent payment on 250 chicks. Our neighbor, Mr. Wood, got some from you last year and they certainly are good layers." William Stark, Coeur d'Alene, Idaho. We hatch 12,000 chicks every 5 days from our own wonderful trap nested White Leghorns. All of our 8000 laying hens are trap nested and bred to lay. We have 40 acres devoted exclusively to White Leghorns, all with wonderful egg records. More than 50,000 chicks already sold, but we still have good dates left if you book your orders at once. Send for price list and dates you would like chicks shipped. Yesterlaid Egg Ranch, Kent, Wash.

WHITE LEGHORN AND ILL-A-HEE BARRED Rock chicks—Buy chicks this year that live and grow and are bred to lay. Butler White Leghorns and Ill-a-hee Barred Rocks are known for high average flock production. Before ordering elsewhere, write for circular telling how our breeding methods produce 200 flocks for our customers. All stock trap nested and pedigreed. Also get our prices on breeding cockerels and hatching eggs for each breed. Address Butler Poultry Farms, or Ill-a-hee Poultry Farm, Jennings Lodge, Ore.

"FRESHLAID" WHITE LEGHORN CHICKS have the qualities you want; vigor and scientific breeding for the heaviest egg production; every "Freshlaid" male is from a high record hen. Freshlaid Farm is one of the largest and oldest chick plants in the Inland Empire. There is a real demand for "Freshlaid" chicks, especially from our old customers. We are sold out until May 1. Write at once if you wish May chicks. May chicks make ideal winter layers. Catalog. Freshlaid Farm, Colfax, Wash.

THE PROGRESSIVE HATCHERY — BABY chicks from vigorous range bred stock; trapnested S. C. White Leghorns, $20 per 100; selected S. C. White Leghorns, $18 per 100; S. C. R. I. Reds and Barred Rocks, $25 per 100; safe delivery of live, vigorous chicks, full number ordered; absolutely guaranteed. Send for circular of special matings and hatching eggs. 1534 East 12th North, Portland, Ore.

BABY CHICKS FROM PETALUMA ELECtric incubator have "pep" that surprises customers. Electricity is life. Modern poultrymen are rapidly adopting our system with splendid results. Safe, efficient, economically better chicks. Hatch for yourself or get chicks from hatcheries using Petaluma incubators. Write for our free catalog. Petaluma Electric Incubator Co., Petaluma, Cal.

TRACK'S END

By HAYDEN CARRUTH

A Stirring Story of Adventure

(Copyright by Harper & Bros.)

CHAPTER XVI.

Telling of how Pike and his Gang come and of what Kaiser and I do to get ready for them; together with the way we meet them.

Here, now, I must tell of how the outlaws came to Track's End, and of the fight we, that is to say, Pike and his gang on the one side and I, Judson Pitcher, on the other side, had that day.

I may speak in prejudice, though I mean to be fair, when I say that I believe them to have been as bad a gang of cutthroats as you could well scare up. Though I fought them all as best I could I make no bones of saying that I should 10,000 times rather have been at home blowing the bellows, or doing anything else.

I was very lucky with these villains and was not caught away from home flat on my back, as I had been by those other scoundrels, the Indians; if I had not been lucky I should not now be here to tell the tale. Those fellows meant no good to me nor to anybody else. It would have been no bad thing if they could all have been hanged by the neck.

They came, then, to Track's End to rob, and to murder if needs be, on Saturday, February 5th. My good luck consisted in this: The evening before, just as the sun was about to go down, I saw them at Mountain's from the windmill tower with Tom Carr's field glass. I had gone up on purpose to have a look about, as I did two or three times every day when the weather was so I could see. For three days the weather had been much better than at any time before, and it had even thawed a little; so I was not much surprised when I saw horses coming up to the shack from the west. I made out seven men, all told, and some extra led horses. I could see that the men went into the shack and that many of the horses lay down. By this I knew they were tired, and guessed that the gang would probably stay there that night and rest. I was surprised that they had got through on horses at all. I stayed on the tower till itwa s so dark that I could not see any more. The longer I stayed the louder my heart thumped.

I knew they might, after all, come that night, either with the horses or on snowshoes, so I did what I could to get ready for them. The fires were all going well, and I lit several lamps about town. I wished a thousand times for the population I was pretending I had. I thought if I could have even one friend just to talk to perhaps my heart wouldn't act quite so unreasonably. But after a while it tired out and quieted down. My knees got stronger and more like good, sensible knees that you don't have to be ashamed of. I took a look at all the guns and wiped them up. I locked and bolted every thing except the doors or windows which led into the tunnels. There wasn't anything more I could do except wait and try to keep that crazy heart of mine a little quiet.

I knew that whenever or however they came they would be most likely to come in on the grade, so I thought the best place to wait was in Townsend's store, as they would have to come up facing the back of it. The windows were planked up; but I knew that there were no windows in town, or even sides of houses, either, which would stop a bullet from a good rifle. I calculated if they came in the night it would probably be about 1 or 2 o'clock, and if they waited till morning I could look for them when it began to get light.

I went over to Townsend's early in the evening and sat down close to a back window in the second story. I had Kaiser with me. I think he was gradually getting the thing through his head, because he had stopped wagging his tail and begun to growl once in a while. I thought I could trust him to hear any sound for three or four hours, and I tried to sleep, but I couldn't. Every few minutes I went up a short ladder and put my head out the scuttle in the roof to look and listen. I heard a good deal, but except for the wolves away off it was all in my ears. About midnight by the stars I went to sleep in my chair before I knew it.

When I woke up I gave a great jump. It seemed as if I had been asleep a week; and it certainly had been several hours. Kaiser was siting on the floor beside my chair. I knelt down and threw my arms around his neck and gave him such a prodigious hug that it must have hurt him. "We will do the best we can!" I said to him.

From the roof I could see a faint light in the east. The wind was fresher from the northwest and it was drifting a little; this was good. I scolded myself for having slept so long. I knew if they had come that I should not have been ready for them.

I hurried around and fixed the fires. I drank a cup of coffee at the hotel, but couldn't eat anything. I think if I had had outlaws every day that my keep wouldn't have cost Sours very much. I was back at Townsend's in a jiffy. It was getting red in the east now, and the moon, which had shone all night, was about down. It was light enough so I could see pretty well by this time; but I heard the crunching of the crust by the horses' feet before I could see them at all. Then I saw the whole gang coming on a dog-trot along the grade, two abreast, with one ahead, seven pleasant neighbors coming to call on me at Track's End. I let them come as near as they deserved to come to any honest town and then fired a shot in front of them. I tried to see if the bullet skipped on the snow, but the smoke got in my eyes.

Anyhow, they stopped pretty quick, and stood all in a bunch, talking. "Maybe you don't like to be shot at," I said out loud. I don't know how it was, but my heart was doing better. I thought I would wait and see before I did any more shooting.

They talked a few minutes; then one of them got off his horse, handed his gun and belt to one of the others, took off his big fur coat, pulled out a white cloth and waved it and came walking very slowly toward the town. This seemed fair enough; I had heard my Uncle Ben tell about flags of truce in the war. I waved my handkerchief out of the porthole and then waited three or four minutes as if we in the houses were talking it over; then I walked boldly out the back door. Kaiser wanted to go along, so I let him.

The man walked very slowly, and I did the same, but we came up within a few steps of each other at last. This was out not very far from the water tank. I had expected it was Pike himself, and, sure enough, it was, wearing a leather jacket with the collar turned up.

"It's you, is it, Jud?" said he in a kind of sneering tone. (It seemed strange to me to hear a man's voice, I had been so long alone.)

"Yes, it's me," I answered. "What do you want?"

"I sort of thought these here Track's Enders might send out a full grown man to talk to me about such an important matter," he went on.

"I was man enough to catch you a couple of times and it was only your good luck that you weren't hung up here in Track's End by the neck," I said, a little put out by the way he spoke, because I was almost as big as he was.

"Oh, well, no matter. Now you——"

"I'll tell you the reason I was sent out," I broke in, just thinking of something.

"What is it?"

"I can say all there is to say as well as anybody, but I'm a poor shot, so it was decided that if I didn't get back it wouldn't make much difference in the matter of shooting you fellows down if you come any nearer."

He pulled his collar down and looked at me over his crooked nose. Kaiser began to growl, but I poked him in the ribs with my foot to let him understand that there was a flag of truce on and he must behave himself. I guess Pike didn't like it, because this sounded as if we couldn't trust him, but he didn't say anything.

"Well," he broke out, "there's no use of us standing here and talking. We've come after that $5000, and you fellers know it."

"We told you all we had to say about that in the letter."

"Then we'll bust that safe and burn your town," he said, like a savage.

"Go ahead, and try it," I answered. "We're ready for you."

His face, which had looked black as night all the while, now turned white with rage.

"We'll try it fast enough and we'll do it fast enough, too," he cried, with some prodigious oaths, bad enough for any pirate. "Look here; I ain't got any gun with me, and I s'pose you ain't, if you're any man at all. But you're as near your gun as I am mine, hey?"

"Yes," I said.

"Then this here flag of truce is ended right now. When I get hold of my gun I shoot, and you're welcome to do the same!"

He turned and started back on the run. So there was nothing for me but to face about and do the same.

CHAPTER XVII.

The fight, and not much alse; except a little happening at the end which startles me greatly.

It seems a good deal to believe, but I actually half think that Kaiser had begun to get hold of the fine points of a flag of truce, and that he understood it was ended. What makes me have this idea is that I think he must have taken after Pike at first, though I wasn't doing much looking back just then, being busy at something more important; but anyhow he

"Yes, it's me," I answered.

wasn't with me till I was halfway to the store, when he passed me with a great bark and went on tearing up the snow a few steps ahead. I wish he had got ahead sooner, as I think I ran faster trying to keep up with him; but as it was I don't know but he saved my life.

Either Pike got back before I did, or one of his cutthroats fired for him; I know not, probably the latter, but the shot was for me and well aimed, so well that I guess the bullet went where I was when it started. Thus it was: Kaiser was ahead, and reared up and threw himself at the store door, which, being unlatched, flew open; it stopped him a little, and I, being close behind, went down over him and into the store head first, as if I had been fired out of a cannon; and at that istant the bullet I spoke of struck the open door half way up. I slammed the door shut, grabbed my rifle, stuck the muzzle through the porthole, and pumped three shots out of it without once trying to aim.

Then, without taking breath, I ran out the front by way of the tunnel to the bank, and so upstairs, where with another rifle I pumped out two more shots, and then looked. The men had left the grade, and were coming full tilt out around the water tank and grader's carts, their horses rearing and floundering through the drifts. I fired twice, aiming carefully each time, but I don't think I hit. I saw they would soon be out of range. Again I dropped my gun, ran downstairs and through tunnel No. 1 to the hotel and upstairs to a corner window, doubleplanked up, and giving me the range on the square and the foot of the street. I was there first, with the hammer of my winchester back, and with Kaiser behind me, wishing, I know, that dogs could shoot.

The next second they came in sight and charged for the street. I aimed and fired; I hit this time; one of the horses went down and the man over his head. The other six came straight for the end of the street. I fired again, but saw no results. I counted on the drift stopping them. It did so less than I expected. Two went down in the snow; four came on. I fired and one man dropped off his horse. The hard crust was holding the other three. I fired again, but it did no good. Then the head one, on a pinto pony, went down like a flash out of sight, horse and man. He had gone into tunnel No. 3, leading toTownsend's store.

I fired three shots as fast as I could work the lever, without stopping to aim. Then I looked out. The other two riders had turned tail. The horse of one had gone down in the snow and he was running away on foot; the other had got off the drifts without going down. I thought it was Pike. It seemed a good time to shoot at him, and I did so, but without so much as touching him, as I think. The man in the tunnel got out and dodged around the corner of Townsend's store before I could do my duty by him. They were all the next minute at the depot, either in it or behind it.

This thing of their taking the depot was something which I had not thought of. They were now as well covered and protected as I; and it was still seven against one, because the man that I shot off of his horse got over with the other by the help of one whose horse went down in the drift. But their building was more exposed than mine, and they could do nothing about their robbery so long as they stayed there.

They now began to fire their first shots since the one which followed me into Townsend's store. They were well-aimed shots, too, and the bullets came through my window as if the planks were gingerbread. A splinter of wood struck my left eye and closed it up; but I had it shut most of the time anyhow, aiming with the other, so it didn't matter. However, I didn't like the place and went back into the room in the northwest corner and got a range on them from one of the front windows. I thought their bullets would glance off the planks here, and they did; however, the ones which struck the side came right on through, lath partitions and all; but I kept close to the floor. All the time Kaiser stayed close behind me, barking so that I thought he would tear himself to pieces, and with the hair on his back standing straight up.

I had two rifles and a hundred or more cartridges, and I began to give the depot a pretty stiff bombarding. I don't think I missed the building once, and I knew every ball went through the side; but what they did after that I couldn't tell. There were three windows in the depot on the side toward me, all close together near the east end, but none at all to the right of them. None of them were boarded up and the robbers were pretty careful about showing themselves much at them. They gradually dropped off the platform on the other side and crawled under to the front from where I had watched the Indians that day. They were well protected here, but the wind swept across the west end of the square and blew such a spray of snow in their faces that they could not see to aim well. On the other hand the sun had now got up and the reflection came in my eyes and hurt my shooting. I wished that the horse was out of the way so I could get through tunnel No. 3 into Townsend's, where a side window, well planked, looked right down on the depot; but it was just as well that I couldn't, as I found out afterward.

They were still thinking that there was a large population in Track's End, and I could see splinters flying all over town where they were plugging away at windows and doors.

I soon noticed that they were not shooting quite so much, and thought some of them might be sneaking around and thinking of coming up from the west, so I went through to the bank once in a while, firing a few shots from its front window at the depot so as to keep up their large-population idea. At the third visit I looked out back and saw a man run from the coal-shed to behind the water-tank. I got ready and waited. Another ran across. I gave him a shot which made him jump. Then I fired half a dozen shots through the inclosed part below the tank, and if any of the balls missed the big timbers they must have gone through. I thought those fellows would keep awhile and ran back to the hotel and began to pepper

Bits of Fun for Everyone

Color No Obstacle.

"I want a loaf of bread," said the small boy.

"Would you like white or graham?" from the clerk.

"It doesn't make any difference. This is for a blind woman."

Skin Probably.

Teacher—So you don't know which letter comes next to H?"

Willie—No'm.

Teacher—What have I on each side of my nose?

Willie—Looks like powder, ma'am, from here.

Silence?

The reading lesson had begun, and it was Tommy's turn to read aloud. He came to the sentence, "Silence reigned in the house."

"Now," said the teacher, "can you tell me what silence is?"

Tommy thought for a minute, then said eagerly: "Yes, teacher, I know; it's what you don't hear when you listen."

Such a Good Baby.

One hot afternoon a young man in shirt sleeves was wheeling a baby carriage back and forth before a small house in Washington. He looked hot, but contented.

"My dear!" came a voice from an upper window of the house.

"Now let me alone!" he called back. "We're all right."

An hour later the same voice, again, in earnest, pleading tones:

"Arthur dear!"

"Well, what do you want?" he responded. "Anything wrong in the house?"

"No, Arthur dear, but you have been wheeling Clara's doll all the afternoon. Isn't it time for the baby to have a turn?"—Harper's Magazine.

Naming the Baby.

"I've decided on a name for baby," said the young mother. "I shall call her Euphrosyne."

Her husband did not care for the suggestion; but being a tactful fellow he was far too wise to say so.

"Splendid," he said cheerfully. "The first girl I ever loved was called Euphrosyne, and the name has very pleasant memories for me."

There was a brief silence. Then: "We will call her Elizabeth, after my mother," said the young wife, firmly.—Watchman and Examiner.

away at the depot again. This I kept up for an hour, I think, when I caught a glimpse of one of the men from the tank going back and thought likely they had both gone.

The outlaws made just one more rally, and it was very well planned, and if I had not been expecting it it might, after all, have gone hard with the town of Track's End. All at once they began an uncommonly lively firing from under the depot platform. I thought this might mean a charge from the other side, so I started to see. Joyce's store ran back farther than any of the others on that side of the street and had a side window near the corner; so I went there instead of to the bank.

It was slow work crawling under the sidewalk and getting up through the trap-door, but I made it at last and ran to the window. Two of the men were charging straight across the square for the rear of Townsend's, carrying a big torch of sticks and twisted hay. The window was not boarded up, but I stuck my rifle barrel through the glass and fired at them. The bullet, I think, struck the torch, because I saw the fire fly in all directions. They dropped it and retreated in a great panic, while I shot again.

I ran back to the hotel and began shooting once more at the depot. They never fired another shot. I went over to the bank and from the back window I could see them going away to the southwest, keeping under cover of the tank and coal-shed. They came around up on to the grade a half-mile to the west. I had a look at them through the glass. Some were walking and some riding. There seemed to be two men on one horse. I think that more than one of them was wounded, but the drifting snow now made it hard to see. I went back through the hotel and down the street to watch them from the tower above the snow. The pony which had fallen into the tunnel was still there. I noticed it wore an expensive Mexican saddle, all heavy embossed leather, with a high cantle, silver ornaments, big tapaderos on the stirrups, and a horsehair bridle with silver bit. There was a red blanket rolled up and tied on behind the saddle.

As I went by Townsend's I saw that the window I wanted to get to was as full of holes as a skimmer, and I was glad the horse had blocked up my way. I noticed that the depot wasn't much better off, however, for holes. I went up the tower and watched the outlaws for half an hour. They stopped a few minutes at Mountain's to get their extra horses and then went on.

The wind was coming fresher all the time and I was pretty well chilled when I got down. I was hurrying along across the drifts to the hotel when I noticed the horse in the tunnel again. But his fine saddle and bridle were gone. I knew instantly that it must be the work of my unknown night visitor, who had not stolen anything for some time. This was the first thing that had been disturbed by daylight; it was growing bolder. My heart had behaved itself so well during the fight that I had forgotten that I had such a thing; now it started to thumping so hard that I thought it was all there was to me.

(To be continued.)

Women in the Grange

By MRS. J. M. SIMPSON

Women and men are not, in the organization, on a different footing, and either may be master of a grange, or lecturer. In practice it developes that the lecturer is more frequently a woman. The women members do not meet separately, but the general program at the grange meeting includes numbers discussing women's activities and interests so far as the grange affects them. There are two regular monthly meetings of the organization, the lecturer putting on one and the master the other. The state lecturer issues a general outline which the programs will follow, supplementing, perhaps, with the local demands of the hour the topics suggested by the state lecturer for discussion each month. The state lecturer's program, as issued this year, for instance, suggested as the women's part of the local lecturer's July programs a discussion by the sisters severally of "The piece of work that it has been most satisfaction to me to do." The October program planned by the state lecturer included discussion, this time on the part of the men of the grange, of the question, "Has woman measured up to what was expected of her in her use of the ballot?"

The musical and dramatic numbers on the program naturally draw upon the activities of the women of the organization extensively, and refreshments are not an infrequent item in the order of the regular meetings. In the initiation of members into the fourth degree, or Pomona grange, refreshments enter formally into the order of procedure. The Pomona grange is a county-wide organization drawing its members from the various locals by its own election, and aiding in bringing the locals to concerted and efficient action.

Mrs. Harriet Lycette of the city home bureau of Spokane and Miss Inez Arnequist of the county home bureau are members of the East Spokane grange, a fact that makes for the helpful diffusion among its members of the home arts which these leaders among the women of the county are advancing in the homes in general. Grange membership is open to teachers and they widely avail themselves of the privilege.

Dress Forms Popular

"It is not so much the amount of money saved by using the home-made dress forms that gives them their value as it is the fact that they will be nearer the shape of the model than any adjustable form that can be purchased," says Miss Elmina White, home demonstration agent of Pierce county. In order to have a dress form which will give good results one would have to pay quite a sum and then it would not be as true as the one made on the model for $1.50.

"We are striving to show what can be done with what is already on hand," continued Miss White, "and not so much to see how much can be put in the bank. In the farm homes there are so many clothes to be made over and new ones to be made that something of the kind is almost a necessity.

There were 494 of these dress forms made in Pierce county last year by the farm women, and 484 hats. For 1922 the home economics work will include much nutrition work, most of which will be done in the public schools.

Scientists, as Well as Practical Farmers, Contribute to Your State Farm Weekly

In addition to printing hundreds of articles from practical farmers, fruitgrowers, market gardeners, stock breeders and dairymen, The Washington Farmer gives space to the scientist and the agricultural expert who carry on careful research work with regard to seeds, plant growth, soils, fertilizers, the care and breeding of poultry and farm animals, the eradication of pests, and many other matters which have a close bearing on agricultural production and prosperity of this state. He has a vast store of information garnered together from many sources which can help solve the farm problems peculiar to this section. What the experimenters at the agricultural schools are finding out, what the scientists who specialize on agricultural problems discover are given to our readers in complete, reliable form. This feature helps round out the paper, and gives it greater value to those who make a business of farming.

Your state farm weekly gives big value at low cost on account of its cooperative subscription plan.

We say to our friends: "Send your subscription orders direct. Get your neighbor to do the same. We will give you and your neighbor the benefit of every penny which would ordinarily go to the agent handling the subscription."

If you believe in cooperation, help us make our plan an even greater success during the coming year than it has been in the past. Send in your order if you haven't already done so, and let as many neighbors as possible know about our money-saving plan.

Subscription Rates of The Washington Farmer:

$1.00 for Five Years

25 Cents for 1 Year.
50 Cents for 3 Years.
In Canada add 1 cent a copy for extra postage.

Feb. 16, 1922.

If your subscription is already paid in advance, it will be extended from the date to which it is paid.

FAMILY CIRCLE

ALICE BARLAND
EDITORIAL CONTRIBUTOR

Experience Letters

From Our Family Circle Women

Dear Family Circle: This is a hard time of the year on hands when we have to handle so much fuel and so constantly wash our hands afterward. Several sisters have sent in remedies which are good to have on hand for every member of the family and especially children who often have chapped hands in winter. One sister says it is helpful to rinse the hands in vinegar after having them in soapy water. Another says oil of tar is good.

Another says she finds a lotion of equal parts of alcohol, bay rum and glycerine very healing and it has been beneficial to many to whom she has recommended it.

I have received several recipes for cream puffs. They are almost exactly alike, so you mustn't be offended if I print but one. —A. W. B.

Cream puffs—Butter 1 cup, boiling water 1 cup, flour 1 cup, eggs 4. Pour butter and water into a sauce pan and when boiling add the flour, beating hard. Remove from the fire and add the eggs unbeaten, one at a time, beating till thoroughly mixed. Drop by spoonfuls on a buttered pan as nearly round as you can make them, leaving space for them to spread. Bake 30 minutes in a moderate oven. This makes 12 large or from 15 to 18 small puffs.

Cream to fill—One cup sugar, 1-3 cup corn starch, pinch of salt, 1 egg, 2 cups scalded milk, 1 teaspoon vanilla; mix dry ingredients, add egg slightly beaten and stir into this gradually the scalded milk. Cook about 15 minutes in a double boiler stirring frequently. To test puffs take one from the oven and if it doesn't fall they are done. I sometimes add 2 teaspoons of baking powder and use but 3 eggs.—Mrs. H. B. B.

One says the tops of the puffs may be brushed with a little beaten egg and milk before putting into the oven. This makes them crisp and brown.

Dear Mrs. Barland: I have very good success in raising little chickens and will tell how I manage. Perhaps it will help some one.

I select a quiet old mother hen and grease her thoroughly in case of mites and put her in a clean pen on grass and give her all the chickens she can care for, sometimes as many as 35, when the weather is warm. I do this even when I hatch in incubators.

I save all my sour milk and make it into curd, scald it and drain out all the whey. When the days are cold and windy I sprinkle a little ginger over the curd and feed it to the little chickens.

When I have plenty of sour milk I keep on feeding the curd till the chickens are large enough to fry, giving it with other food, of course. So far I have never had sick chickens—Mrs. H. C.

Dear Family Circle: I enjoy THE FARMER very much and will send a recipe for vinegar pie which was requested.

Vinegar pie—One egg, 1 heaping tablespoon of flour, 1 teacup sugar; beat well together and add 1 tablespoon of sharp vinegar, teacup cold water, flavor with nutmeg and bake in bottom crust.

Lemon pie—Juice and grated rind of 1 lemon and 1 orange, 2 cups sugar, yolks of 4 eggs, 2 cups hot water, 2 heaping tablespoons of corn starch. Cream together the juice of lemon and orange, sugar and yolks of eggs, add hot water and let come to a boil then stir in corn starch dissolved in a little cold water. When cool put into baked crust and cover with meringue made as follows: Beat whites of 4 eggs to a stiff froth, add 4 tablespoons of powdered sugar and brown slightly in oven. This will make two pies.—Mrs. Ray Irion, Monida, Mont.

Another sister sends an old-fashioned way to dry pumpkin, here it is: Cut the pumpkin in two parts, remove all seeds and stringy substance and then cut in rings and hang on a line to dry taking care to keep separate as they will mold if allowed to touch. They must dry in a warm place, behind a stove or in the hot sun. When perfectly dry put in a sack and hang in a dry place.

When you want to use put in a kettle on back of stove and let soak or soak over night then stew in the same water it soaked in.

Dear Mrs. Barland: Having seen requests in THE FARMER for recipes for old-fashioned black molasses cookies, dried pumpkin and grape juice, I am sending mine.

Molasses cookies—One pint molasses, 1-2 cup water or coffee, 1 cup shortening, 1-2 cup sugar, 1 teaspoon soda, flour enough to make dough stiff enough to roll; ginger may be added if desired.

Dried pumpkin—Cook without peeling till as dry as possible then put through a colander. Turn out on plates in layers and dry, turning frequently. When ready to use soak over night and in the morning stew to original softness and make the pies as with the fresh.—Mrs. I. J. H.

This sister sends also a recipe for grape juice which will appear when the season for it comes again.—A. W. B.

Quite a number of sisters have been so kind as to give methods of canning pumpkin, but as all use about the same system I will print but one.

Canning pumpkin—Peel and cut in pieces, cook till tender, fill glass jar to 1 1-2 inches of top then finish filling with warm water; put on rubbers and cover, place in boiler with false bottom and fill with water to the neck of jars and boil for one hour after water begins to boil. Leave the tops loose on the jars till you remove from boiler then tighten. Some use old rubbers while boiling and put on new ones before tightening after removing from the boiler. I have canned pumpkin left from year to year as good as when put up.—Mrs. Henry Eddy, Jerome, Idaho.

Dear Mrs. Barland: I am sending recipe for ginger snaps for Mrs. F. A. H. who wants one like those we buy in the stores. Every one who eats these say they are very much like the store kind.

Ginger snaps—One cup each of sugar, molasses and butter and lard half and half, 3 eggs, 3 tablespoons of ginger, 1 tablespoon soda dissolved in the molasses, a little salt, flour to roll nicely. Use no milk or water and use soda and ginger as given above. Many think this is a mistake, but it isn't, just try it. The snaps improve with age.—S. A.

I have a letter from a sister who signs herself "Mrs. F. J." She may have hives or eczema, but she must write again and sign her name so I can write to her personally. I am unable to give advice without more information about her trouble.—Alice W. Barland.

Hints for the Homemaker

By Mrs. C. B. Smith.

White spots on varnished surfaces may be removed by rubbing vigorously with a soft cloth moistened with essence of peppermint.

Touch the under side of scuffed leather on shoes with mucilage, press down smooth, then apply a coat of shoe polish. When dry, the shoes will look like new.

For rainy days try coating a few pairs of the men's work gloves with melted paraffin. It will render them waterproof for some time.

For a change, put several whole cloves in prunes when cooking them. The flavor is new and pleasing, if not too many are used.

If shelves are used for shoes and various other articles which usually litter the closet floor, much stooping will be dispensed with when the latter is swept.

When renovating furniture with common paint, it is well to remember that an outside paint requires the addition of a considerable amount of turpentine to prevent the articles from acquiring an objectionable stickiness in damp weather. If a good enamel is not available the best substitute is a good indoor paint.

Swiss Steak

Get a round steak 1½ inches thick. Lay it on a bread board and dredge with flour. Beat well with a mallet or the hammer end of a hatchet, continuing to dredge with flour till the meat will absorb no more. Beat and dredge both sides of the steak. Then put the meat into a hot, well buttered skillet and brown well on both sides. Pour over it a cup of boiling water and cover. Simmer slowly for two hours adding hot water as it evaporates and turning often to keep it from sticking to the bottom of the skillet. Remove to a buttered dripping pan, season with salt and pepper, dot thickly with butter, and brown in the oven for 15 minutes. Mix the gravy from the skillet with the drippings from the steak and pour over the meat when it is ready to serve. E. M. A.

MAKING CANNED FRUIT.

Often there are a few jars of old fruit left over when canning times comes again and we wish some means of distinguishing between the old and the new. It is somewhat of an expense to buy books of gummed markers each time, so all through the year we save the flaps of all used envelopes that still have a gummed edge. We tear them off and put away in a certain drawer, and it is surprising how rapidly they accumulate until there is a sufficient supply by next canning time.—G. R. S.

Just Folks

Multiply the littles of life.

To see is better than to learn.

Curiosities are what you don't know.

Adaptation is better than adoption.

The truest enjoyment comes from ideals.

If you can busy yourself you are not neglected.

Uninterrupted success is bad for him who succeeds.

Making the worse appear the better is one of the fine arts.

Current genius finds its place in dressing up current notions.

There is no such thing as a final finish among the affairs of men. E.A.S

At Gift Time

Save all usable pieces of tissue paper and bits of ribbon that come about gifts. Press with a warm iron, fold the paper, and wind the ribbon about a card to keep it in shape, then put away where they can easily be found when gifts are to be sent out. We have a suitcase in which we keep such paper and ribbons, small, clean boxes, left-over stickers, cards to be attached to gifts, postcards that are out of season. This suitcase is particularly useful at the holiday time; we use what we can of the store before starting on new materials.—G. R. S.

PUMPKIN PIE RECIPE.

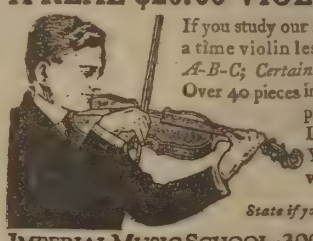
Mrs. T. D. Weger of Deer Park, Wash., has kindly sent THE FARMER her favorite recipe for making pumpkin pie. It follows:

One pint of pumpkin pulp, one pint of rich milk, three eggs, one cup of grated coconut, one tablespoon of butter, one-half teaspoon of salt, one-half teaspoon of ginger, one teaspoon of vanilla, one cup of sugar, one-half teaspoon of nutmeg.

Mix the dry ingredients together thoroughly. Beat the yolks and whites of eggs separately.

Color Your Butter

"Dandelion Butter Color" Gives That Golden June Shade and Costs Really Nothing. Read!



Before churning add one-half teaspoonful to each gallon of cream and out of your churn comes butter of Golden June shade to bring you top prices. "Dandelion Butter Color" costs nothing because each ounce used adds ounce of weight to butter. Large bottles cost only 35 cents at drug or grocery stores. Purely vegetable, harmless, meets all state and national food laws. Used for 50 years by all large creameries. Doesn't color buttermilk. Absolutely tasteless.

Built Better Because Built With a Creator's Pride

Back in 1909, Samuel D. Strong, of the Homer Furnace Company, originated the pipeless furnace.

The true reason for the pronounced supremacy of the Homer Pipeless Furnace is, therefore, more than a matter of good materials and skilled workmanship.

The product is built better, because into it goes the ideals and the constant striving for perfection of the creator, working to make his dream a practical reality.

The creative genius of Mr. Strong is further evidenced by several exclusive Homer features—for instance, the Thermo-Seal Inner Lining, which keeps the warm air from being wasted by surface radiation; the famous Homer double ribbed fire-pot; the rust-resisting Strokel iron castings.

Can we send you—free—our book, "The History of the Pipeless Furnace?"

THE MISUNDERSTOOD CALORY.

No discussion of food values would be complete without reference to the "calory." It must be conceded, however, that the calory does not hold the important place in the food world it occupied a few years ago.

Dr. Copeland.

In some restaurants the menu card indicates the calorie value of each serving of food. By selecting such foods as make a sum total of eight or nine hundred calories you are supposed to have given yourself an ideal meal.

What is a calory?

A calory is the standard for measuring heat production. As the yard is a standard for measuring length, and the quart is a standard for measuring liquids, the calory is the standard for measuring heat energy.

The amount of heat necessary to raise the temperature of two quarts of water one degree Farenheit is called "one calory."

Food taken into the body acts just as fuel does in a furnace. It "burns" and generates heat.

Carbohydrates and protein are about equal in calories per ounce, while fat contains about twice as much as either of the other foods. This is not surprising, because we all know that fat or oil will make a very hot fire.

An average helping of lean beef weighs about three ounces. This amount of lean beef contains 80 calories in protein and 20 calories in fat.

A portion of bacon weighs about one-half an ounce. It contains seven calories in protein and 93 in fat.

An ounce of sugar contains 100 calories in carbohydrates.

An egg contains 36 calories in protein and 64 in fat.

Six ounces of milk contain 61 calories in fat, 22 in protein, and 34 in carbohydrates.

About 100 calories are supplied by an ounce of honey, cheese, crackers, biscuits, ripe olives, a cereal or a sandwich of any sort, or by a baked potato, a small chop or a slice of bread.

Theoretically, the average man requires every day food containing 2500 calories. If he works at hard, physical labor, he needs more.

Oatmeal with cream and sugar gives you 400 calories. Coffee with cream and sugar, 400 calories. Buttered toast at least 200 calories. This would be considered a small breakfast by most persons, yet it totals more in calories—1000—than the body requires at one of the three meals.

If you will study the caloric contents of this sample breakfast you will see at once how much better off you would be to omit the coffee, and, in its place, to take half a pint of good milk. Then you will have room for a couple of eggs, and still keep your intake to about a thousand calories.

Ordinarily, the proportions of food required are 10 per cent of protein, 25 per cent of fat, and 65 per cent of carbohydrates. In calories, this would be 250 of protein, about 600 of fat, and 1650 of carbohydrates.

Give the calory system a little thought, apply it for a day or two to your eating.

Latest High Class Patterns for the Home

Please order the patterns you desire at least two or three weeks before you wish to use them. Desiring to obtain the latest high-class patterns for its readers, THE FARMER has made arrangements to have them sent direct from the east, and under present mailing conditions it takes about that time for them to reach you

3900. Lady's Dress—Cut in six sizes: 34, 36, 38, 40, 42, and 44 inches bust measure. A 38-inch size requires 3 1-2 yards of 54-inch material. The width at the foot is 2 1-4 yards. Price 10 cents.

3894. Girl's Dress—Cut in four sizes: 10, 12, 14, and 16 years. A 12-year size requires 4 1-8 yards of 42-inch material. Price 10 cents.

3872-3871. Lady's Costume—Blouse 3872 cut in six sizes: 34, 36, 38, 40, 42, and 44 inches bust measure. Skirt 3871 cut in eight sizes: 24, 26, 28, 30, 32, 34, 36, and 38 inches waist measure. The width at the foot is 2 yards. To make this suit for a medium size will require 4 3-4 yards of 44-inch material. Two separate patterns, 10 cents for each.

8391-3898. Lady's Costume—Blouse 3891 cut in six sizes: 34, 36, 38, 40, 42, and 44 inches bust measure. Skirt 3898 cut in six sizes: 24, 26, 28, 30, 32, and 34 inches waist measure. Its width at the foot is about 2 yards. To make the dress for a medium size requires 5 3-8 yards of 40-inch material. Two separate patterns, 10 cents for each pattern.

3705. Lady's House Dress—Cut in seven sizes: 36, 38, 40, 42, 44, 46, and 48 inches bust measure. A 38-inch size will require 6 3-4 yards of 27-inch material. The width at the foot is 2 1-4 yards. Price, 10 cents.

3896. Lady's Apron—Cut in four sizes: Small, medium, large and extra large. A medium size will require 2 3-4 yards of 36-inch material. Price, 10 cents.

3496. Girl's Dress—Cut in four sizes: 8, 10, 12, and 14 years. A 12-year size will require 2 5-8 yards for the midy and 3 1-4 yards of 27-inch material for the skirt, collar and cuffs. Price, 10 cents.

3686. Lady's Dress—Cut in six sizes: 34, 36, 38, 40, 42, and 44 inches bust measure. A 38-inch size will require 4 7-8 yards of 42-inch material. For panel, collar and cuffs of contrasting material 1 3-8 yards is required. Price, 10 cents.

3674. A Comfortable Corset Substitute—Cut in four sizes: Small, 34-36; medium, 38-40; large, 42-44; and extra large, 46-48 inches bust measure. A medium size requires 1 1-2 yards of 32-inch material. Price, 10 cents.

3723. Girl's Dress—Cut in four sizes: 4, 6, 8, and 10 years. An 8-year size requires 3 3-4 yards of 27-inch material. Price, 10 cents.

3595. Girl's Bloomer Dress—Cut in four sizes. 4, 6, 8, and 10 years. An 8-year size will require 2 3-4 yards of 32-inch material for the dress in bloomer style. With plain skirt it will require 2 3-8 yards. Price, 10 cents.

3887. Girl's Dress—Cut in four sizes: 8, 10, 12, and 14 years. A 12-year size requires 4 1-4 yards of 32-inch material. Price, 10 cents.

High Points in News of the Week

Four days after the adjournment of the Washington conference for the limitation of armaments President Harding last Friday appeared in person before the United States senate and submitted to it the seven treaties that had been agreed upon by this conference. Together with these treaties he laid before the senate the complete minutes of both plenary sessions and of all committee meetings held throughout the conference.

The president realized fully that in laying all these official matters before the senate and thereby before the American public as a whole he was setting a precedent in national and international diplomatic procedure. He referred to the complete minutes of the sessions and committee meetings as "a new accompaniment to the executive report of a treaty," and added the explanation, "but they are fitting testimonial to that open and simpler diplomacy for which the world has asked, and the practice of which contributed largely to the success of the conference so recently adjourned I hope they will facilitate that ample and helpful understanding which is desirable in the senate, and reflect that understanding which was the keynote of the conference itself."

The Washington conference convened on Armistice day, November 11. It adjourned on Monday, February 6. The American delegation, headed by Secretary of State Hughes, immediately prepared its formal report and submitted it to President Harding, who had called the conference. The treaties were submitted to the senate for consideration February 10, one day less than three months after the conference convened.

The seven treaties which the senate of the United States and corresponding treaty-making bodies in England, France, Italy, Japan, China and the other nations participating in the conference are considering for ratification are:

The covenant of limitation to naval armament between our republic, the British empire, France, Italy and Japan.

The treaty between the same powers in relation to the use of submarines and noxious gases in warfare.

The treaty between the United States, the British empire, France and Japan, relating to their insular possessions and their insular dominions in the Pacific.

A declaration accompanying the four-power treaty reserving American rights in mandated territory.

An agreement supplementary to the four-power treaty defining the application of the term "insular possession and insular dominions" as relating to Japan.

A treaty between the nine powers in the principles and policies to be followed in matters concerning China.

A treaty between the nine powers relating to Chinese customs tariff.

While there will undoubtedly be some opposition in the senate to several, if not all, of these treaties, indications are that the third above-mentioned, frequently called the four-power pact, will be the one against which the greatest opposition will be expressed. Following the address of President Harding last Friday, however, several of the leaders in the expected opposition have expressed themselves as much more favorable to the adoption of the entire treaty program. Senators Borah of Idaho and Johnson of California, who have been listed as "irreconcilables" on the treaty program, were apparently convinced that this four-power treaty lacked what they had believed to be dangerous international provisions. With special reference to this treaty, which has been declared by some to contain provisions similar to the objectionable ones in the league of nations treaty, President Harding said:

"The world has been hungering for a better relationship for centuries since it has attained its larger consciousness. The conception of the league of nations was a response to a manifest world hunger. Whatever its fate, whether it achieves the great things hoped for, or comes to supersedure, or to failure, the American unwillingness to be a part of it has been expressed. That unwillingness has been kept in mind, and the treaties submitted today have no semblance of relationships save as the wish to promote peace has been common inspiration.

"The four-power treaty contains no war commitment. It covenants the respect of each nation's rights in relation to its insular possessions. In case of controversy between the covenanting powers it is agreed to confer and seek adjustment and if said rights are threatened by the aggressive action of any outside power, these friendly powers, respecting one another, are to communicate, perhaps confer, in order to understand what action may be taken, jointly or separately, to meet a menacing situation. There is no commitment to armed force, no alliance, no written or moral obligation to join in defense, no expressed or implied commitment to arrive at any agreement except in accordance with our constitutional methods.

"It is easy to believe, however, that such a conference of the four powers is a moral warning that an aggressive nation, giving affront to the four great powers ready to focus world opinion on a given controversy, would be embarking on a hazardous enterprise.

"Frankly, senators, if nations may not safely agree to respect each other's rights and may not agree to confer if one party to the compact threatens to trespass, or may not agree to advise if one party to the pact is threatened by an outside power, then all concerted efforts to tranquilize the world and stabilize peace must be flung to the winds. Either these treaties must have your cordial sanction or every proclaimed desire to promote peace and prevent war becomes a hollow mockery."

* * *

General George W. Goethals is this week completing his two weeks' personal investigation of the proposed Columbia basin irrigation project and is expected soon to make an official report as to its feasibility. The first week was spent in the field, during which he covered the territory from the proposed water supply source on the Pend Oreille river to the land to be irrigated. He also made personal investigation of the conditions of the Columbia river at the point that has been considered for the building of a dam for the purpose of providing irrigation water by a large pumping system, instead of by the gravity system from the Pend Oreille. The second week General Goethals spent in the office of the Columbia basin survey commission at Spokane studying data that has been compiled by the commission and by the federal government.

Pius XI. was crowned pope in the basilica of St. Peter's Sunday amid scenes of pomp and enthusiasm, in the presence of princes and dignitaries of the church, the diplomatic representatives of foreign countries, members of the Roman aristocracy and a vast assemblage filling the great structure to the very doors. The ancient custom was carried out with impressive ceremonies, and the newly elected pontiff now occupies the throne of the first pope reported crowned, Leo III., who reigned from 795 to 816.

Farm Business and Markets Outlook

(Continued from page five.)

sacked round whites f. o. b. shipping points are quoted at $1.35 to $1.60 per 100 lbs. At Idaho shipping points growers are receiving 90c to $1 per 100 lbs. for Rurals in wagonloads. The Chicago carlot market is quoted at $1.70 to $1.85 for round whites with most city wholesale markets at $2.25 to $2.45.

Apple markets have advanced slightly with Baldwins now quoted at $7.50 to $8 per barrel in wholesale markets and $7 to $7.25 per barrel at New York shipping points. Winesaps and Spitzenbergs are bringing $3 to $3.50 per box for extra fancy stock.

Mention THE WASHINGTON FARMER when writing advertisers.

How would you catch a squirrel? Go up the tree and talk nutty to it.—Sent in by Violet Ruby, Snohomish county, Wash.

Ruby Woods enjoys reading the stories and letters in our paper. She is in the seventh grade. Mr. Witt is her teacher. Ruby likes school. Her home is in northern Washington.

HAS GOOD TEACHER.

Melvin Hendrickson, one of our Washington graduates, sent us the picture of his twin pups, and I am sure you would all like to see them, for they are very cute. The picture will not make a good cut, though, so we can not print it. We thank Melvin for sending it. Melvin is in the seventh grade. Mr. Petite, his teacher, is a very good one.

START "LITERARY."

We have started "literary" over here and we think it is a success. At one meeting I sang a song entitled "In Dear, Old Washington." At the teachers' institute also I sang a song. I am in the seventh grade. We have two reading circle books to read this year. "Tales of the Tepee" and "Community Hygiene." — Lucille McKinney, Washington Children's Corner graduate.

FINDS PETS IN THE WOODS.

Once upon a time I went for a walk in the country. It was a nice day. The sun was shining and the beautiful flowers were in bloom.

When I was walking I met a cat. She came crying: "Meow! meow!" Then she walked ahead of me till she came to a thick brush where she stopped and I stopped, too. There, in that thick woods, stood a little box with four little baby kittens in it. I took the mother cat and her little babies and went home. I kept them for my pets, and they live happily now with their mother.—Martha. (What is your last name, Martha? If you will send it to Aunt Nellie, with your address, we shall send you The Junior Farmer.—Aunt Nellie.)

LETTERS WELCOMED BY AUNT NELLIE.

Among recent letters received by Aunt Nellie are those from cousins whose names follow. A few of these will be published each week in the regular edition of THE FARMER, and others will appear from time to time in The Junior Farmer:

BEDTIME STORIES

By THORNTON W. BURGESS.

Copyright, 1919, T. W. B.

JERRY HAS ANOTHER SECRET.

No one but Billy Mink and little Joe Otter had found the secret door to Jerry Muskrat's new house. Billy Mink had watched Jerry dive from the top of the new house, and Jerry had not come up again for a long, long, long time. Billy Mink and Little Joe Otter had put their two little brown heads together and decided that Jerry Muskrat's secret door must be way down under water. So one day when Jerry Muskrat was off hunting for freshwater clams, Billy Mink proposed that they hunt for Jerry's secret door.

"I'll beat you down to the bottom of the Smiling Pool," cried Little Joe Otter. Splash! The two little rascals were under water, and there was nothing but a great big ripple to tell where they had gone. It didn't take them long to find Jerry Muskrat's secret door, for really it wasn'tsecret at all for the little people of th eSmiling Pool. Grandfather Frog's grandchildren, the pollywogs, knew all about it. So did Mr. and Mrs. Trout. Billy Mink peeped inside. Then they swam back to the big rock and climbed up on it to dry off.

"Let's not say anything about it to Jerry Muskrat," said Billy Mink. "We'll get him to play hide andseek. Of course he'll hide in his new house. Then we'll give him a surprise by finding the secret door."

So as soon as Jerry Muskrat came in sight, Billy Mink shouted to him: "Hi, Jerry Muskrat! Bet you can't hide where we can't find you."

Jerry Muskrat's eyes twinkled. "Will you give me two minutes to hide?" he asked.

Billy Mink and Little Joe Otter agreed. Jerry Muskrat took a long breath and then dived out of sight. Little Joe Otter nudged Billy Mink, and they bot hchuckled as they watched Jerry Muskrat disappear. They waited two minutes.

"Now we will give Jerry Muskrat a surprise," said Billy Mink, as they prepared to dive into the Smiling Pool.

Grandfather Frog, sitting on his big green lily pad, chuckled to himself as he

Grandfather Frog, siting on his big green lily pad, chucked to himself.

watched them. "Chugarum!" said Grandfather Frog. "Somebody is going to be surprised, sure enough, but I'm not so sure that it will be Jerry Muskrat."

Billy Mink and little Joe Otter swam straight to Jerry Muskrat's secret door and slipped inside. They were in the nice little room Jerry had built under water, adn right up above was the passage to Jerry's bedroom. It was so easy that they wanted to laugh, but they couldn't because they were under water, you know, and had to hold their breath.

Up the passage they scrambled, and in a minute were in Jerry Muskrat's snug little bedroom which is warm and dry because it is above water.

"Didn't fool us this time, did you, Jerry Muskrat?" shouted Billy Mink. Then Billy blinked both eyes. Jerry Muskrat wasn't to be seen, no sir; Jerry Muskrat wasn't to be seen! They pulled his soft, warm bed of grass to pieces, but no Jerry Muskrat.

Wherewas he? Perhaps if you ask Grandfather Frog or write to him he will tell you, for this is Jerry Muskrat's other secret, and Grandfather Frog is the only one who knows it.

TUESDAY, February 21—Olive Magnuson, 9 years old; Lawrence McNeil, 9; Emman Yeomen, 10.

WEDNESDAY, February 22—George Ludwig, 8 years old; Earl Luiten, 11.

In each issue a list of the cousins' birthdays for the week will be published. At the close of each letter you write be sure to tell how old you are and when your birthday comes.

Floors—

Refinish Yours Yourself

with paint or varnish—We tell how

IT'S a simple matter, if you cannot get a painter to refinish your farm house floors yourself.

Fuller's Floor Paints are the finest finishes and last the longest. They dry over night so you can walk on them in the morning.

They are made for the amateur's use as well as the painter's—they flow evenly, spread well, and do not streak. The result is a smooth and lustrous finish.

Women can apply these floor paints as well as men.

Fuller makes a special paint for every purpose and our Rubber Cement Floor Paint is especially adapttable for farm house floors.

Two popular varnishes—"Fullerwear," the Spar Varnish for every purpose, will not mar, scratch white or turn white when hot dishes and hot water come in contact with it. Use "Fullerwear" for any varnishable surface.

"Fifteen-for-Floors" Varnish, a high gloss varnish, extremely transparent, which will give your floors that desired, well-kept appearance.

We also make a special line of paints, varnishes, enamels, etc., for all kinds of interior decorating. We specialize in these materials and methods after 72 years' experience with paints and painting practice.

We are one of the largest paint manufacturers in the United States.

Why Our House Paints Are Good

Fuller House Paints are made from the best materials —pure PIONEER WHITE LEAD, pure linseed oil, zinc and color in scientifically exact proportions, arrived at through many years of manufacture.

Our process super-purifies and "whitens" the lead base. It must be fine enough to pass through a silk screen with 40,000 meshes to the square inch. A fine lead means easier spreading and more elastic, tougher protective coat.

If properly applied, such house paints will last five or more times as long as cheap paint, and looks better through the years.

Fuller's SPECIFICATION Farm Paints

House Paint - Barn & Roof Paint
Wagon Paint - Rubber Cement Floor Paint

M'f'd by W. P. FULLER & CO., San Francisco

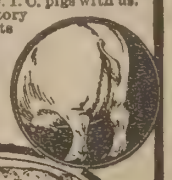
STANDS
for all that is best in the Swine Business

The Ohio Improved Chester possesses strong characteristics peculiar to the breed. Bred continuously since 1863. Maintaining a high standard of excellence ever since. Our own Association records have been persistently and consistently maintained since 1897.



The O. I. C. Hog is large, strong, healthy, and vigorous; matures quickly; very prolific. They are good breeders, good mothers—good disposition. They are big money makers for the farmers; good porkers, and are good prize winners. The breed is known throughout the world. Every civilized nation has bought more or less from our breeders, and are continuing to do so with the greatest satisfaction and best results.

They Are WHITE HOGS of Quality

Every O. I. C. breeder should support his own Association and protect his own interests by promptly recording his O. I. C. pigs with us.

Write for Origin and History of the O. I. C. Send 10 cents for trial subscription to the O. I. C. Swine Breeders Guide. It represents the Breed. Address

Carnation Buys Herd

Carnation stock farm of Seattle, Wash., recently closed a deal for the entire herd of Holsteins of F. R. Beals of Tillamook, Ore. The herd consists of 68 head and has been built up by Mr. Beals at much expense and by careful selection and breeding. It includes the famous cow, Lady Aaggie Ormsby of Rock, that was first in class and senior and grand champion at the Oregon state fair and the Pacific International Live Stock show, and her son and daughter, both of whom were prize winners at the shows mentioned. It also includes Chimacum Wayne Monarch Cornucopia, the world record senior 3-year-old in the 305-day division, and a 29-pound daughter of Hollywood Lilith Palmyra. Twenty-five daughters of Johanna Bonheur Sir Fayne were among the herd. The entire lot are of good type and most of the cows in milk have been tested and have good records. Several now on yearly test will have their records completed on the Carnation farm. The purchasers report that the herd arrived at the farm all in good condition.

Burton Hartog, DeKol Ormsby, the son of Lady Aaggie, referred to above, has been sold at private sale to the Pabst stock farm at Oconomowoc, Wis., where he will be used as the junior herd sire. This firm tried to buy him at the Pacific International, but Mr. Beals was not at that time ready to sell. Lady Aaggie's daughter will be consigned to the Brentwood sale, where she is confidently expected to bring a long price. The amount paid for the herd is not officially given out, but is understood to average above $650 a head. Mr. Beals is known to have refused $5000 for Lady Aaggie. The object is to cross this good herd with the great sire, Matador Segis Walker, and with the son of the world record cow, Segis Pietertje Prospect, by him. The Carnation company is consigning about 20 head to the Brentwood sale, mostly by Matador Segis Walker and Carnation King Sylvia.

Holstein breeders generally, and those of Oregon in particular, deeply regret Mr. Beals' retirement from Holstein breeding, and Mr. Beals regrets it himself. But he finds that his various interests are such that he can not give his cattle the attention they deserve. He feels that they have gone into hands where the line of breeding he had so carefully built up will be carried on and crossed with the great producing and show strains of the breed.

RICHARDS WILL SELL OUT.

Breeders of the northwest, especially hog men, will be interested to learn of the announcement of Jesse S. Richards of Virginia, Idaho, that he is going out of the hog business. He has for several years been secretary of the Ogden Live Stock show and closely connected with the business interests of that city. He has recently accepted the position of secretary of the chamber of commerce of Ogden and is, therefore, placing his entire herd of Duroc swine on the market. The herd includes some 200 head, many of which are heavy winners on the show circuits, with several grand champions among them.

PORTLAND SHORTHORN SALE.

March 22 is the date that has been selected by the Northwest Shorthorn Breeders' association for its annual spring sale at Portland. On that date about 60 head consigned by breeders throughout the northwest will be offered at public auction at the Pacific International show grounds. The sale is under the management of A. E. Lawson, northwestern representative of the American Shorthorn Breeders' association. This will be the secnd consignment sale of the northwest association this year, the first being held at Spokane February 22, during the northwest live stock conference.

SEVEN PER CENT BUTTERFAT.

A record of 10,000 pounds of milk and 700 pounds of butter in 305 days has just been made by Baby Buff's Adelaide, a Jersey owned by C. A. Phipps of Spanaway, Pierce county, Wash. The animal has been on official test for the past year and her test has run as high as 7 per cent butterfat.

SALE OF BERKSHIRES.

Fred Sinnes of Prosser, Wash., announces his first public sale of registered Berkshire swine, to be held at the D. C. Bunn farm, three miles east of Prosser, on March 8.

TWO GOOD SWINE SALES.

Two excellent swine sales were held in the Yakima valley last week, those of W. A. May of Toppenish, and the Duroc Jersey association. A detailed report of these sales will be given soon.

The Washington Farmer Index

The index of The Washington Farmer for the months of July to December, 1921, inclusive, is now ready for distribution. As long as the supply lasts, any reader may obtain a copy upon request. A 2-cent stamp should be enclosed.

$1.99

State Size

Order your pair quick—while this bargain offer lasts. Wonderful work shoe for men. Has soft, strong uppers that resist barnyard acids. Solid leather insoles. All seams stitched with waxed thread. Strong leather soles. Wide widths. Sizes 6 to 11. Order by No. 53A758. Send no money. Pay $1.99 and postage on arrival. Order boys' sizes, 1 to 5½ by No. 53A554. Price $1.95. Order little gents' sizes 9 to 13½ by No. 53A555. Price $1.79 and postage on arrival. Mention size.

Men's Fine Dress Shoes

Wonderful quality, superb value in men's blucher shoe of black soft gunmetal finished leather. Leather insole and extension oak outsoles. Perforated tips. Sizes 6 to 11. Wide widths

$2.39

Give size.

Order black by No. 53A674. Pay $2.39 and postage on arrival. Order brown by No. 53A675. Send no money. Pay $2.79 and postage on arrival. State size.

Boys' Blucher Bargain

Order little boys' gunmetal blucher, similar to above, sizes 9 to 13½, by No. 53A590. Pay $1.79 and postage on arrival. Order same style for big boys, sizes 1 to 5½, by No. 53A589. Pay $1.99 and postage on arrival. Always mention size.

MEN—Don't Miss This

A smashing bargain in an all felt hi-cut that will prove what wonderful values you get from Sharood. Men's 9½-in. hi-cut with thick felt soles and heels, warm felt lining and high felt tops. Exceptionally durable and amazingly low priced here. Sizes 6 to 11. Wide widths.

$1.49

Give size.

Send Now

Order by No. 53A880. Send no money. Pay $1.49 and postage on arrival. Money back if not satisfied. Mention size wanted.

Men's Storm Boots

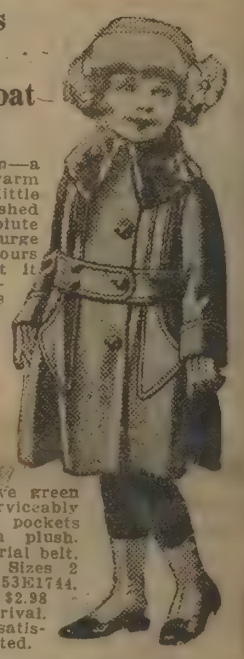
$3.98

Wonderful 11-in. hi-cut storm boots of soft brown cowhide leather, absolutely barnyard proof. Solid leather, double chrome outsoles, sewed and nailed, solid leather insoles; durable counters; dirt-excluding bellows tongues. Sewed throughout with heavy waxed linen thread. Sizes 6 to 12. Wide widths. Order by No. 53A770. Send no money. Pay $3.98 and postage on arrival. State size.

Similar style boys' brown calf boots, double oak soles, sewed and nailed; bellows tongue. Order big boys' sizes, 1 to 6, by No. 53A570. Price $2.79. Order small boys' sizes, 9 to 13½, by No. 53A571. Price $2.39. State size.

Brogue, Dress Shoe Goodyear Welt Brown Russian Calf

$3.98



Give Size

Most popular color men's dress shoe for spring. Dark mahogany brown Russian calf—new brogue style, with full vamp (not cut off), and fancy perforations on tip and vamp, as pictured. Extension Goodyear sewed soles; pure gum rubber heels; leather insoles. Sizes 6 to 11. Wide widths. Order by No. 53A635. Pay $3.98 and postage on arrival.

Children's Plush Trimmed Coat Bargain

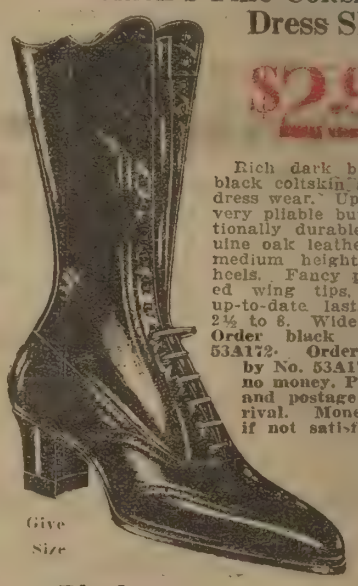
Yes, a bargain—a startling value in warm winter coat for little girls. We have smashed the price to absolute rock bottom and urge you to send for yours quickly. Don't put it off—don't risk disappointment. Stocks limited.

$2.98

Beautiful belted model of a heavy material in attractive green mixture. Very serviceably lined. Collar and pockets trimmed with rich plush. All around self material belt. Convertible collar. Sizes 2 to 6. Order by No. 53E1744. Send no money. Pay $2.98 and postage on arrival. Money back if not satisfied. State size wanted.

Hip Boots Bargain

Don't fail to make this big saving on men's pure gum hip boots: friction lined; heavy corrugated sole and heel; guaranteed first quality. Made of the very best rubber. Usually retailed at $5. Be sure to order your pair while this great saving offer lasts. Sizes 6 to 14. Wide widths. No half sizes.



$2.49

Give Size.

Order by No. 53A949. Send no money. Pay $2.49 and postage on arrival. State size wanted. Order similar style in knee boot, sizes 7 to 12, by No. 53A950. Send no money. Pay $2.49 and postage on arrival.

Women's Fine Coltskin Dress Shoe

$2.98

Give Size

Rich dark brown or black coltskin shoe for dress wear. Uppers are very pliable but exceptionally durable. Genuine oak leather soles; medium height rubber heels. Fancy perforated wing tips, dressy, up-to-date last. Sizes 2½ to 8. Wide widths. **Order black by No. 53A172. Order brown by No. 53A173. Send no money. Pay $2.98 and postage on arrival. Money back if not satisfied.**

Black or Brown Kid Oxford

$2.79

Women's black or brown kid oxford in dressy last with medium heels with rubber top lift. Genuine oak leather soles. Fancy perforated inverted wing tip with perforated vamp. Beautiful model of selected soft kid leather. Sizes 2½ to 8. Wide widths. **Order black by No. 53A193. Order brown by No. 53A194. Send no money. Pay $2.79 and postage on arrival. Money back if not satisfied. State size.**

Cowlitz Cheese Association Meets at Toledo

Authorizes Directors to Contract With United Dairy Association for Marketing Its Products for One Year.

Authorizing the directors to enter into a contract with the United Dairy Associations of Washington for the marketing of its product for one year was the big thing of the annual meeting of the Cowlitz Valley Cheese association, at its annual meeting at Toledo, Wash., February 13.

Outside of this important step, however, the meeting was a most satisfactory one in every way. The attendance was large, interest in all the proceedings was keen and the satisfactory hot lunch prepared by wives of the members helped to make the day pass pleasantly.

Mr. Cleaver, secretary and manager, after reading the minutes, discussed the question of the merger with the united dairy associations. He called attention to the fact that expenses are too high because of the small amount of winter milk. While he urged more winter cows, he said the overhead is slightly under 2 per cent, while most cooperative factories run at a cost of about 3 per cent and most privately owned plants at about 5. In summing up the year's work Mr. Cleaver showed that 2,450,105 pounds of milk had been received, which contained 101,460.9 pounds of butterfat. From this 254,163 pounds of cheese were made. This in an average of 10.37 pounds of cheese per 100 pounds of milk. The average price for cheese was 21.1 cents per pound and the average price for butterfat, 46.5 cents. Patrons delivering milk received $47,-177.35.

G. W. Greece was elected a director for the lower river district and Elmer Boone for the Toledo district. As Mr. Cleaver positively declared he could not accept the position of secretary and manager again the board of directors recommended that P. G. Packard, the cheese maker, hold both positions, and before the day was over his appointment was confirmed.

Upon reassembling J. A. Scollard, president of the United Dairy Associations, addressed the meeting on the subject of making an agreement to handle their product. He called attention to the fact that the associations have just passed through a successful year in spite of all the bad conditions prevailing. He thought this shows some business judgment. Their business amounted to $5,500,000 and the money was invariably back in the 30-day period. In securing private capital to handle and sell their product, he said, they no doubt saved their organization. He gave details of the cheese making in several plants, all under the Darigold brand. Greater concentration of sales, he said, means cheaper selling cost and the elimination of competition. He showed how this association and the United associations had come in competition to some extent the last year.

Mr. Scollard believed the ideal plan would be for this association to belong to the United associations, but he was willing to take over the selling for one year on the same terms as the five-year contracts of the regular members.

A number of questions were asked and the chairman then asked Horace Addis of THE FARMER staff to tell of the Tillamook association and its methods. He asserted that the Tillamook cooperative factories began having one selling agency before they had any kind of an association; that they were fortunate enough to get Carl Haberlach, who used good judgment from the start, and soon was selling for practically all the factories. Later they organized to standardize their product. Their success was predicted on the fact that they had a practical cooperative selling agency. He told of the high prices received and of the fact that Tillamook is doing more advertising than ever before.

A motion was then made and, after some discussion, unanimously passed that the Cowlitz Valley Cheese association enter into a contract with the United Dairy Associations of Washington for one year for the marketing of their product, if it can be done to the satisfaction of the directors.

R. G. Fowler, county agriculturist, whose subject was "Better Bulls," showed why it pays to have the cows freshen in the fall. The cow will give a good flow of milk through the winter, if cared for, and will flush up in the spring, practically making two freshenings in the year. He gave statistics from Humboldt county, Cal., where 42 daughters of purebred sires gave an average production of 420 pounds of fat in a year, while the same number of daughters of scrub sires averaged only 106 pounds. The tremendous difference in profits were also shown by charts.

F. L. Audrain, state leader of boys' and girls' clubs, said the place to plant an idea is in the minds of boys and girls. He wanted them trained so they will be better farmers than their parents and gave instances of what had been done.

C. L. Woodrum, field secretary of the Lewis county farm bureau, told of a series of farm conferences that will be held and of the subjects that will be discussed. He declared there is great need of elimination of competition between cooperative associations.

N. C. Sears told of his experience in dairying with poor cows and of the good results he is now having with purebred Jerseys. In 1914, with scrubs, he had a herd average of 19.5 pounds of fat per cow in a month. In December last, with purebreds, he had an average of 42.5 pounds, and most of them heifers. He urged betters sires.

Before adjournment it was decided to hold the June cheese carnival as usual, and a rising vote of thanks was given the retiring manager, Mr. Clearver.

PUREBRED DAIRY SIRES PLACED.

As a direct result of the purebred sire movement, five purebred dairy sires were placed in San Juan county during the month. Another sire was also placed, but arrangements had been made for his purchase before the campaign. The dams of all these sires except one, reports County Agent Will Henry, have butterfat records of not less than 500 pounds, while the exception has a record of over 800 pounds.

Exide
BATTERIES

Every Time
You Telephone

When you telephone, the electric current that carries your voice over the wire is supplied by a storage battery. The Bell Telephone and most other telephone systems rely on Exide Batteries.

Huge Exides are used for reserve power in nearly all the central lighting stations of our great cities. Exides run locomotives used in the mines; they propel street vehicles and submarines; they operate railroad signals and drawbridges. In scores of ways Exide Batteries assist in America's commercial supremacy.

In the farm homes of the nation, a great majority of all the electric light and power plants are equipped with rugged Exide Batteries. And into every Exide is built the experience of the world's oldest and largest manufacturers of storage batteries for every purpose.

The Exide made for your automobile has earned the reputation of *the long-life battery*. It gives uninterrupted service for so long that you will find it an economy as well as a constant convenience.

Do not take a substitute for the Exide—there isn't any.

Spraying to Control Orchard Pests and Diseases

By F. E. BAILEY, District Horticultural Inspector

Spraying for the control of orchard pests and diseases is one of the largest factors in the production of a commercial fruit crop, considered both from the standpoint of the labor involved and of the material and equipment required. Furthermore, it is a subject to which every orchardist must give considerable study as it applies to his own local conditions. It is not the intent of this article to go into great detail on any one phase of spraying operations, but rather to point out the essentials to clean fruit production in eastern Washington during the year 1922.

First it is necessary to have a spray machine capable of maintaining high pressure with the ordinary nozzle equipment; a pressure of 200 pounds or higher should be maintained.

Whether the rod or the spray gun is used as nozzle equipment is largely for the choice of the individual operator, since it has been demonstrated that equally efficient work can be done with either. The gun throws a larger stream of spray and permits of covering free surface more rapidly, but it also requires that the operator be alert every second of the time and constantly adjust the spread of the spray stream to the distance and area of the surface to be sprayed. The rod with the Clipper or Bordeaux nozzles throws a smaller spray stream over a lesser range, and requires a somewhat longer time to cover the same tree area. In the hands of the indifferent or inefficient operator the rod will probably give better results than the gun because the nozzle adjustment of the rod remains unchanged during spraying operations.

Whatever type of nozzle is used the desired result is that the spray liquid between the time it leaves the nozzle and reaches the tree surface shall be broken into particles so fine as to form a mist which will evenly and thoroughly coat all parts of the tree surface. The fine droplets wet the surface evenly with the least drip-off; larger drops do not cover the surface as thoroughly and they have a greater tendency to run together and run off the surface. High pressure and proper nozzle adjustment to that pressure are the requisites to a good mist spray application.

Every effort should be made to wet all parts of the tree, especially the most accessible parts. It is poor economy to hasten the spray application for the sake of economizing on material.

If the trees are old with the dead outer bark, rough, cracked and sloughing off, it will insure better control for such insects as scale if the loose bark on the trunk and lower parts of the branches be scraped off prior to spraying.

Proper pruning of a tree is a necessary preliminary operation to all spraying. Thinning of the fruit is essential to efficient control by spraying of the codling moth.

The accompanying table states briefly the proper solution and time of spraying for some of the more common orchard troubles found in eastern and central Washington. These recommendations are general and it may be that local climatic conditions in some sections will demand a variation from the method offered here; in a case of this kind or whenever there is doubt regarding any detail of test or disease control consult your county agent, horticultural inspector or other recognized authority. Sometimes it is necessary to vary spraying methods considerably within a range of a few miles.

Orchard insects may be divided into two general classes:

First—Sucking insects, including all of the scales, aphides and mites. This class of insects obtain their sustenance by sucking the sap from within the living tissue of the plant, usually by means of a tubular mouth part adapted to this purpose. Taking no food from the exterior surface of the plant, leaf or fruit, these insects can only be controlled by a spray which wets their body surface. Such a spray is known as a "contact spray."

Second—Biting insects, of which the codling moth of the apple and pear is the most typical example. Biting or chewing insects have mouth parts adapted to their method of feeding. With a few exceptions they are best controlled by a stomach or internal poison sprayed on the surface where they feed. Such a spray is known as a "stomach poison spray."

Orchard diseases may be divided into three general classes:

First—Fungous diseases, such as apple scab, powdery mildew and peach-leaf curl. A fungus is a microscopic plant living on another plant. Fungous diseases can be controlled by spraying affected plants with a class of sprays known as "fungicides." All fungicides are contact sprays in that they must wet the diseased area in order to effect control.

Second—Bacterial diseases such as fire blight and crown gall. Very few bacterial diseases are controlled by spraying. Surgical removal of fire blight-infected areas and guarding against planting of gall-infected nursery stock are typical examples of control methods for bacterial diseases.

Third—Nonparasitic diseases such as Baldwin spot, rosette, winter injury, Jonathan spot and many others. Spraying operations are useless in the case of any of this class of diseases; attention must be turned to cultivation and irrigation practices and soil fertility improvement for their correction and prevention.

Of the more commonly used spraying materials, lime-sulphur solution serves the greatest number of purposes, being a contact spray for the control of many sucking insects and a fungicide for the control of fungous diseases. While commercial manufacturers aim to produce a solution with a relatively high specific gravity of Baume test, good home-prepared solution of lower test gives equally efficient results, but a correspondingly increased amount per tank should be used.

Oil emulsions of different types are used as insect destroyers (insecticides) and insect egg-destroyers (ovicides). An oil emulsion is oil broken up into very fine particles and held in suspension throughout a volume of water by means of an emulsifier (usually some chemical of a soap nature). For winter or dormant use, crude or other heavy oils are used, and in the emulsified form are known as "miscible oils." For summer use emulsions of distillate and kerosene are used.

While it is possible to prepare oil emulsions of different types at home, it is usually better to purchase one of the prepared emulsions (even though the cost be more) and use it as directed by the manufacturer. Oil emulsion sprays which show free or unemulsified oil floating on the surface of the spray tank should never be used, because free oil will kill the trees. Neither should an oil spray be used when there is a possibility of freezing weather following soon.

Arsenate of lead is the most generally used stomach poison for fruit tree sprays. In recent years the powdered form has practically displaced the paste form. The many commercial brands of arsenate of lead on the Washington market today are the most thoroughly standardized of all the spray materials used in this state. One brand varies but little from another as to killing power. This cannot be said so readily of commercial oil emulsions and lime-sulphur solutions.

Nicotine sulphate is a contact insecticide of value for aphis and other pest control. It should never be used except in combination with some caustic and penetrating agent, such as soap, fresh slaked lime, oil emulsion or lime sulphur solution.

General Spray Recommendations for Eastern and Central Washington

WHAT FOR	WITH	WHEN
Codling Moth	Lead Arsenate— 2 lbs. powder or 4 lbs. paste } 100 Gals. Water	First, when petals are falling (calyx spray). Second, just before first brood worms hatch. Third, 10 days or two weeks after second spray. Fourth, just before second brood worms hatch. Fifth, 10 to 20 days after fourth spray. Use codling moth cage, banded trees and thermometer to determine brood hatchings or consult horticultural inspector or county agent.
Scale—San Jose Oyster Shell Other Types	Lime Sulphur (32 degrees Baume) Solution— 10 gals. to 100 gals. of water or Miscible Oil— 8 gals. to 100 gals. water	While trees are dormant.
Aphis—Green Rosy Cherry Woolly—Aerial Form Root Form	Nicotine Sulphate (40%) ¾-pint— and 2 lbs. fresh lime or 2 lbs. soap } 100 Gals. Water Distillate Oil Emulsion 1½ gals— and Nicotine Sulphate ¼-pint } 100 Gals. Water Expose roots and apply above solution. For all types of aphis release Lady Bird Beetles (if supply is available) only when aphis are present.	As soon as discovered. When discovered. Band trees with tanglefoot in spring.
Fruit Tree Leaf-Roller	Miscible Oil— 8 gals. to 100 gals. water Followed by Lead Arsenate— 4-6 lbs. powder to 100 gals. water—one, two or three applications.	In spring while trees are still dormant. First, when bud clusters begin to show pink (pink spray). Second, when petals begin to fall (calyx spray). Third, at time of first spray for first brood codling moth.
Bud Moth Canker Worm Other Leaf-Eating Insects	Lead Arsenate— 2 lbs. powder or 4 lbs. paste } 100 Gals. Water	When insects are discovered.
Scab—Apple and Pear	Lime Sulphur Solution (32 degrees Baume). First application— 4 gals. to 100 gals. water. Second and later applications— 3 gals. to 100 gals. water.	First, when bud clusters begin to show pink (pink spray). Second, when petals begin to fall (calyx spray). Later, at intervals of 15 days, depending on the weather.
Blister Mite Peach Leaf Curl Peach Twig Borer	Lime Sulphur Solution (32 degrees Baume)— 9 gals. to 100 gals. water.	In spring before buds start.
Powdery Mildew Remove all mildew infected twigs during the winter pruning	First application— Lime sulphur solution (32 degrees Baume). 2 gals. to 100 gals. water. Second application— Same material as first. Third application— Ammoniacal copper carbonate.	Before blossoms open (pink spray). As petals fall (calyx spray). Three or four weeks after second application.
Fire Blight	No spray effective. Remove holdover cankers and diseased wood. Cut 18 inches below infection. Burn prunings.	Disinfect pruning wounds with solution of 1 gram cyanide of mercury to 500 grams water.

In an early issue a discussion of the control of the leaf roller by H. E. Newman, Spokane county horticultural inspector, in charge of pest control investigation, will be given in THE FARMER.

Yakima Hop Growers Meet

Hop growers of the Yakima valley met in conference at Yakima at the suggestion of H. L. Hull, president of the Yakima farm bureau, and effected an organization that will work through the farm bureau for the development of that industry. About 30 growers were present. A summary of the results is shown in the appointment of two committees. One of these is to study the problems of growing hops and preparing them for market and the other is to study marketing conditions. Any suggestions members of these committees may see fit to make will be considered at a further conference which may be called at the will of the chairman, Andrew Slavin, who is also to appoint the committees.

"We consider hop growing one of the stable industries of the valley," said Mr. Hull commenting on the movement to bring growers together, and we want to offer the machinery of the farm bureau organization to hop growers to help them solve their problems. What these problems are is for them to determine. They are in the business and know its needs The farm bureau in studying all phases of the marketing may be in a position to be of valuable assistance to growers. This is the service we stand ready to give the industry."

Issues Potato Quarantine

In order to prevent the potato eelworm and potato tuber moth from entering the state of Washington from the state of California a new quarantine order has been issued by E. L. French, director of agriculture. Both of these pests have been found to be very destructive to potato crops and the department is determined to guard against its getting a foothold in this state.

The quarantine prohibits the entry into Washington of all potatoes from the state of California or that may have been in the state of California except as under such conditions as listed in the quarantine order, as follows: Each shipment must be accompanied by a certificate, signed by an authorized inspector in the state of California, stating that he has inspected the field in which the potatoes were grown and found it to be free from the potato eelworm and from the potato tuber moth. He must also state that he has made an inspection of the potatoes when ready for shipment and found them free from any infestation of any stage in the development of the pests. This certificate must be attached to the bill of lading accompanying the car.

Would Throttle Vote of Farming Counties in Legislature.

If the farmers of Washington ever get an opportunity to swat a certain initiative measure that was filed with the secretary of state at Olympia last week, they will hit it hard. It is a proposed act brought forward by State Senator Palmer of King county to redistrict the state into 21 senatorial districts and 63 single representative districts. It would cut the senate membership from 42 to 21 and the house from 97 to 63, and would put control of the legislature in the hands of the politicians of two or three large counties.

King county, for instance, which means Seattle, would have 18 of the 63 representatives. Its representation in the house would exactly equal the combined representation of the following 24 counties: Adams, Grant, Douglas, Okanogan, Asotin, Garfield, Whitman, Benton, Klickitat, Skamania, Chelan, Clarke, Columbia, Franklin, Walla Walla, Pacific, Wahkiakum, Cowlitz, Kitsap, Lincoln, Ferry, Stevens, Thurston and Yakima.

The three counties of King, Pierce and Spokane, which take in the three large cities of the state, Seattle, Tacoma and Spokane, would have 30 members in the house, very nearly half of the total membership, and would have 10 of the 21 state senators.

Seattle and King county, with nearly one-third of the total membership of the house and the senate, would be in a position to trade for a little outside support and seize control of the law-making of this state and the appropriation of the millions collected from the people in taxes.

The inevitable effect of this bill, if it were adopted at the polls, would be to weaken the influence of the agricultural districts of the state and intensify the power of the great cities, particularly of Seattle.

From time to time The Washington Farmer will keep its readers informed of the manipulations that are back of this iniquitous measure and will point out the throttling effects it would have upon the rights and interests of the agricultural communities.

What School Lunch Does

Hot lunches have been tried in 36 country schools in Pierce county, according to Miss Elmina White, county home demonstration leader.

The children are required to spend 20 minutes eating their lunch and it has been found that they are eating all that they bring instead of throwing half of it away as they are tempted to do when they can hurry out and play in the school yard.

The janitor of one of these schools says he now finds only a half can of garbage where the children threw their lunch waste, when before the hot lunch was established there were two cans daily.

Eternal Vigilence the Price

That civilizations are never finished, that the struggles of democracy are eternal, was one of the things forcibly expressed by President E. O. Holland of the State College of Washington, in a stirring address at Spokane on Lincoln's birthday. Every freeman must be educated to take his place in the state. He must learn, in the words of Dr. Holland, to carry his own load; to obey the commandment, "Thou shalt not interfere with others' right"; and to cooperate with others toward worthy ends.

"In the magnificent Greek civilization, one freeman stood on the backs of nine slaves," said Dr. Holland. Within our own history was a time, he added, when men were educated only for the law, medicine or the ministry. Harvard, Yale, Michigan and Columbia, together, had fewer students than various single high schools within our larger northwestern cities number today. Now, there are courses in social sciences available to high school boys and girls that were undreamed of by the university man of other days.

University education is being extended within the reach of the hundreds of thousands, in rural communities as well as in the cities.

It is to Abraham Lincoln, who signed the Morrill bill, that we owe the liberal practical education of the industrial classes. Until the hour when he wrote across that bill, "I approve," education had followed classic lines along which it was molded in the days of Greece—the days when one freeman stood on the back of nine slaves. Without liberal industrial education of today, as President Holland pointed out, our great bridges, our enormous turbines, our astonishing advance in the use of electricity, our forward strides in scientific agriculture, would be unheard of.

We Should Be Grateful

Some time when the state authorities or federal government announce a quarantine on some of our products, or on something that we want to ship into the state for our personal profit, we feel a bit inclined to complain. The fact about it is that we should be grateful for quarantine regulations of this kind and should lend our aid in their rigid enforcement.

It may be a quarantine against alfalfa from districts infested with weevil, against sheep that have scab or other disease, against potatoes from a territory afflicted with the tuber moth, or against any other pest or disease that may be communicated from one infected district to another.

If the authorities were lax in quarantine orders and their enforcement and allowed the industry in our locality to become ruined as a result, we should have a just complaint against them. They have a just complaint against every producer who obstructs rather than assists in the carrying out of these regulations.

A Belated New Year's Pledge

—Washington Evening Star.

State Farm News

The Grays Harbor county commissioners have awarded the contract for the construction of seven 50 and 60-foot Howe truss bridges and one trestle bridge 80 feet long to the Pacific Construction company of Aberdeen for $12,609.19. The contract for the construction of one-half mile of plank roadway across the sands near Westport went to the Western Construction company for $2245. Charles Ewart of Hoquiam was awarded the contract for the construction and graveling of about two and one-half miles of the Westport Junction-Markham road on his bid of $12,670.

Ninety-five cows out of 480 tested in the Clallam county cow testing association made over 40 pounds of butterfat during the month of January. Ben H. Ridgway's herd of 19 cows made the highest average of 46.74 pounds butterfat.

* * *

Nine cars of certified seed potatoes of the Burbank and other varieties recently were shipped from the potato farm of Carles H. Greely at Pioneer, near Ridgefield, to Watsonville, Cal. The ranch has an extensive certified seed potato department in connection and is the home of the certified seed potato in Clarke county.

* * *

The Snake river district of Asotin, Garfield and Whitman counties produced 724 carloads of prunes and plums, 55 carloads of peaches, 12 cars of pears, 72 of cherries and 42 of apples last year.

* * *

An American cheddar cheese weighing 153 1-2 pounds, representing the cheese content of 1500 pounds of milk, was on exhibition in Mount Vernon recently.

Herman Stutzman, cheesemaker at the Burlington plant of the Skagit County Dairymen's association, where the cheese was made, christened it "Skagitonia."

* * *

Six dairy feeding schools have been held in Grays Harbor county by Extension Dairy Specialist Don G. Magruder One hundred and forty-four dairymen attended.

* * *

The Naselle calf club of Pacific county was organized with 11 members. Nine of these are to have grade or purebred Jerseys. The following officers were elected: President, Francis O'Connor; vice president, Oscar Nasi; secretary, Tauno Wiitala. County Agent J. R. Beck perfected the organization.

* * *

Mrs. Earl Sprago of Puyallup was elected president of the Pierce County Honey Producers' association at its annual meeting held recently. Other officers are L. M. Prosser, vice president, and Mrs. J. M. Black of Tacoma, secretary-treasurer.

* * *

The dairy and live stock division of the state department of agriculture has begun the testing for tuberculosis in Thurston county where they expect to examine 3000 animals. An application for the testing of 10,000 head has been filed for Whatcom county.

* * *

E. B. Arthaud of Hoquiam was elected president of the Grays Harbor Development council. He has named six projects to be worked upon as follows: Tax regulation, cheap and steady power, more industries, reforestation, agricultural development, and port and commerce development. The committee of the council for agriculture is W. C. Mumaw, Aberdeen, chairman; Oscar Blechschmidt, Elma; Lloyd C. Pickering, Montesano, secretary.

* * *

Andrew Slavin of the Moxee district was elected to head a committee to study hop growing and the preparation of hops for the market, with a view to putting authoritative information in the hands of the Moxee growers. In the past years buyers have paid a bit under the ruling market price at times on the plea the Moxee hops were not up to the standard in preparation, and the growers intend to forestall such action in the future. Adolph Fontaine was named head of a like committee to make a special study of marketing.

Coming Events of Interest

Feb. 23—Day & Rothrock Shorthorn sale, Sprague.
Feb. 24—A. D. Dunn Shorthorn sale, Wapato.
Feb. 24, 25, 26 and 27—Poultry extension meetings at Vancouver, Camas, LaCenter and Winlock, respectively.
March 4—Pioneer reunion, Bucoda.
March 7—Holstein-Friesian Ass'n meet, Seattle.
Mar. 8—F. Sinnes Berkshire sale, Prosser.
March 9—Stevens county live stock sale, Chewelah.
March 9—Stevens county live stock sale, Chewelah.
Mar. 22—Shorthorn consignment sale, Portland.
April 5—Pierce county poultry meet.
April 16—Easter.
June 7-9—Union live stock show, Union, Ore.
July 27-28—Whatcom co. Guernsey gallop, Bellingham.

FARM BUSINESS AND MARKETS OUTLOOK

KEEP AN EYE ON THE MARKET

A western sheep speculator is said to have made a million and a half dollars in the last few weeks, recovering a fortune lost during the period of deflation. Other operators have made huge sums as they have been able to pick up bands here and there from owners who were uninformed as to the extremity of the advance in sheep and lamb prices.

Of course, the speculator assumed risk of a decline in the market before the shipments arrived and would aim to buy on a safe margin anyway, but this factor does not explain some of the extremely wide margins it has been possible to obtain.

The speculator thrives through knowing more of market prices and market conditions than those with whom he deals so that he can take advantage of them. The lack of standardization in market classes and grades of live stock makes the close comparison of different markets a difficult matter and thus plays into the speculator's hands.

The producer who visits the central market but once, or at most only a few times a year, is at a disadvantage in appraising his own stuff by examining market quotations. He needs to study market news at all times to get the "feel" of the market and learn to read between the lines, but especially when prices are advancing he must watch carefully lest he be caught unawares.

LIVE STOCK ESTIMATES REVISED.

Whole hearted revision of the live stock estimates of the department of agriculture to align them with the findings of the census bureau resulted in slashing over 12,000,000 head from the estimate upon hogs, 8,000,000 head from the sheep and 1,000,000 head from the estimated horse population. The estimate upon the total number of cattle was but little affected, as it was already in substantial agreement with the census. The estimated number of mules was increased nearly 400,000 head.

The department's revised estimates as of January 1 for the last three years are as follows:

Swine—1922	56,996,000	Other cattle—1922	41,324,000
1921	56,097,000	1921	41,993,000
1920	59,344,000	1920	43,398,000
Sheep—1922	36,048,000	Mules—1922	5,436,000
1921	37,452,000	1921	5,455,000
1920	39,025,000	1920	5,427,000
Milk cows—1922	24,028,000	Horses—1922	19,099,000
1921	23,594,000	1921	19,208,000
1920	23,772,000	1920	19,766,000

The largest change in any class compared with a year ago is a reduction of 4 per cent in the sheep population.

Profitable prices for hogs and dairy products apparently have stimulated effort in those fields, as the number of milk cows reported is 1.8 per cent higher and of hogs 1.6 per cent higher than on January 1, 1921. The number of horses and mules and other cattle all are slightly smaller than a year ago.

The number of horses on January 1, 1922, was the smallest since 1906 and the number of milk cows the largest ever reported. The number of sheep the smallest since the census of June 1, 1890, and the smallest reported by the department of agriculture since 1878. The number of other cattle was the smallest since 1916, but 15 per cent larger than at the time of the last cattle shortage in 1914.

CATTLE RECEIPTS INCREASE

During January receipts of cattle at the leading markets ran considerably behind the average for that month, but since the first of February the movement has been slightly greater than the average for the last seven years. Nevertheless, the market has begun to show greater activity.

Price advances made slight headway during the last week. Cattle feeders took a larger share of the receipts and a small amount of buying for export occurred at Chicago. Steers with weight are more popular, although no prime yearlings are arriving to test out the market for light cattle.

Cows nad heifers have advanced more than steers. Only a light supply of grass beef from Texas is expected during the spring months so that the seasonal upturn in butcher stock prices promises to come to pass on schedule time.

FEEDER MOVEMENT EXPANDS.

The movement of stocker and feeder cattle has increased recently and is larger than usual at this season of the year.

Interest in breeding cows is on the increase and the tone of the entire cattle industry has improved in the last two or three months. No wild furor over stock cattle is likely during the spring, but it is doubtful if values will sag much lower at any time in the next four months, and the general trend is likely to be upward until the spring demand is satisfied.

ADVANCE DOES NOT ATTRACT HOGS.

In spite of the advance in hog prices beyond the $10 line at Chicago receipts have not increased. Evidence is growing that the supply remaining to be marketed is not excessive. Since the first of February receipts at the seven leading markets have run nearly 20 per cent below the average for the corresponding period in recent years. Prices have reached the highest level in more than six months and the market is slightly top-heavy, but until receipts enlarge sufficiently to place the advantage in buyers' hands, present prices will be maintained.

Domestic demand shows sustained breadth and clearances for export are large. A big order for special cuts from light hogs is said to have stimulated the market in the last few days.

LAMB SCARCITY CONTINUES.

Although receipts of lambs at the seven leading markets in the last 10 days have been only about 12 per cent less than in the corresponding period of 1921, the supply has been considerably below the requirements of the trade and prices have advanced almost without interruption. In both the hog and lamb markets present quotations are materially above any believed possible three months ago and higher prices have not increased the movement to market perceptibly. That still higher lamb prices will be seen is not improbable, although the advance seems to be approaching its limit.

FARM CHUNK EXPANDING.

Trade in farm chunks is gathering volume, although limited in many cases because farmers are obliged to buy on credit. The number of horses passing through central markets has practically doubled in the last two months.

WOOL DEMAND SLACK.

Demand for wool in the principal markets subsided last week on the part of both manufacturers and dealers. Mill operations are said to have decreased slightly and the demand for goods with some exceptions, has not been entirely satisfactory. A belief is spreading that the advance has about exhausted its momentum.

In the range country contracting of the new clip is active and prices have scored further advances. Purchases have been largely for speculation. A great many wools have been bought at a range of 28 to 32 cents and a bid of 36 1-8 cents was refused for the Jericho, Utah, wool pool for which 16 7-8 cents was the initial bid a year ago.

The Boston market is quoted as follows:

Oregon—Eastern No. 1 staple, $1.10@1.12; fine and fine medium clothing, 88@92c; fine and fine medium French clothing, $1@1.05.

WHEAT SITUATION TIGHTENS

The world's statistical position so far as wheat is concerned continues to grow tighter. The official Argentine crop estimate has been reduced to 155,000,000 bushels, or 15,000,000 bushels less than last year and 16,000,000 bushels less than the five-year average. This change indicates an exportable surplus of around 100,000,000 bushels old and new crop from that country. With this revision, world's surpluses for the crop year 1921-1922 are practically balanced by probable requirements of importing countries.

Millers in the United kingdom have bought freely of Argentine and Australian wheat and are said to have contracted all of the grain due to arrive at United kingdom ports during the next five weeks. Argentine and Liverpool prices have advanced faster than those in this country with Liverpool nearly 25 cents higher than at the beginning of the month.

SOUTHWESTERN DROUGHT UNBROKEN.

It is still too early to estimate the severity of damage from dry weather in the southwest but there has been but little relief thus far and every day without rain or snow heightens the critical condition of the crop.

With a bullish statistical situation and prospects of a small winter wheat crop, the market promises to be influenced very strongly by the character of the weather in the southwest, but even with the most favorable conditions it is doubtful if the highest prices of the season have been seen.

The flour trade in this country finally improved after the wheat market revealed its strength, but milling demand has not been sufficient to advance prices for cash wheat as rapidly as for future delivery.

CORN HIGHEST IN MONTHS.

Although the quantity of corn arriving at terminal markets is far above the average for this season of the year, the advance in wheat prices coupled with a broad demand for corn has advanced corn prices to the highest level in several months.

The oats market is following other grains and has not yet shown any independent strength. Farm reserves are believed to be unusually small. Receipts at primary markets, however, continue large and the visible supply at terminals is around 68,000,000 bushels. The total disappearance of oats from primary markets during the first half of the crop year was only 91,445,000 bushels. Conditions are shaping up to favor an increase in the rate of disappearance and a more rapid reduction in the visible supply during the spring months. The Canadian crop estimate was reduced recently and the Argentine crop is now estimated at only 32,000,000 bushels compared with a five-year average of 53,000,000 bushels.

The cash grain prices for week ending February 15 were:

Chicago wheat—No. 2 red, $1.36 1-4; No. 3, $1.27@1.34 1-2; No. 4, $1.23@1.32 1-4; No. 2 hard, $1.25 3-4@1.34; No. 3, $1.24@1.31; No. 4, $1.28

Corn—No 2 mixed, 52 1-2@56 1-4c; No. 3, 51 1-4@55 1-2c; No. 4, 49 3-4@53 1-2c; No. 2 yellow, 52 1-2@57c; No. 3, 51 1-4@56c; No. 4, 49 1-2@54c; No. 2 white, 52 1-2@57c; No. 3, 51 1-4@55 1-2c. Oats—No. 2 white, 38@41c; No. 3, 35@39c; No. 4, 34@37c. Rye—93c@$1.02. Barley—54@66c.

HIGHER PRICES FOR CLOVERSEED.

Clover seed prices reached a new high level last week. Offerings are light and there is a fair demand, although it is believed that buying by farmers will come later than usual. Statistically, the market is in a strong position. The price which farmers will be willing to pay is the chief limiting factor in further advances.

NEW HIGH ON WHEAT FEEDS.

Wheat feed prices recovered all of their recent loss and advanced into new high ground for the season, due in part to the advance in the wheat, corn and oats markets. Actual consuming demand is limited, as present prices make country buyers hesitate. Oil meal prices are practically unchanged.

Chicago—Bran, $26.50; standard middlings, $26.50; flour middlings, $28.50; hominy feed, $22; gluten feed, $31.65; cottonseed meal, 36 per cent, $40; 43 per cent, $44; tankage, $52.50@55; oil meal, $46.

HAY DEMAND LIMITED.

Except for alfalfa, demand for hay continues disappointing to producers and dealers, although spells of cold weather bring an occasional increase. Receipts of hay at Kansas City, the leading distributing market, since the first of the year, total only 2154 cars compared with 3287 cars in the same period last year, and 7786 cars in the same period two years ago. Michigan, Wisconsin and the Dakotas seem to be shorter on forage than other states.

Prices per ton in carlots were as follows:

Chicago—No. 1 timothy, $22@23; light clover mixed, $19@21; No. 2 timothy, $19@20; No. 1 threshed clover, $12@15; No. 1 to choice alfalfa, $23@25; Nebraska and South Dakota prairie, $12@16; rye straw, $13@14; oat straw, $11@12; wheat straw, $10@11.

EGG MARKET IN TRANSITIONAL STAGE.

The egg market is in a transitional stage as the spring increase in production is showing up in the southern sections, although receipts at the leading markets have not increased as much as they did at this season last year. The preliminary report on cold storage holdings in the United States on February 1 was 182,000 cases compared with 43,000 cases on the same date last year and a five-year average of 173,000 cases. The decrease in storage stocks during January was 704,000 cases compared with a five-year average of 809,000 cases.

BUTTER MARKES MIXED

Butter markets have presented a mixed appearance recently with eastern cities weak and Chicago disposed to advance. Receipts of fresh butter at New York increased notably with 1300 boxes of Australian butter received by rail from the west and about 5000 boxes more of Argentine butter due to arrive. Reports of a lighter make have not been borne out by market receipts, although at Chicago the supply was barely sufficient to satisfy requirements. Nevertheless, receipts at that market were in excess of the same week of 1921.

CHEESE SHORTAGE DEVELOPS.

Long continued buying on a hand to mouth basis eventually led to light stocks of cheese in retailers' hands and buyers were obliged to reenter the market last week and pay higher prices. Country markets advanced as much as 1 cent per pound. Chicago prices also were raised and eastern markets were firm.

Little Journeys to Market

BUSINESS CYCLES.

For two centuries our commercial history has been a series of "business cycles," each lasting from three to 20 years. A cycle is divided into two parts—a period of prosperity or expansion and a period of depression or reaction.

The two halves can be subdivided into two periods, each with its own characteristic features as follows:

I. Expansion.

1. Revival: Easy credit, low interests rates, rising prices for stocks and later for commodities, increasing employment.

2. Prosperity: High prices for commodities, strikes and advances in wages, increasing real estate prices, extreme prosperity, inefficiency and extravagance, declining bond prices.

II. Reaction.

3. Decline: Credit scarce, interest rates high, violent slump in commodity prices, numerous business failures, strikes against wage reductions.

4. Depressions: Hard times, trade dullness, unemployment, declining real estate prices, increasing thrift, rising bond prices.

Stability in our commercial and industrial affairs has never been obtained and it is safe to assume that these "tides in the affairs of men" will continue to flow for a long time to come. Not infrequently the government or the "money power" or some other influence is blamed for causing the period of depression, but it is the inevitable reaction from overdoing on the part of nearly everybody during the preceding period of prosperity. The attitude of powerful agencies, however, may soften the blow or make it more severe.

These periods are not distinctly divided, as all businesses are not affected by them at the same time in equal proportions, but few lines of endeavor go entirely unscathed.

The last period of prosperity or expansion reached its maximum in the latter part of 1919 and the first half of 1920. The subsequent decline occurred in the last half of 1920 and the first part of 1921. This was followed by a period of depression. Fortunately, we seem now to have emerged into the revival period which marks the start of a new cycle.

Farmers who are able to foresee these changes and act accordingly by saving money during the prosperity period and having as few debts as possible as the first half of the cycle draws to a close, should be ready to weather the "cyclone" which always follows.

Two Hog Sales

Durocs and Polands Are Dispersed

Two hog sales in the lower Yakima valley on successive days, that which dispersed most of W. A. May's herd of high-class Poland Chinas from his ranch near Toppenish February 8, and that which inaugurated a series of annual sales by the Yakima Valley Duroc Breeders' association, at the H. W. Turner ranch, near Sunnyside, February 9, resulted in the distribution of more than 70 head of purebreds at prices which farmers could afford to pay under almost any circumstances. Neither sale was largely attended and bidding was inclined to be sluggish.

A cold rain undoubtedly dampened the ardor of bidders at the May sale, which, under the persuasive tongue of Auctioneer George Gue and the inducement of owning high-class Poland Chinas, brought an average of $61.50 for 29 catalogued individuals. In addition a number of fall pigs were sold from $8 to $25 each. Baker & Paddison of Ahtanum paid $112.50, the top price, for Cedar Daisy D., an Iowa bred sow soon to farrow by Western Designer, May's herd sire. An especially nice individual, Daisy C., from another litter bred in Iowa, cost H. Van Wechel of Yakima $100, but litter mates in each case went considerable lower.

Only two boars were sold, Superintendent Roy P. Bean of the Prosser branch experiment station taking Western Designer for use by the state college at Pullman for $102.50 and Ray Wright of Ahtanum taking a fall boar by Pacific Flossmoor for $40. The former is an outstanding individual bred by C. K. Loe of Silverton, Ore.

The Duroc Sale.

When the Yakima Valley Duroc Breeders' association was formed two years ago, following the importation which was sold at the state fairgrounds, it was intended to hold a sale annually. Conditions last year seemed to justify postponing the first one, hence that of February 2 inaugurates the series. Everything appeared favorable for a somewhat higher average than was realized. The day was one of the first warm ones; the animals consigned represented some of the several breeders' best stock, carefully selected by C. M. Hubbard, live stock extension specialist at the state college, and the eight months' credit extended allowed time in some instances for the purchaser to procure two litters before paying for the dam. Auctioneer George Gochnour had to do considerable coaxing, however, to obtain an average of $44.50 for 29 head. As in the May sale, there were several instances of animals bringing only 25 to 30 per cent of what consignors paid for them during the period immediately after the war, but satisfaction was expressed in some quarters that prices are down again to where the average farmer can afford to buy hogs for joint use with dairy cattle.

An uncatalogued sow owned by Chester Murphy, a Sunnyside pig club boy, topped the consignment sale at $80, but Chester had to mount the block and do some auctioneering on his own account before bidders would go even that high. Later he offered I. F. Kneeland of Sunnyside $25 for choice of the coming litter. Kneeland was the purchaser also at $61 of Sensation Lady 4th, one of S. D. Cornell's best consignments. The latter, who paid $600 for the sow's dam, immediately bought her back at small premium.

The Poland Chinas.

Western Designer, Washington State college, $102.50.
Pioneer, Ray Wright, Ahtanum, $40.
Females—
Cedar Daisy C, L. J. Goodrich, Toppenish, $70.
Cedar Daisy D, Baker & Paddison, Ahtanum, $112.50.
Cedar Mastodon, E. V. Taylor, Selah, $55.
Cedar Mastodon A, H. H. Brons, R. F. D. 8, Yakima, $62.50.
Fox's Model, H. Van Wechel, R. 1, Yakima, $60.
Show Me 1st, E. M. Dorsey, Pasco, $67.50.
Best Ever Again 4th, L. J. Goodrich, $50.
Lady Mastodon, I. J. Oder, Yakima, $80.
Lady Mastodon A, George S. King, Mabton, $52.50.
Daisy C, H. Van Wechel, $100.
Daisy D, Gust Kanlos, Toppenish, $55.
Daisy E, H. H. Brons, $70.
Daisy M, A. B. Bartlett, Toppenish, $50.

Coglon to Leave Yakima

Yakima county is to lose its agricultural agent March 1, when R. B. Coglon, who has been there about a year, leaves to take the management of a 5000-acre stock and grain ranch near Lethbridge, Alberta, Canada. Coglon was county agent leader for the state before going to Yakima, where he has made an enviable record as an executive. The county farm bureau is the largest in the state and is functioning effectively; several "allied industries" are doing equally well, and altogether extension work in the county is in a highly satisfactory condition.

W. A. WALLACE, Pasco, Wash.—The Washington Farmer is surely a fine paper.

Apple Prices Are Up

The state of Washington and the Pacific northwest in general not only had a large crop of excellent apples last year, but the price has ruled generally satisfactory throughout the season, with a strong upturn during the last few weeks. An advance of from 25 to 50 cents a box has been noted recently.

Concerning the general apple situation, and especially the favorable position in which the growers of the Pacific northwest find themselves, C. F. Karkalits of the Earl Fruit company says: "The eastern crop last fall was short. We had an extraordinary crop in the northwest. There has been no shortage of apples, because the two crops have balanced each other. However, the eastern apples have been used up and the eastern trade is turning from their barrel packages to boxed apples from the northwest. This has resulted in unusually heavy orders for this section during the last two weeks. On top of this, it is a fact that while the Wenatchee district this season produced about 16,000 carloads of apples, 4000 cars more than the normal crop, all the producers took the precaution to move their apples as largely as possible before cold weather set in.

"The result has been that by January 1 about 65 per cent of the crop in this district had been shipped. Ordinarily not more than 55 per cent of the crop has been distributed by the first of the year. There has been, therefore, a slight shortage of apples to supply a larger than usual demand from this territory.

"Within the next six weeks the entire crop will have been cleaned up. Present quotations are expected to hold to the end of this season's market, with the possible exception of a few well-preserved cars of Winesaps, which may bring higher prices."

Ask Questions

This paper has on its staff and among its editorial contributors men and women qualified by their experience and training to answer every reasonable question that any of its readers desire to ask. Questions may deal with any of the problems that the farmer or members of his family face. It may be something that the housewife, the live stock man, the dairyman, the poultryman, the orchardist, the gardener or the general crop farmer wishes to know. From the sick animal to the gas engine that is in trouble, the experts that are at the service of our readers are able and ready to answer the inquiry.

There is only one condition placed upon those who ask questions. That is that the inquirer show his good faith by giving his name and post-office address. No question will be answered unless the name and address are given. Just the initials are not enough. To be sure, The Washington Farmer does not desire, except in special cases, to publish the name of an inquirer, but it is entitled to know and must know the identity of those writing.

Utility!

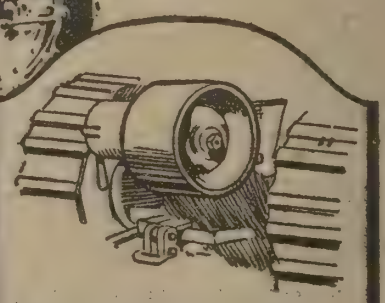
—all around usefulness a striking feature of

CATERPILLAR

T-35 Tractor

The small size—light weight—compact power—rugged strength and dependability of this machine adapt it for all power work—tractive and stationary.

If you farm a limited acreage, the T-35 Tractor will do all the work—plowing, harrowing, discing, leveling and other jobs. If you are a "big farmer" the T-35 Tractor will do the light jobs quickly and economically, in place of big tractors or horses. It is ideal for orchards, vineyards and berry fields—for road work, hauling and contracting.



Whatever your power needs, there is a size of "Caterpillar" Tractor to meet them. Write for full information.

THE HOLT MANUFACTURING CO.

Spokane, Wash.

Factories at Stockton, Calif. Peoria, Ill.

Oregon Representative, J. W. Hill, Henry Bldg., Portland.

For belt jobs

The belt pulley unit extends the usefulness of the T-35 Tractor. With it you can pump water, grind feed, saw wood and do other belt jobs easily and quickly. The belt pulley is an independent unit that bolts on rear end of the transmission case. It operates at 3000 feet per minute belt speed.

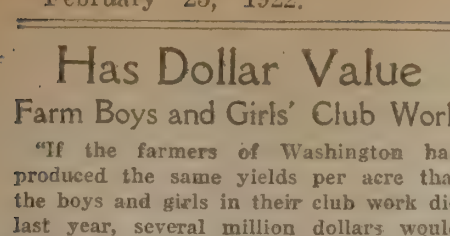
There's only one Caterpillar Holt builds it

Has Dollar Value

Farm Boys and Girls' Club Work

"If the farmers of Washington had produced the same yields per acre that the boys and girls in their club work did last year, several million dollars would have been added to the wealth of the state. On potatoes alone the boys outstripped the men by 23 bushels per acre, which yield, had it been produced on the 56,000 acres in crop, would have added $1,545,000 to the farmers' buying power."

This is the way that G. L. Noble of Chicago figures it out. Mr. Noble is secretary of the recently organized business men's national committee on boys and girls' club work and has been making a trip through the Pacific northwest. In an interview with THE FARMER representative Mr. Noble adds:



"These Washington boys and girls are demonstrating to their elders what can be done by improved methods advocated by the agricultural college—yet less than 10 per cent of the farm boys and girls of Washington are now being reached. The need is for more paid county club leadership and for increased support from the business and manufacturing interests.

The boys and girls' club work is an activity in which every business man is interested and should support, both from an immediate business standpoint as well as the maintaining of a high-class of citizenship on our farms to supply our manufacturers with raw products and a citizenship which will require good homes, supplied with modern conveniences, thereby furnishing a market for all products manufactured by the industries.

"A national committee on boys and girls' club work, composed of the leading businesss men of the nation and comprising representatives of the American Bankers' association, the American Farm Bureau federation and legislators, is active in increasing the scope of boys and girls' club work. In the United States there are 11,000,000 boys and girls on our farms, whereas only 350,000 are now doing club work and using the practices advocated by the agricultural colleges, the United States department of agriculture cooperating."

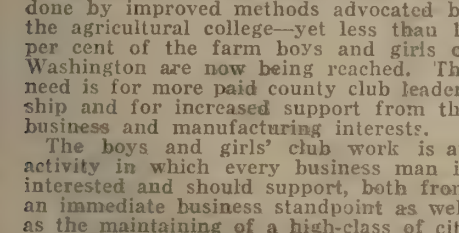
Spark Plug Points

By PROFESSOR L. J. SMITH, W. S. C.

Every one knows that if the points of a spark plug are too close together, or too far apart, one is apt to have a poor spark. Another point right along this line is not so clear, namely, the correct relation of the points to each other. There are two correct ways and one very poor way to set the points.

The figures "a" and "b" show proper methods. The points are "square at" each other in either case. In "c" the spark has to jump from the edge of one point to the edge of the other, and the proper spacing is not so easily maintained. In the last mentioned position, the spark fails because of dirt, usually a bit of carbon, sticking between the points, thus allowing the spark to "short circuit," that is, the electricity passes from one point to the other without jumping an air gap and, therefore, without making a spark to ignite the mixture of gasoline and air at the end of the compression stroke.

Study the illustration and avoid the "c" method.



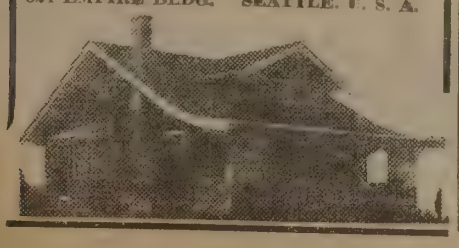
A Quarantine Order

A quarantine order has just been issued by E. L. French, director of agriculture for the state of Washington, which prohibits the shipping of filbert stock or cions into the state from the states of Montana, Colorado, Wyoming, New Mexico or any other state to the east of the above.

The order is placed to prevent the eastern filbert blight from entering the state. The disease has caused considerable damage to filbert trees in the eastern states, but as yet has not been found west of the Rocky mountains. It has caused injury that threatens the filbert industry in some districts, but the authorities in this state are determined that it shall not get a foothold on the Pacific coast, where the nut seems to have a very promising future.

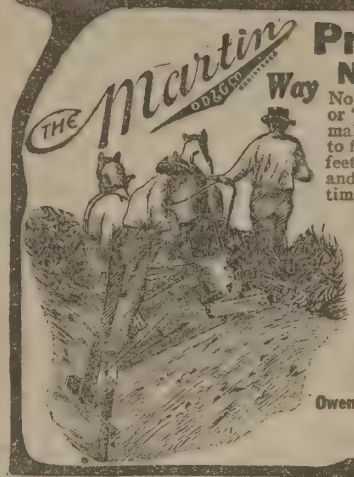
THE PUREBRED FLOCK.

For the present perhaps the greatest value of the purebred flock to the average farmer lies in the higher price obtainable when its members are sold as breeding stock.



Every Farmer Needs These New Building Books!

Just off the press! Two new art books on home building. CRAFTSMAN BUNGALOWS, 1922 Edition De Luxe, 112 pages of beautiful, distinctive homes costing from $800 to $8000 to build. Gives pictures of exteriors, interiors, floor plans, etc., with all necessary information. Will save many dollars for builders. Price $1 postpaid.



COLONIAL HOMES. Most original and complete book ever printed on this beautiful type of home. Only 50c postpaid.

Order both books today. Money back if dissatisfied.

POST CARDS BRING BIG RETURN

Many of our advertisers offer free booklets and information which is very much worth your while to send for. A postal will bring them. Why not place a dime or so in your rural mail box with a note requesting the carrier to leave you some cards? Then use the cards in writing advertisers. When you do so be sure to mention THE WASHINGTON FARMER.

You Can Expect Unusual Economy

The complete equipment of the new Superior Chevrolet is an evidence of the real economy you can rightly expect from this car. Not an extra dollar to spend. The Chevrolet is complete and modern to the minute.

Economy after the purchase price is assured. The new Superior Chevrolet gives far more than the unusual mileage from gasoline, oil and tires, and requires fewer parts replacements.

Twenty to thirty miles to the gallon of gasoline

$525 f.o.b. Flint.

Ask your Chevrolet dealer to explain the new features of the Superior Chevrolet—or write Dept. 132 for catalog and other information.

Shows Big Growth

Washington Cooperative Egg and Poultry Association

An increase of 236 per cent has been made in the shipment of cased eggs in 1921 over the number shipped in 1920 by the Washington Cooperative Egg and Poultry association as was brought out at their annual meeting at Seattle recently. There has also been practically a 100 per cent increase in the number of members over 1920, and they expect a 26 per cent increase in production of the average flocks.

The association, now two years old, has far exceeded its greatest expectations. The officers have had to use every means available to keep sufficient warehouse room.

During the year 1920 a total of 8560 cases was shipped by the members through the association, while in the past 12 months there were 200,287 cases marketed. A total of $2,460,453.59 was paid to members for their shipments of eggs and live poultry.

The association has established a grading system that has done much to help market the Washington eggs. General Manager J. M. Wells made a trip to New York to investigate marketing conditions. He recommended grades that will comply with the demands of the New York markets. Consequently the best eggs produced at home are sold as "Washington extras" and "Washington firsts" at New York markets, while all brown or discolored eggs are sold for the local trade.

Officers of the association for 1922 are: G. W. Holt, Auburn, president; W. H. North, Burlington, vice president; R. T. Hawley, Bellingham, secretary-treasurer, and J. H. Guffy, Langley, and F. C. McClane, Alderwood Manor, are additional members of the executive committee. Members of the board of directors are J. L. Snyder, Gig Harbor; C. L. Smith, Sunnyside; E. A. Hamilton, Kirkland; B. H. Vining, Marysville, and Carl Laakso, Winlock.

The organization has its headquarters and main plant at Seattle with branch houses at Bellingham, Lynden, Tacoma, Winlock and Yakima. The Yakima plant has just been established, but is now handling eggs from members in the Yakima valley.

Prize Pig Letters

As previously stated, Daniel I. Hopkins, St. John, was second prize winner in The Washington Farmer's recently closed prize pig contest. The letter of M. A. Hall, Rochester, who won the purebred gilt as first prize, has been published. The following is Mr. Hopkins' letter:

THE SECOND PRIZE LETTER.

I am located on a 600-acre rented wheat farm in the drier part of the Palouse country, where many of my neighbors think it unprofitable to keep hogs. Once I was of the same opinion, but during the last several years I have been following a system of hog management which I find profitable. I keep four or five brood sows (five at present) bred to farrow about April 1. During the fall and winter the sows are fed some wheat screenings and skimmed milk and allowed to pick up waste all over the farm. My poultry yards, house yard and garden are fenced pig tight and the hogs are allowed free range of the rest of the farm, including barnyard and cow-feeding shed. Some farmers, unless they naturally liked pigs, would object to this, but it is the only way to save the waste. Especially in the cow-feeding shed during the winter the sows get much of their living.

In the spring the sows and litters are allowed to pasture on the fall wheat, the sows being fed some middlings mixed in slop from the kitchen. In a pen into which the pigs may enter, but not the sows, the pigs are fed skimmed milk, into which has been mixed a little rolled wheat and rolled oats. If I were without the skimmed milk from my small dairy I should get and feed a small amount of tankage to balance the ration for the growing pigs.

Some time during May the sows are shut up in a small rye or wheat pasture, leaving the pigs to range at will. About the middle of June the pigs are weaned by being shut out of the sow pasture. I am of the opinion that pigs do not injure growing wheat until it begins to head. When the fall wheat has reached this stage the pigs are removed and placed on the summer fallow, where a strip of rye pasture and some field peas have been sown. (The cows have kept the rye pastured down.)

After the wheat is harvested the pigs and sows are put on the stubble. Also, the hogs have access to the orchard, where they clean up all windfall and waste fruit. Each year I raise some corn and potatoes in the gulches on the summer fallow. The corn is used to help fatten the pigs in the fall, while the fodder is fed to the cows. The small potatoes, undesirable for table use, are cooked and fed to the pigs.

Sometimes I market in December, but usually earlier, the pigs weighing from 175 to 200 pounds when sold. Good grade sows and a purebred sire are used. However, purebred sows also would be profitable. If any fall litters are raised the pigs are sold as soon as they can possibly be weaned, as I have not found it very profitable to feed pigs over winter. I plan to market from 25 to 40 hogs each fall. Better not raise too many, but rather take better care of the few you do raise. The number one should raise depends on the size of the farm and the available amount of waste and byproducts to be fed. With me the hogs are a by-product, as I can produce them without materially reducing the amount of grain sold from the farm each year, and in keeping them I utilize most waste and odd products that would otherwise be total loss.

DANIEL I. HOPKINS.

St. John, Wash.

The third prize letter, written by L. P. Powers, Palouse, will be published in an early issue.

Davis-Butchart Sale

Space limitations last week prevented the publication of the detailed report of the joint Holstein sale of H. C. Davis of Granger and Butchart Bros. of Sunnyside. The report of the animals sold, the buyers and the prices follows:

(Continued on the following page.)

200,000 Heat Stabs!

Each one aimed at the thin film of oil on the cylinder walls of your engine. How Veedol protects against this deadly heat.

Spark! Explosion! Heat!

Spark! Explosion! Heat!

That's the tune your six cylinder motor hums 200,000 times every hour you cover 25 miles on the road. You think only of the power explosions that drive your car steadily forward.

But what about the heat of those explosions—heat that hits the piston heads at 1000 degrees and averages 300—400 degrees on the cylinder walls? What protection have you against this deadly heat that makes most oils quickly evaporate, break down, lose their body and leave the costly metal of your car a prey to destructive friction?

1. You have a cooling system that circulates *outside* the moving parts of your engine. That helps, but you have little control over its operation.

2. Your only other protection is your lubricating oil which circulates *inside* your engine, and which must bear the brunt of the battle with heat. You have every control over that.

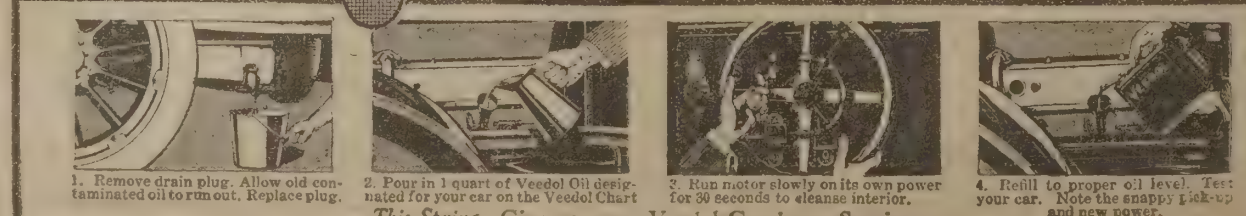
Veedol maintains that thin film of oil between the piston and the cylinder walls under extreme operating temperatures—and holds apart those flying metal surfaces whose contact means broken piston rings, scored cylinders and pistons.

Veedol is a Pennsylvania base oil and is refined under the Faulkner process. This exclusive Veedol process gives that *extra* heat resisting quality so necessary to the perfect lubrication of your car.

There are five Veedol Oils, each different in body, but all of one quality. Go to your dealer. Consult the Veedol Chart on his wall. Select the Veedol Oil designated for your car, your truck or your tractor. Use this oil and no other.

Let us send you a copy of our booklet, "Facts you should know about lubrication."

There are Veedol Greases and Trans-Gear Oil for the differential, transmission, cups and springs of the motor car, truck and tractor.



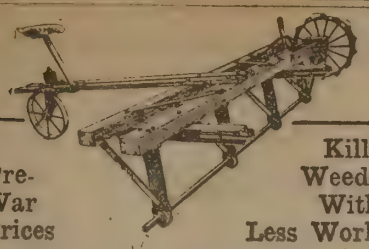
TIDE WATER OIL SALES CORPORATION, 11 Broadway, New York

Branches, warehouses, distributors, and dealers throughout the world.

Resist deadly heat and friction

VEEDOL

Motor Oils and Greases



1. Remove drain plug. Allow old contaminated oil to run out. Replace plug.

2. Pour in 1 quart of Veedol Oil designated for your car on the Veedol Chart

3. Run motor slowly on its own power for 30 seconds to cleanse interior.

4. Refill to proper oil level. Test your car. Note the snappy pick-up and new power.

This Spring—Give your car Veedol Crankcase Service

Goods With a Reputation

The following from the "Christian Herald" voices an important principle regarding advertising:

"Everything costs so much!"

We hear it on every side. More than ever we must spend with care—must make our money go as far as possible—must know what we are getting.

We do this when we buy goods with a name—goods with a reputation—advertised goods.

Advertised goods are standardized. The maker's name or trademark is a bond of quality. He must live up to the claims he makes or he can not continue to advertise, because;

(1) People will not "come back" for more.

(2) Publications that value their readers' interests will not accept his advertising.

When you buy goods advertised in your state farm weekly you are practicing true economy. The advertiser stands back of them to see that you are satisfied; and we stand back of the advertiser.

Believing that it will pay you to write our advertisers for additional information we kindly ask that you add a line to the effect that you saw their advertisement in the Washington Farmer.

Please mention THE WASHINGTON FARMER when writing advertisers.

This 50th Anniversary Catalogue Is Yours Free—for the Asking

This Golden Jubilee Catalogue is your 1922 guide to correct prices. It sets the low price standard for America, and tells you how little you need to pay for everything you buy. One copy is yours, entirely Free. You only need fill in the coupon below.

Do You Know the New Low Prices?

Do you know how little you should pay for everything you buy? Do you know today's correct low prices?

This book is a price standard. Every price is based upon the new costs of production, upon today's cost of new, fresh merchandise.

Twenty-five million dollars' worth of new, fresh merchandise has been bought and is being made for this catalogue. We have no big stocks of left over goods bought at high prices. Everything in this book is new—everything of latest style—everything fresh — everything offered at today's lowest possible prices.

Everything for the Home, the Farm and the Family

Everything that goes into the home to make it more modern and complete, from wall paper to curtains, lighting fixtures to rugs—everything at Money-Saving Prices.

For Women: All the newest and best New York Fashions—selected by Ward's own New York fashion experts.

For Men and the Farm: Everything a man needs from clothing to tools—everything for the farm and the farmer's use. Everything at guaranteed lowest prices of the year.

Montgomery Ward & Co.
Chicago, Fort Worth, St. Paul, Kansas City, Portland, Ore.

Clip the Coupon Now—Mail it Today

You can not realize how *low* these prices are till you see this book—until you see the pictures, read the descriptions and compare the prices.

We want you to have this book. We want the readers of this magazine who do not buy at Ward's to know how much they can save, to learn the pleasure and satisfaction of always getting dependable goods—of always getting a Golden Rule deal every time they buy.

We want you to learn the new-old spirit of Ward's—progressive, forward looking, alert to give you better service, and bigger and bigger values. So we offer you one copy of this Golden Jubilee Catalogue FREE—You simply need to fill in the coupon below.

Bitter Milk

We have a cow that gives bitter milk and cream. We feed her mill run, mangels, beets and a little alfalfa meal. What is the matter? E. H.

Tacoma, Wash.

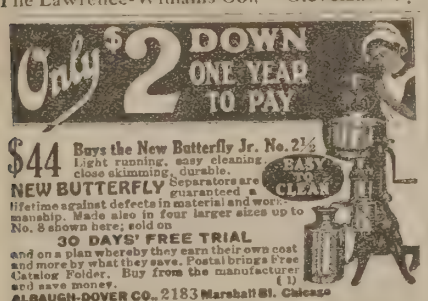
Holding the cream too long at low temperatures bfore churning is the most important cause of bitter cream and butter. Certain bacteria brushed from the cow's udder into the milk cause the bitter flavor. These bacteria grow well at low temperatures, while the lactic type, that we count on to crowd out the undesirables, does not develop well at low temperatures. The remedy is to store the cream at a temperature of about 65 to 70 or even 75 degrees at this time of the year, and then churn often. Using a good lactic acid starter (sour milk of clean flavor) will help to get the right flavor.

A. B. N.

Decrease in Milk Flow

I have been feeding my fresh cows mill run and rolled oats, about equal parts. I have been soaking the grain in water, about 12 hours before feeding, and one of my cows has failed quite a bit in her flow of milk. Would the wet mash cause this decrease? Ten of my cows have been fresh about two weeks, the other nine seem to be doing fairly well. This cow is a hearty eater and eats the wet mash well. We have changed lately to the same amount of dry feed, but haven't had time to see how she will be. This cow's udder seems to be hard on one side after milking. Would that cause her to fail in her milk? B. H.

Chewelah, Wash.



It is not likely that the wet mash has caused this decrease in the milk flow. However, you will get just as good results by feeding the grain dry rather than wet.

The after effects from calving may be the cause. Look to see if the cow cleaned well. Also see that she has plenty of the right kind of feed. Does she get plenty of good hay and succulence? During cold weather it is common for cows to drop off in milk because they do not drink enough water. Cows will not drink as much water as they need when the water is ice cold. This will cause a decided drop in the milk flow. Water at about 60 degrees is the best.

The lump in the udder is probably due to lack of circulation. If ordinary massaging will not remove it in a few days it would be well to call in a veterinarian. Better feed, better care and a well-bedded box stall for a few days will go a long way toward bringing the cow back to normal. A. B. N.

VETERINARY

By DR. S. B. NELSON.

Many readers of this department have forgotten our rule not to answer questions unless the writer signs his or her name and gives postoffice address. Occasionally questions have been answered when the inquirer signed initials only, but this will not be done in the future. The name will not be published if given confidentially, but THE FARMER must know with whom it is dealing.

Horse Rubs Hair Off.—I have a mare that rubs the top of her neck and her tail against the limbs of trees or fence posts. H. M. S.

Olympia, Wash.

Try treating the parts that she rubs once daily or every two or three days with a solution of corrosive sublimate, 1 to 1000 parts in a little water. Give it a good soaking. This is poisonous, so should be kept from children and animals.

Milk Is Strong.—We have a cow coming 6 years old and when she gets five months along with calf her milk gets strong. At first it seems to be the cream, but when she gets about seven months along the milk is strong, too. A READER.

South Tacoma, Wash.

Give your cow a handful of epsom salts in a suart of water once daily for a few days and see if that will help.

Lumpy Jaw.—I have a good heifer that will be fresh in six weeks. She has a hard bunch on her jaw. If it is lumpy jaw, can she be used for milking or beef? H. S.

Plaza, Wash.

The disease is probably lumpy jaw. If the disease has not affected the jaw very long and has not broken and is rather loose from the jaw, it probably can be cured by removing the tumor and giving the wound daily treatment with iodine. I wish, however, to say that the disease is very infectious and if you have any other cattle it might be well to sacrifice this animal than to allow her to go along and scatter the germs of the disease.

Pink Cream.—Can you tell me why our Jersey cow's cream becomes pink in color after it sets for two or more days? She freshened May 28. She is on clover and brush pasture and we feed her about one gallon of millrun a day and some grass and clover mixed hay. She seems to be in good health. There is lots of alkali in the water. Could that be the cause? MRS. M. H.

Napavine, Wash.

The pinkness in your cow's milk is caused by a bacterial infection. Wash the udder out with a 2 per cent solution of boracic acid. This should be boiled and cooled and the end of the teat dipped in iodine before being used. The surgical instruments should be thoroughly sterilized.

Treat Udder.—I have a cow that lost her calf ahead of time. I found her after it had been raining for several days and she could hardly walk. She gave very little milk at first, but increased to a quart later. One quarter of her udder is hard and I can get only a few drops of milk out of it. The cow has no appetite. F. S.

Kalama, Wash.

Treat the hard quarter of the udder by bathing night and morning with hot salt water. Gently rub and apply the following liniment with a little friction: Fluid extract of belladonna, one ounce; fluid extract of poke root, one ounce. She should be milked three or four times daily. To bring back her appetite a tablespoonful of compound tincture of gentian will probly be of value.

Might Be Mange.—1. I have a cow that scratches her head and licks herself when I turn her out of the barn in the morning. I have looked for lice, but can not find any. She has a few little scabby spots somethings like dandruff. 2. What will cure warts on cows' teats? MRS. C. S.

Arlington, Wash.

1. It may be that your cow has some form of mange. You might try for a little while the application of an ointment made of sulphur and petroleum, making it semiliquid and applying it once every four or five days. From two to four applications should be sufficient. 2. For warts on cows' teats the following prescription should be carefully used night and morning: Chloral hydrate, one and one-half drams; acetic acid absoluate, one and one-half drams; salicylic acid, one dram; spirts of ether, one dram; colodion, four drams.

To win a race a Jockey doesn't put extra weight on the horse that helps him succeed

No man or woman who wants to succeed in the race of life can afford the handicap of headaches, insomnia, indigestion and debility. Nor can they afford to take anything that may keep up a continual irritation of the nervous system.

Yet this is what many people do who drink excessive amounts of tea or coffee. For tea and coffee contain caffeine, a substance that is sometimes very injurious. Many doctors say that caffeine raises the blood pressure, irritates the kidneys and over-stimulates the entire nervous system. Also that it is especially bad for growing children, or for any one who has any tendency to nervousness or insomnia.

If you want to avoid a possible cause of headache, insomnia, or nervousness, it might be well to stop taking tea and coffee for awhile, and drink rich, satisfying Postum, instead.

Postum is a delicately-roasted, pure cereal beverage—delicious and wholesome.

Order Postum from your grocer today. Drink this fragrant, healthful beverage for awhile, and see if you will not feel brighter, more active, and more resistant to fatigue—as so many thousands of others have felt.

Postum comes in two forms: Instant Postum (in tins) made instantly in the cup by the addition of boiling water. Postum Cereal (in packages of larger bulk, for those who prefer to make the drink while the meal is being prepared) made by boiling for 20 minutes.

Postum *for* Health

Oil Light Beats Electric or Gas

Burns 94% Air

A new oil lamp that gives an amazingly brilliant, soft, white light, even better than gas or electricity, has been tested by the U. S. government and 35 leading universities and found to be superior to 10 ordinary oil lamps. It burns without odor, smoke or noise—no pumping up, is simple, clean, safe. Burns 94% air and 6% common kerosene (coal oil).

The inventor, W. W. Johnson, 31 N. Fifth St., Portland, Ore., is offering to send a lamp on 10 days' FREE trial, or even to give one FREE to the first user in each locality who will help him introduce it. Write him today for full particulars. Also ask him to explain how you can get the agency, and without experience or money make $250 to $500 per month.—Adv.

LIFE PRESERVERS FOR LIVE STOCK

By DR. E. E. WEGNER, W. S. C.

INFECTIOUS DISEASES, ARTICLE 2.
How Bacteria Are Transmitted. Vaccines, Serums, Etc.

Two terms are frequently used to mean the same thing when in reality they do not mean the same. These terms are infectious and contagious. The first refers to any disease that is caused by a specific organism, regardless of the nature or capabilities of that particular one. The term contagious refers to the manner of transmission of the organism from one susceptible animal to another. That is, if the organism is readily transmitted from one animal to another the disease is said to be very contagious; if, however, it is transmitted with difficulty from one to another it may be said to be only slightly contagious. In the case of the influenza epidemic of three years ago the organism spread very rapidly from one person to another and we would classify such a disease as very contagious. Glanders in horses is contagious, but the spread through a group of horses is comparatively slow and not to be compared with influenza of horses.

Certain other diseases are caused by specific organisms, but those organisms are not transmitted directly from one animal to another, these are infectious, but not contagious. Tetanus, or lockjaw, is infectious, but there is no danger of its spreading through a group of animals, so it is not contagious. The organism may be thrust into the tissues of the body by a dirty nail and a serious illness may result, but other animals do not need to fear that they will suffer from association with the diseased one.

Contagious diseases are infectious, but all infectious diseases are not contagious. In the discussion of the various diseases that will follow the habits of the causative organism will be discussed, as it is only in that way that an efficient means of preventing these diseases can be established.

Vaccines.

It is well known that certain diseases will attack an animal only once, and that if the animal recovers it need not fear a second attack. The reason for this is, briefly, that there is stored up in the animal's body certain substances that will neutralize the poison of the particular organism that causes that disease, so that if that organism should again enter the system of that animal it could do no harm. This fact has been made use of in the treatment of animals and man to reduce the loss from certain diseases, and it has been quite effective against those diseases that attack the body only once. In such cases the organisms causing the particular disease, or a very similar one, are subjected to a treatment that nearly kills them or so reduces their vitality that they are no longer dangerous or capable of producing a serious attack of the disease that they represent. These weakened organisms are then injected in small numbers only and the manufacture of the protective substances immediately takes place within the body. The animal recovers from this mild attack, but during it there has been produced the protective substances which remain as long as the animal lives to protect it against similar invasions from any source in the future. If these vaccines have been properly produced the value of them is very great and the dangers very small. The most common one in use today is the blackleg vaccine, which is of immense value to the live stock industry, and has saved many animals from this fatal disease.

Serums.

Immune serums are sometimes used in the treatment of animals that are suffering from certain infectious diseases, but, unlike the vaccines, they are to be used after the animal becomes sick, while the vaccines are to be used while the animal is still in good health. The vaccines are preventive, while the serums are curative. The serums are made by giving a susceptible animal a small dose of a vaccine until it produces its protective substances; it can then be given a larger dose and it produces a greater amount of this substance, increases doses are given until the animal has a very great amount of this protective substance in its blood. If this blood is then withdrawn and the fluid part injected into an animal that is suffering from that particular disease the injected fluid neutralizes the poison of the organism in the system and an improvement may be quickly apparent. In certain diseases this method has been very valuable in the treatment of the sick.

All of these factors will be considered in the discussions of infectious diseases that are to follow.

MAKE NO SUDDEN CHANGES.

If you have to change your ration, no matter what particular live stock you are feeding, make the change as gradually as possible.

More Milk—Better Milk
—and Less Labor

That's what Star Equipment does for the dairyman. On top of increasing his profits from the herd, it keeps the cows healthier, betters milk quality—increases the yield and cuts down work for you and the hired hands.

The experience of dairymen who have housed their herds the old way and changed to the Star way proves every claim we make is true. If anything we're understating rather than exaggerating.

Investigate. It doesn't cost anything to look into Star Equipment and what the experience of other dairymen will show you will open your eyes to the profits it holds for you.

United States patents protect the exclusive features that put Star Barn Equipment in a class by itself—you will find these advantages in no other brand. For instance, the Unit System which enables you to add stalls as your herd grows—the Star Alignment Device which keeps bedding and stalls clean and lessens labor—the Star Curb Clamp which cuts down installation cost—these and many other features you would not be without are exclusive with Star.

In the Star Line, you'll find more than merely Steel Stalls and Stanchions—everything for the barn, inside and out, is there: Water Bowls, Pens, Ventilation Systems, Litter and Feed Carriers as well as Harvester Hay Tools, Cannon Ball Door Hangers, Hoghouse Equipment, Garage Door Fixtures and a world of other farm specialties.

Our 348-page bound catalog, profusely illustrated in colors, is free if you'll write for it and tell us when you're going to build a new barn or remodel your old one. Our Plan Department is at your service, free. Use the coupon for plans. Write for the catalog.

THE AUTO-OILED AERMOTOR

A Real Self-Oiling Windmill

A year's supply of oil is sent with every Aermotor

Oil an Aermotor once a year and it is always oiled. Every moving part is completely and fully oiled. A constant stream of oil flows on every bearing. The shafts run in oil. The double gears run in oil in a tightly enclosed gear case. Friction and wear are practically eliminated.

Any windmill which does not have the gears running in oil is only half oiled. A modern windmill, like a modern automobile, must have its gears enclosed and run in oil. Dry gears, exposed to dust, wear rapidly. Dry bearings and dry gears cause friction and loss of power. The Aermotor pumps in the lightest breeze because it is correctly designed and well oiled. To get everlasting windmill satisfaction, buy the Aermotor.

POULTRY

A Little Planning

Sometimes a very little planning will change things about a chicken house so the hens will begin to lay. Proper egg-producing feed is necessary, of course, but if hens are allowed to run out in the damp and cold weather they are not likely to produce many eggs.

It is not necessary to have a very fancy house for hens, but a scratching shed light and dry, adjoining the roosting and laying room is very profitable and can be nailed up in a little while out of almost any lumber one happens to have. It should have a sunny exposure if possible and be enclosed on three sides with boards. The fourth can have glass if you happen to have some old window sash. Many times old sash can be picked up cheap at a place where material from wrecked buildings is sold. If one can't get window sash wire will do very well.

The roof should be water-tight so as to keep the ground dry and straw should be kept on the grund and the grain scattered in it so the hens must scratch for it. It is surprising how fine they will work up the straw in a week. The straw should be taken out when it becomes very fine, as by that time it is foul and will make a splendid top dressing for the garden.

Always send your hens to bed with full crops, but make them work for their grain in the morning.

One Way to Sprout Oats

I am sending my way of sprouting oats for laying hens. I use four butter boxes, or those similar. I soak 12 quarts for 190 hens in a gunnysack over night or all day, but not longer. They say the right way is 18 hours, but I don't see that it makes much difference if they soak a little longer. I have a small barrel into which I put the gunnysack and the water must be changed every morning, as it gets stagnant. I take out the sack and let drain and put the oats into the butter box and keep this up till I have four boxes filled and by the time the fourth is placed for sprouting the first one is ready to feed. The sprouts should be only about one-eight of an inch long, but if they get longer it doesn't hurt them. They must be sprinkled and stirred up each morning while in the boxes. I take them out on the porch to do this and allow them to drain when it is warm enough, but if too cold I do it in the house and wipe up the water that drains out.

I am fortunate in having room enough for the boxes behind my range, which makes a warm place for the oats to sprout. They must be in a warm place to hasten the sprouting. I keep my little soaking barrel in the house and my sack of oats in the pantry, so as to have them handy; they are not very ornamental, but very convenient. One might think this hard to do, but it isn't for one who wishes to help along and I can do all I have to do about it in 15 minutes every morning. If one can afford to buy a regular sprouter it is, of course, the best.

MRS. W. J. HUDSON.
East Stanwood, Wash.

Plan to Feed Cockerels

A plan to feed several thousand cockerels as they are separated from the pullets in the spring has been outlined by the Lynden and Bellingham branches of the Washington Cooperative Egg and Poultry association. In this section of the state the poultry flocks are more numerous and the local markets are well supplied when the male birds from the many brooding houses, where the baby chicks are raised, have attained sufficient size for table use. The association tried out their plan of feeding the birds in large quantities and dressing them for the market with good results, but it was found necessary to freeze the meat before shipping. In this way shipments were made as far east as New York, arriving in perfect condition.

The association plans to build more room onto the plant at Lynden and erect a building for the purpose at Bellingham. It will be necessary, however, to limit the daily supply of birds from the producers, because of insufficient room for feeding.

Get the Coops Ready

It is a good plan to look over the coops where you will want to put your hens when they come off with their broods. Too often an old barrel is turned down and a few stakes driven into the ground in front of it and the poor hen is kept in there for a month or more. This is not only cruel, but very poor management, as the hen has been sitting for weeks and has no chance for exercise or for a dust bath, and the latter is very necessary to keep her free from mites. One should always place a hen on clean, dry ground when taken from the nest and in the early spring when the weather is cool she should be placed where the sun will shine into the coop. The old-fashioned "A" coops are as good as any and easy to make. It is best to have the back of the coop entirely closed so as to keep the wind out.

Keep Only Profitable Fowls

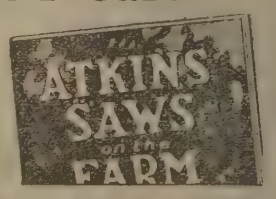
Now is the time to be looking over your flock and to kill off for market or your own use all those hens which are to old or small or for other reasons are not profitable to keep. And it is also time to thin out the cocks if you have more than one for each group of 10 hens. This should be done in the fall, but if it has been neglected the sooner it is done now the better, as every day counts when you are feeding fowls which are unprofitable to keep.

Every home should have a few jars of canned chicken on hand as it is so convenient to have a supply to draw from and it is as simple a process to can chicken as fruit. If you are far from a market you can stop the expense of feeding by canning.

MILK AND MEAT FOR POULTRY.

When milk, either sweet or sour, is fed to poultry the proportion of meat in the mash or in other forms may be considerably reduced. In fact, it can be largely eliminated if all of the milk that the hens will eat is given them. Sour milk is to be preferred to sweet milk for poultry feeding. It is even considered unwise to feed the partially sour, or "blink" milk, since it has a tendency to complete its souring process in the fowl's crop or stomach, thus interfering with the digestive process.

ECONOMY IN FEEDING.



There is no question that poultry need a wide variety of feed in their bill of fare. There is a limit, however, to the degree to which this varied bill may be carried. Profit is what the poultryman is after, and when his feed cost exceeds his income he can get little enjoyment out of the fact that he gave his birds an exceptional ration. A middle ground in feeding is best for the average producer.

Plants Asleep

Awaken Slowly From Winter Rest

By O. M. MORRIS,
Head of Department of Horticulture, State College of Washington.

The common fruit trees have a normal rest period and are dormant during the early part of the winter. During the latter part of the winter they gradually awaken and the first evidence of growth is noted in the swelling of the buds.

The date at which the trees come into blossom is modified most by two conditions.

The trees that go into winter quarters or become dormant first in the fall are the ones that ordinarily start growth first in the spring. This statement is true particularly in comparing different trees of the same variety. Trees of different varieties or species can not be compared so well with each other.

The other factor that influences the date at which trees come into blossom is the amount of heat to which they are exposed during the middle and latter part of the winter.

The plant contains in the branches and trunk enough stored food to put out its blossoms without any growth taking place, and the placing of mulch or material over the soil to keep it cool and prevent root action is more liable to do harm to the trees than any good and it can not in the least modify the date at which the trees will come into blossom.

Whitewashing the trunk and branches of the tree and keeping them perfectly white during the winter and spring will sometimes delay the blossoming period. In order for this to be effected, however, the whitewash must be applied early in the winter and kept white until blossoming time in the spring.

Mulching the soil to keep it cool will retard root growth and is liable to cause the trees to suffer for plant food that should be gathered by the roots early in the spring.

Fruit Trees

Choose Best Producing Varieties

"There are many trees in western Washington that are not bringing in a profitable return merely because they are not the varieties that are best suited to our climatic conditions," said Charles L. Robinson, head of the division of horticulture of the state department of agriculture in a recent talk before a group of farmers. "No matter whether one is going into the commercial orchard business or merely planting a few trees for home use, they should be varieties that will produce the greatest returns. No one can afford to 'board a fruit tree' any more than he can afford to feed a cow that does not pay for her feed.

"If I were to recommend varieties of fruit trees for this western Washington section I would list them as first and second choice as follows:

"**Apples**—First choice: Yellow Transparent, Gravenstein and Northern Spy. Second choice: Winter Banana, King, Glowing Coal and the Golden Russet.

"**Pears**—First choice: Bartlett, Bosc and the Anjou. Second choice: Anjouleme, Fall Butter and Flemish Beauty.

"**Plums**—First choice: Any of the Reine Claude group, and Green Gage. Second choice: Bradshaw, Peach, Columbia, Coe's Golden Drop and the Blue Damsen. The Italian and French prunes do well in some parts of the Pacific coast, yet not so well in the central and northern section of the state as they do in the southern.

"**Sweet Cherries**—Bing, Lambert and Royal Anne. The Long Stemmed Waterhouse should be used as a pollenizer for best results. It is much like the Royal Anne.

"**Sour Cherries**—First choice; Mount Morenci and English Morello. Second choice: Early Richmond, Wragg, Late Duke and May Duke.

"**Grapes**—Island Belle, Moore's Early and Campbell's Early.

Raspberries—Cuthbert, Antwerp, Marlboro, and King. Blackcaps are profitable in western Washington, but they are subject to disease.

"**Strawberries**—Marshall, Clark's Seedling, Goodell and Gold Dollar."

IT KILLED THE WILLOWS.

To the Editor: In The Washington Farmer of December 29 U. G. Frantz of Outlook, Wash., gives a method of killing willows. I saw the same item in another farm paper in 1901 and tried it out. The item said to cut with a scythe the next spring, but there wasn't a willow to be seen. The same thing works on alder and a lot of other brush.—W. F.

The method to which the writer above refers was given in the words of Mr. Frantz as follows: "An irrigation lateral runs through my farm and in the early years it became badly infested with willows. I got rid of them with practically one cutting. I took my pruning shears, having two-foot handles, and cut off everything close to the ground, leaving no stubs, but digging nothing. Every time you break a willow root you have two sprouts. One cutting in July and one in August will clear them up. Treat the few that come again the same way in the fall or following summer."

To Reclaim 15,000 Acres

Plans have been adopted by Brewster and Pateros whereby an irrigation system for the two towns and vicinity can be furnished water at an estimated cost of $80 an acre, eliminating the Methow-Okanogan irrigation plan approved by the state to irrigate the same lands at a cost of $300 an acre. Brewster and Pateros will share the expense of construction equally.

The main system without the laterals will be approximately 25 miles long, and will reclaim over 15,000 acres.

Spray for Profit

Big crops of high grade fruit come only from clean well kept trees. Thoro spraying is absolutely essential. Adequate spraying equipment is of first importance. For best results, use one of the famous

"Bean" Power Sprayers

High pressure outfits noted for their porcelain-lined cylinders, ball valves, patented pressure regulator, absence of stuffing boxes and stuffing box troubles, and many other superior features. Made in a full range of sizes. Send the coupon and get all the Bean facts.

$200 Cut in Titan Price

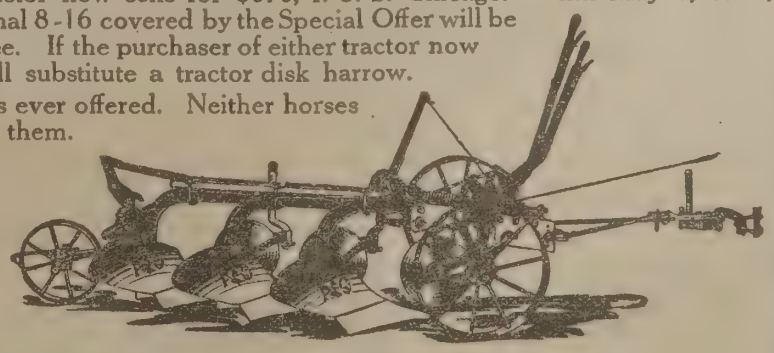
Now $700 f. o. b. Chicago

—and a P & O 3-furrow Plow FREE

Harvester Company's Exceptional Offer
Effective Feb. 3, to May 1, 1922

The Harvester Company makes this special offer to apply on all new International 8-16 and Titan 10-20 tractors purchased by its dealers on 1922 account: Each farmer purchasing one of these Titan tractors, for delivery on or before May 1 next, will be given by the Company ***absolutely free,*** f. o. b. Chicago, a 3-furrow P&O plow. On the same terms, each farmer who purchases an International 8-16 will be given a 2-furrow P & O plow.

THE Titan is not a stripped tractor, pared down to make a price, but complete with all essential equipment—***friction clutch pulley, fenders, platform, throttle governor, adjustable drawbar, angle lugs, brakes.*** This equipment, worth more than $100 and necessary on any tractor to make it serviceable and safe, is included in the new $700 price. ***No extras to buy.***



The Titan is a real 3-plow tractor and has belt power in proportion. It has enormous reserve power. Its 3-plow capacity cuts the labor cost on every field operation—a big item in farm operating expense. Titan is famous for long life. It has proved in eight years of use that it outlasts two or three small inferior tractors. Does best work on cheap kerosene. Low repair and upkeep expense. Always on the job.

$230 Cut in International 8-16

The International 8-16 tractor now sells for $670, f. o. b. Chicago. Until May 1, 1922, each purchaser of an International 8-16 covered by the Special Offer will be given a P & O 2-furrow plow free. If the purchaser of either tractor now owns a suitable plow we will substitute a tractor disk harrow.

Greatest farm power values ever offered. Neither horses nor any other tractor can equal them.

Special Offer Expires May 1st. See the McCormick-Deering Dealer Now!

Pigs Raised on Farms

Pigs were raised in 1919 on 3,161,100 farms, or 49 per cent of all farms in the United States, according to the fourteenth census. The total number of pigs raised was 62,083,392, an average of 19.6 per farm.

Six states reported more than 3,000,000 pigs raised on farms in 1919, as follows: Iowa, 8,804,746; Illinois, 5,364,756; Indiana, 4,646,894; Missouri, 4,484,884; Ohio, 3,989,970, and Nebraska. 3,335,006.

There were 226,839 pigs on the farms of Montana in 1919, 263,610 on the farms of Idaho, 258,944 on the farms of Oregon and 301,767 on the farms of Washington.
